Algorithm S1 Hill-Climbing algorithm used in KStable

```
Algorithm Hill-Climbing(fi)
A = {a1, a2, a3, a4, a5} //basis feature
B = {a1...a5, fi} //regular-mRMR feature fi
F = {f1...fn} //features after regular-mRMR processing, sorted according to regular-
mRMR
  fi = fi;
  do{
    if B.MCC() >= A.MCC() //Update if MCC improved
      A = B;
    else
      B = A;
    fn = move(F) //test next fn.
    B = B + {fn};
  }
  while F not isEnd()
  Return A
End Algorithm
