

Synthesis and Applications of Metal-Organic Frameworks (MOFs)

Guest Editors:

Dr. Stephen David Worrall

Aston Institute of Materials
Research, Aston University,
Birmingham, UK

Dr. Julia Linnemann

Junior Research Group Shape-
dependent electrochemistry,
Chair of Analytical Chemistry II,
Ruhr-University Bochum,
Bochum, Germany

Deadline for manuscript
submissions:

20 July 2024

Message from the Guest Editors

Nanoporous metal–organic frameworks (MOFs) have generated huge research interest in a wide range of fields since their discovery at the turn of the millennium. Electrochemical synthesis methods naturally yield MOFs as thin film coatings on conductive substrates, which is hugely advantageous for research into the potential electrochemical applications of MOFs. MOFs in electrical applications, including supercapacitors, battery electrodes, electrochemical sensing and data storage.

In this Special Issue, we seek to discuss the most recent advances both in the electrochemical synthesis of MOFs (including novel methods, adaptations of existing methods and mechanisms behind the different methods) and in their use for any and all electrochemical and electrical applications (as pure MOF, in the form of composites or as a precursor for other porous materials). In this regard, studies addressing how structural and morphological properties of MOF crystals and the respective films they constitute relate to electrochemical performance are also highly appreciated.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo

Dipartimento di Fisica,
Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
