Supplemental Table S1 – Multiple correlations of CPI and CPI variation with cardiovascular risk factors

	Variable	R	95% CI	p
CPI				
	Age	-0.271	-0.497 to -0.011	0.036
	Smoking	0.445	0.208 to 0.632	0.480
	Hypertension	-0.146	-0.392 to 0.120	0.266
	Diabetes	-0.136	-0.384 to 0.130	0.299
	CHF	-0.224	-0.458 to 0.040	0.086
CPI variation[†]				
	Age	0.188	-0.077 to 0.428	0.151
	Smoking	-0.001	-0.270 to 0.252	0.940
	Hypertension	-0.071	-0.326 to 0.194	0.592
	Diabetes	-0.088	-0.341 to 0.177	0.502
	CHF	0.201	-0.063 to 0.439	0.123
	PEEP level[§]	-0.164	-0.408 to 0.102	0.211

Spearman r correlation performed.
[†]CPI variation was computed as the difference in CPI between aortic cross-clamping and unclamping (W/m^2)
[§]PEEP level is intended as the level of PEEP applied during the clamping phase.
Abbreviations.
CPI, Cardiac Power Index; CHF, history of Cardiac Heart Failure; PEEP, positive end-expiratory pressure
