
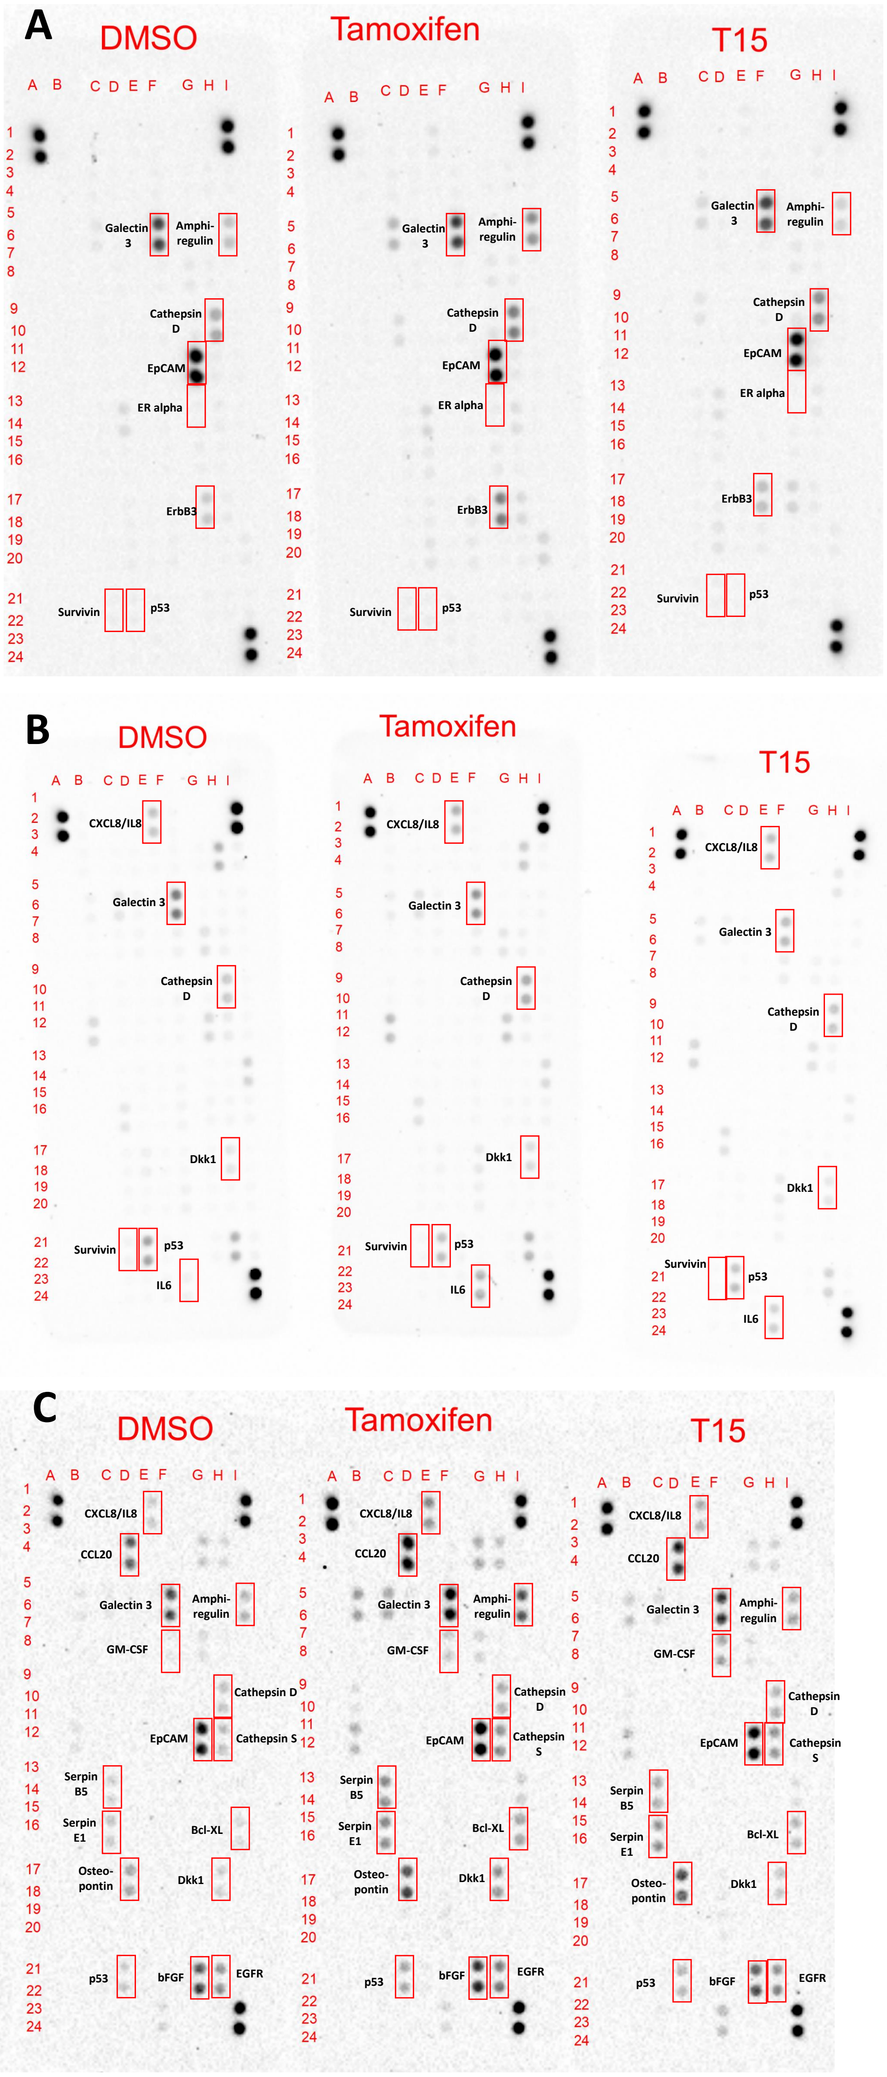

Figure S4: Pictures of the Proteome Profiler membranes of tamoxifen and T15 treated samples (A: MCF7, B: MDA-MB-231 and C: PANC1). The photos were taken with the BioRad ChemiDoc XRS+ system after 10 minutes of exposure. Proteins with 20% of the intensity measured at reference spots (at the top left and right and bottom-right corners of the membrane) were annotated.
