
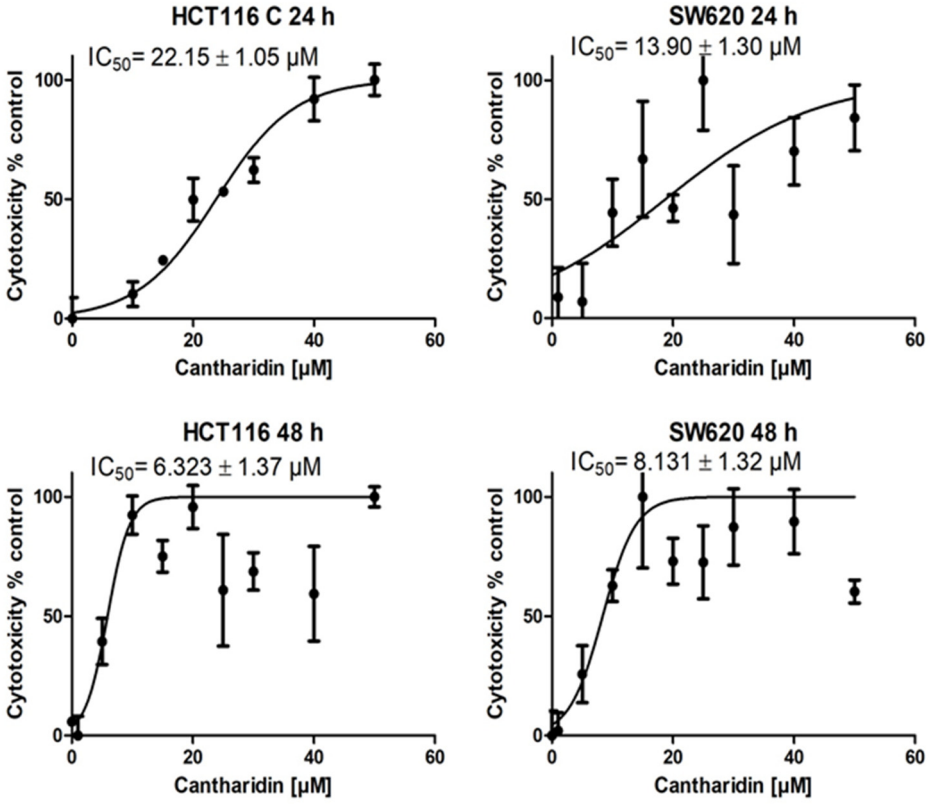

Figure S1: Assessment of cytotoxicity measured using LDH release assay after 24 h (top) and 48 h (bottom) treatment of increasing cantharidin concentrations expressed as percent of cytotoxicity of control treated HCT116 (left) or SW620 (right) cells. The means and error bars represent 3 independent experiments. IC_{50} values were calculated by nonlinear regression analysis.

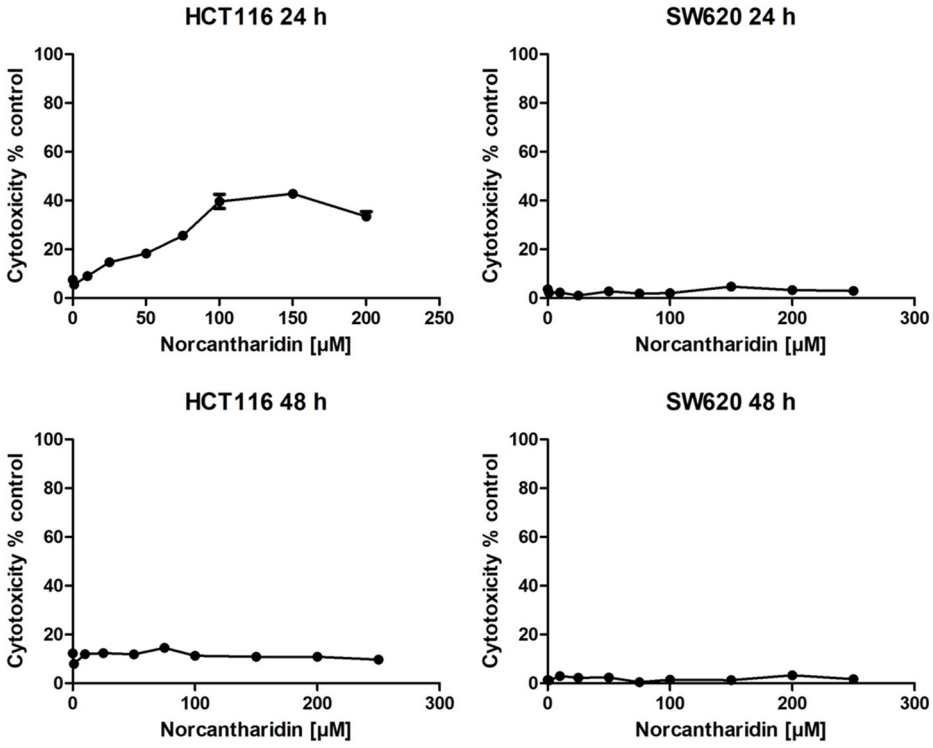

Figure S2: Assessment of cytotoxicity measured using LDH release assay after 24 h (top) and 48 h (bottom) treatment of increasing norcantharidin concentrations expressed as percent of cytotoxicity of control treated HCT116 (left) or SW620 (right) cells. The means and error bars represent 3 independent experiments.
