## Hydrogels for the Regeneration of Joints of the Musculoskeletal System in Orthopedics

Guest Editors:

**Prof. Dr. Benjamin Gantenbein**

Tissue Engineering, Orthopedic Research & Mechanobiology, Department for BioMedical Research (DBMR), Medical Faculty, University of Bern, 3012 Bern, Switzerland

**Prof. Dr. Mohammad Jafar Abdekhodaie**

Department of Chemical and Petroleum Engineering, Sharif University of Technology, Tehran, Iran

Deadline for manuscript submissions:

**30 July 2024**

### Message from the Guest Editors

Hydrogels for the regeneration or repair of tissues of the musculoskeletal apparatus in orthopedic research are of very high translational value. Various tissues of joint and joint-like tissues warrant applications of hydrogels. The best examples are the regeneration of articular cartilage of the knee or of the intervertebral disc (IVD) of the spine. These hydrogels need to be relatively stiff and should be very similar to native tissue in terms of mechanobiological parameters. In orthopedics, there is an urgent need to develop clinically feasible solutions to relieve pain and to restore the function of degenerated tissues such as the spine and other joints such as the rotator cuff of the shoulder. In the last few decades, smart biomaterials have been investigated which could be injected into degenerated IVD to restore disc height. This Special Issue seeks contributions to the field of engineered hydrogels for orthopedic applications that warrant mechanically reinforced properties by cross-linking and other means. These hydrogels will be targeted for cartilage repair and/or IVD, with a special focus on these micro-environments.

## Message from the Editor-in-Chief

*Gels* (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q1 (*Polymer Science*)
