

## Supplementary information

### Supplementary Materials and Methods

#### *Generation of genome-edited cell line by CRISPR-Cas9*

In order to disrupt Pyruvate Dehydrogenase E1 Subunit Alpha 1 (PDHA1), CRISPR-Cas9 mediated genome editing was applied as previously described [25]. In brief, Cas9 and single guide RNAs (caccGATGCAGACTGTACGCCGAA and aaacTTCGGCGTACAGTCTGCATC) were simultaneously expressed using the PX458 plasmid by transient transfection using Xtremegene [26]. Transfected cells were FACS sorted and single cells were expanded. Analysis of resulting clones was done by western blotting using the following antibodies: Pyruvate Dehydrogenase (3205S; Cell Signaling Technology), glyceraldehyde 3-phosphate dehydrogenase (GAPDH) (MAB374; Merck Millipore) (Figure S1).

#### *Generation of GLS over-expressing A549 cells*

cDNAs of glutaminase (GLS) or GLS<sup>S482C</sup> (UniProt O94925, isoform 1, also known as GLS1 or KGA) were amplified by polymerase chain reaction (PCR) using the pcDNA5/FRT/TO vector as previously described and the primers aaaaaagcaggcttcggtggtatcccGCGGCATGATGCGGCTGCGAGGCTCGGGGA and aaagctgggtcggtcggtcggtcATTACAACAATCCATCAAGATTCTT [18]. The cDNAs were cloned into pEntry and shuttled to pInducer20 using standard gateway cloning [27]. A549 cells were infected with lentiviruses made with the GLS-encoding pInducer20 constructs and selected with G418.

#### *Organoid culture*

The study was approved by the responsible local ethics committees (Institutional Review Board of the University Medical Center Utrecht (STEM: 10-402/K; TcBio 14-008; Metabolic Biobank: 19-489, active since 05-06-2020). All biopsies were used after written informed consent. Intrahepatic cholangiocyte organoids were established and cultured as described previously [28]. Liver biopsies were cut into small pieces and digested using 10 mg/ml Collagenase D (Sigma Aldrich) in Hanks' Balanced Salt Solution (HyClone, Thermo Fisher Scientific) for 20 min at 37 °C. Digested samples were then diluted and washed with cold GF-(without growth factors) (Advanced DMEM/F12 (Gibco) supplemented with 2 mM GlutaMAX (Gibco), 10 mM HEPES (Gibco), 100 U/ml Pen-Strep (Gibco) and centrifuged for 5 min, 4 °C at 300 g. The cell pellet was plated in basement membrane extract (BME) (Bio-technique) and culture medium was added. Culture medium was based on Advanced DMEM/F12 supplemented with 2 mM GlutaMAX, 10 mM HEPES, 100 U/ml PenStrep, 2 % B27 without vitamin A (Gibco), 10 mM Nicotinamide (Sigma Aldrich), 1.25 mM N-Acetylcysteine (Sigma Aldrich), 10 % R-Spondin 1 (RSPO1) conditioned media (homemade), 10 nM Gastrin (Tocris), 50 ng/ml epidermal growth factor (EGF) (Peprotech), 100 ng/ml FGF10 (Peprotech), 25 ng/ml hepatocyte growth factor (HGF) (Peprotech), 50 µg/ml Primocin (InvivoGen), 5 µM A83-01 (Tocris), and 10 µM Forskolin (Tocris). For the first 3 days in culture, the medium was supplemented with 30 % Wnt conditioned media (homemade), 25 ng/ml Noggin (Peprotech), and human embryonic stem (hES) cell cloning recovery solution (Stemgent). The medium was changed every 3–4 days and organoids were passaged 1:4–1:8 each week.

### Supplementary tables

**Table S1.** Medium used for isotope tracing experiments

Cell line	Medium
HEK293T-WT	DMEM, no glucose and no sodium-pyruvate (ThermoFisher Scientific) 1 % P/S (v/v) and 25 mM D-Glucose ( <sup>13</sup> C <sub>6</sub> glucose, 99%, Cambridge Isotope Laboratories, Inc.)
HEK293T-PDHA1-/-	

A549-WT	RPMI 1640 medium, no glutamine (ThermoFisher Scientific), 1 % P/S (v/v) and 2 mM <sup>13</sup> C <sub>5</sub> Glutamine (99%, Cambridge Isotope Laboratories, Inc.)
A549::pIND_GLS	
A549::pIND_GLS <sup>S482C</sup>	RPMI 1640 medium, no glutamine (ThermoFisher Scientific), 1 % P/S (v/v) and 2 mM <sup>15</sup> N <sub>2</sub> Glutamine (98%, Cambridge Isotope Laboratories, Inc.)

