

**Supplementary Figure S2.** Electrical conductivity (EC) (a and b) and pH (c and d) of drainage of *A. viridis* grown under a soilless culture system versus different EC of the nutrient solutions (CT1, CT2, CT3, and CT4 are 1.5, 2.5, 3.5 and 4.5 dS m$^{-1}$, respectively). The dotted lines indicate the trend in the data in b and d. Different letters indicate significant differences ($p < 0.05$).
