Figure S1. An additional test of specificity of the newly designed primer pair for *Candidatus* Liberibacter asiaticus (*C*Las). (a) PCR assay with primer pair *C*Las-295F/R. (b) The nested PCR with universal primer pair P1/16S-Sr followed by the nested primer pair R16F2n/R16R2. Lane 1: *C*Las-infected Wentan pomelo; lane 2: Taiwan citrus symptomless (TCS) phytoplasma (16SrII)-infected Wentan pomelo; lane 3: healthy Wentan pomelo. M, 100 bp DNA ladder (GeneDireX).
