Message from the Collection Editors

Doctoral supervision is a crucial element of the research process for students pursuing a doctorate degree. It involves the development of a close working relationship between student and supervisor, aimed at guiding and supporting the student's academic journey. The role of the supervisor is to provide guidance on research methodology, help the student develop research skills, and provide constructive feedback on the student's work. The ultimate goal is to ensure that the student produces a high-quality thesis that meets the standards of the academic community for their own discipline area.

Effective doctoral supervision requires a strong understanding of the research process, a deep knowledge of the subject matter, and excellent communication skills. The supervisor must be able to provide constructive feedback, whilst also being supportive of the student. Furthermore, the supervisor should also be able to help the student manage their time effectively, as doctoral research can be a lengthy and challenging process that must lead to an original contribution to knowledge in the specific field.
