Supplemental Figure S1.

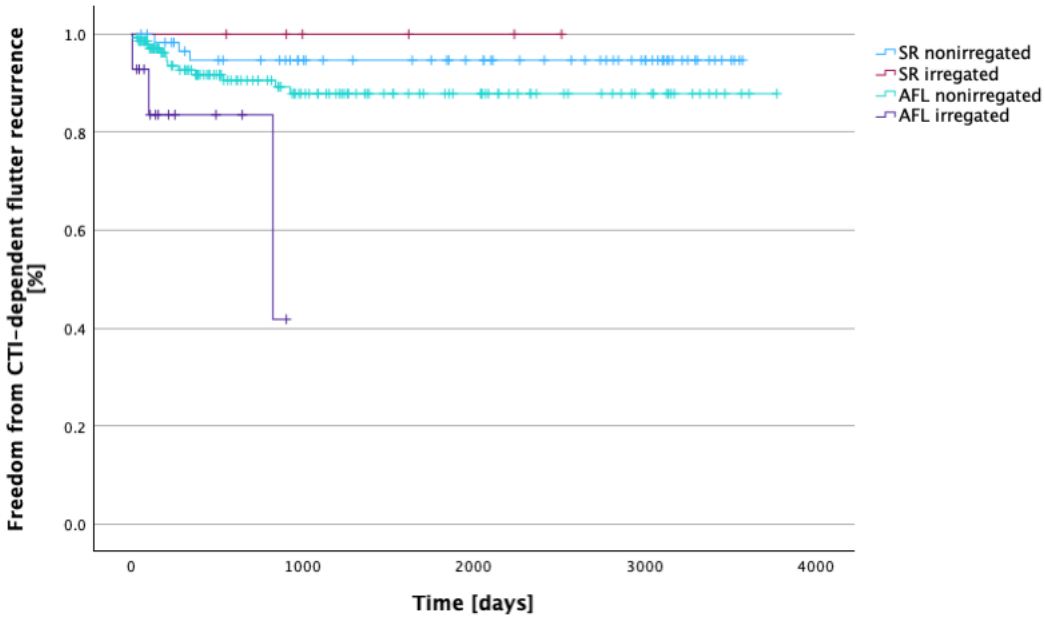

Figure S1. Kaplan-Meier estimation of freedom from CTI-dependent AFL recurrence for patients undergoing ablation in SR or during ongoing AFL, using either an irrigated or non-irrigated catheter. The groups are color-coded as follows: blue represents ablation in SR with a non-irrigated catheter, red represents ablation in SR with an irrigated catheter, green represents ablation during ongoing AFL with a non-irrigated catheter, and lilac represents ablation during ongoing AFL with an irrigated catheter. Abbreviations: AFL, atrial flutter; CTI, cavotricuspid isthmus; SR, sinus rhythm.
