In the original publication [1], there was a mistake in the legend for Figure S1b as published. The temperature was incorrectly stated as 4 °C; the correct value is 25 °C. The correct legend appears below.

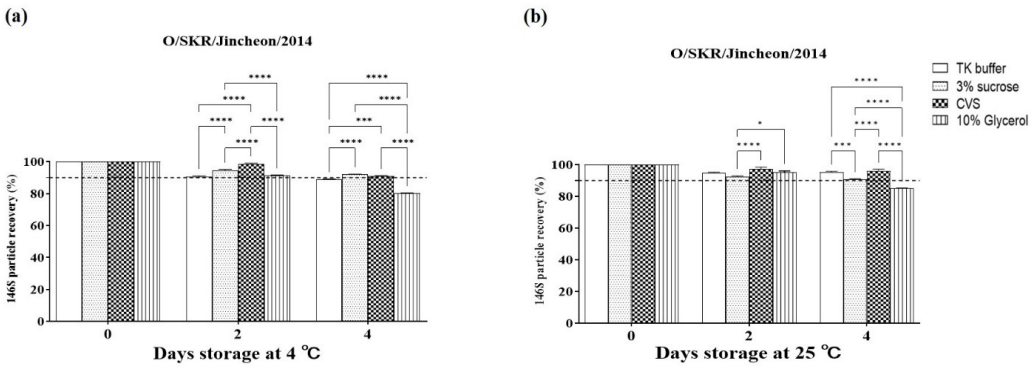

Figure S1. Short-term stability of O/SKR/Jincheon/2014 antigens formulated with different stabilizers. O/SKR/Jincheon/2014 antigen containing 20 µg/mL of 146S antigen was formulated with the indicated stabilizers and stored in liquid form at (**a**) 4 °C or (**b**) 25 °C for up to 4 days. The 146S antigen concentration was determined by measuring absorbance at 259 nm using a spectrophotometer. The recovery rate of 146S antigen was calculated at each time point by comparing the antigen content after storage with that measured before storage, according to the following equation:

Recovery (%) = (146S antigen content after storage/146S antigen content before storage) × 100

Data are presented as the mean ± standard deviation (SD) of three independent experiments ($n = 3$). Statistical significance was assessed using two-way analysis of variance (ANOVA) followed by Tukey's multiple-comparisons test. The dotted line indicates 90% antigen recovery. * $p < 0.05$, ** $p < 0.01$; *** $p < 0.001$, and **** $p < 0.0001$.

The authors state that the scientific conclusions are unaffected. This correction was approved by the Academic Editor. The original publication has also been updated.
