Crossroads-World. HYPOTHESIS

TEAM	

For each option H1-2 (hypothesis) mark the selected option (a, b, c ...).
Hypotheses do not depend on human actions, hence they cannot be modified throughout the game!

HYPOTHESIS

H1: Availability of non-renewable energy resources (oil, coal, natural gas and uranium):

a) "Peak of non-renewable energy resources" (medium availability according to literature)
b) "Peak of non-renewable energy resources" (high availability according to literature)
c) No significant restrictions to extraction during the simulation period
d) Disaggregated response by type of fuel (complete table below)

	"Peak of non-renewable energy resources" (average availability according to literature)	"Peak of non-renewable energy resources" (high availability according to literature)	No significant restrictions on extraction during the simulation period
Coal			
Oil			
Natural gas			
Uranium			

H2: Damages produced by climate change:

a) Not significant before 2060
b) Significant before 2060 (ability to restrict economic growth in standard economic scenarios, see T2)
c) Very significant before 2060 (ability to create a recession in standard economic growth scenarios, see T2)
