Figure S3. Fecal levels of gamma aminobutyric acid, biogenic amines and ammonium in samples from autistic children analyzed according to the severity of disease**.** Vertical lines on the bars represent standard deviation. GABA: gamma aminobutyric acid; AGM: agmatine; HISM: histamine; TYRM: tyramine; PUT: putrescine; CAD: cadaverine; Amm: ammonium. ASD: autism spectrum disorder. The severity of the disease was determined according to to CARS score: mild to moderate and severe
