Table S1. Sequences of primers used for amplification of target and reference genes. For each gene, the primer sequences for forward (F) and reverse (R) are listed (5'-3'), Melting Point (temperature in °C), the amplicon (product) size (bp) and the NCBI Accession number (Acc) used for the primer design.

Gene	F/ R	Primer Sequence	Melting Point (°C)	Product Size (bp)	Accession (reference)	References