**Table S2.** Composition of the internal standard working solution

Standard	Concentration
<sup>15</sup> N <sub>2</sub> - <sup>13</sup> C glycine	100 μM (Cambridge Isotope Laboratories, Buchem b.v., Apeldoorn, The Netherlands)
<sup>2</sup> H <sub>4</sub> alanine, <sup>2</sup> H <sub>3</sub> leucine, <sup>2</sup> H <sub>3</sub> methionine, <sup>13</sup> C <sub>6</sub> phenylalanine, <sup>13</sup> C <sub>6</sub> tyrosine, <sup>2</sup> H <sub>3</sub> aspartate, <sup>2</sup> H <sub>3</sub> glutamate, <sup>2</sup> H <sub>2</sub> ornithine, <sup>2</sup> H <sub>2</sub> citrulline and <sup>2</sup> H <sub>4</sub> - <sup>13</sup> C arginine	20 μM (Cambridge Isotope Laboratories, Buchem b.v., Apeldoorn, The Netherlands)
<sup>2</sup> H <sub>9</sub> carnitine	6.08 μM (Cambridge Isotope Laboratories, Buchem b.v., Apeldoorn, The Netherlands)
<sup>2</sup> H <sub>3</sub> acetylcarnitine	1.52 μM (Cambridge Isotope Laboratories, Buchem b.v., Apeldoorn, The Netherlands)
<sup>2</sup> H <sub>3</sub> palmitoylcarnitine	0.608 μM (Cambridge Isotope Laboratories, Buchem b.v., Apeldoorn, The Netherlands)
<sup>2</sup> H <sub>3</sub> propionylcarnitine, <sup>2</sup> H <sub>3</sub> butyrylcarnitine, <sup>2</sup> H <sub>9</sub> isovalerylcarnitine, <sup>2</sup> H <sub>3</sub> octanoylcarnitine, <sup>2</sup> H <sub>9</sub> myristoylcarnitine	0.304 μM (Cambridge Isotope Laboratories, Buchem b.v., Apeldoorn, The Netherlands)

**Table S3.** DI-HRMS-BIT library depicting the assigned HMDB names and corresponding adducts with m/z values used to annotate mass peaks derived from DI-HRMS in positive and negative ion modus.

#### Supplementary Figures

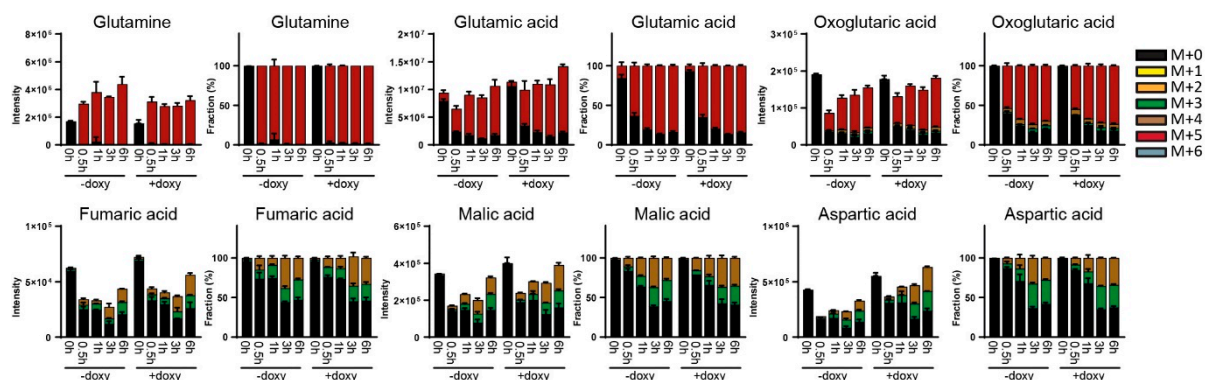

**Figure S1.** Western blot analysis of total lysates from wild type and PDHA1<sup>-/-</sup> HEK293T cells.

**Figure S2.** Targeted profiling of indicated metabolites in wild type and PDHA1 deficient HEK293T cells cultured in the presence of  $^{13}\text{C}_6$  glucose for 0 h, 1 h, 3 h, 6 h and 24 hours.

**Figure S3.** Total (labeled and unlabeled) intensity and fractional enrichment of glutamine in medium after 0 h, 1 h, 3 h, 6 h and 24 h incubation with  $^{13}\text{C}_6$  glucose in wild type and PDHA1 deficient HEK293T cells. Isomeric compounds for each component are listed in Table S3.

**Figure S4.** Metabolic consequences of overexpression of wild type GLS. Total (labeled and unlabeled) intensity and fraction of TCA cycle intermediates and aspartic acid after 0 h, 0.5 h, 1 h, 3 h and 6 h incubation with  $^{13}\text{C}_5$  glutamine and with/without doxycycline in A549::pIND\_GLS cells. Isomeric compounds for each component are listed in Table S3.
