**Introduction**

The primary objective of the scoping review for which this methodology is written is to examine the existing evidence from the literature on the level of past and current vulnerability of the West African food system and the four pillars of food security in the context of pandemics/epidemics. Food security of all countries can be considered vulnerable during times of crisis and pandemics. However, developing countries, such as those in West Africa, already struggle to meet the United Nations zero hunger goals prior to the onset of COVID-19. Many of these same countries had previously faced similar challenges during the recent Ebola virus outbreak, making it imperative for us to understand just how pandemics/epidemics affected, and continue affecting food security. In order to help West Africa manage the current and any future outbreak effects on the region's food systems, we must also determine what sort of interventions have been and continue to be initiated as well as understand if they are effective (from both an empirical as well as perceived standpoint). We will search for and include quantitative and qualitative research as well as opinion pieces and readily available grey literature (e.g. media reports). The review methodology will follow the protocols and steps set forth by the PRISMA Extension for Scoping Reviews (PRISMA - ScR): Checklist and Explanation (Tricco *et al.*, 2018) in conjunction with Page *et al.* (2021).

**Objective Statements**

This scoping review will follow the PCC (Population, Concept and Context) primary question format:

*What do we currently know about the past and current impacts of pandemics/epidemics on food security in West Africa?*

Population: Human populations, from individuals to entire communities, households, or those part of the agricultural and trade communities.

Concept: any effect on food security (e.g. food shortages, income losses, trade restrictions, etc.) caused either directly or indirectly by any documented pandemic/epidemic that involves the transfer of a contagion when in close proximity to an infected individual (i.e. COVID-19, Ebola), not including vector transmission or those acquired by the exchange of bodily fluids (e.g. HIV/AIDS, West Nile Virus)

Context: in West African countries/communities (as indicated by the United Nations including Benin, Burkina Faso, Cape Verde, The Gambia, Ghana, Guinea, Guinea-Bissau, Ivory Coast, Liberia, Mali, Mauritania, Niger, Nigeria, Senegal, Sierra Leone and Togo).

Five secondary questions were added to the primary one:

1. *Which links can be found between pandemics/epidemics and the four pillars of food security in what West African countries?*

2. *What is the level of evidence, empirical or otherwise, that exists for each of the pillars of food security (availability, access, utilization and stability plus agency and sustainability) in terms of pandemic/epidemic effects?*

3. *What interventions/responses exist to reduce the spread of the pandemics and how it affects food security?*

*4. What interventions/responses exist to help mitigate food insecurity during pandemics/epidemics?*

5. *How do other confounding factors (e.g. power relations, transborder restrictions, closure of markets) increase the complexity of these relationships (can this complexity be shown using a logic or conceptual model)?*

6. *What gaps in knowledge can be identified given the existing empirical evidence that documents the impact of pandemics/epidemics on food security in West Africa?*

**Definitions**

*Pandemic/epidemic* - In light of enabling relevant comparisons to be made to the ongoing COVID-19 pandemic, and to keep the amount of returned information manageable, qualifying pandemics/epidemics must involve diseases where the transfer of a contagion occurs through the air and when in close proximity to an infected individual (e.g. COVID-19, Ebola) and will not include vector transmitted diseases (e.g. Malaria) or those transmitted through the exchange of bodily fluids (e.g. HIV/AIDS).

*Food Security* – Any concepts addressing food security, insecurity, hunger, malnutrition, nutrition, social justice and/or well-being, also see Pillars of Food Security and individual pillar definitions.

*West Africa* - As indicated by the United Nations including Benin, Burkina Faso, Cape Verde, The Gambia, Ghana, Guinea, Guinea-Bissau, Ivory Coast, Liberia, Mali, Mauritania, Niger, Nigeria, Senegal, Sierra Leone and Togo as well as Sub-Saharan where appropriate or in cases where West Africa is implied to be part of a document addressing Africa in its entirety.

*Pillars of Food Security* – Includes any event that negatively impacts the four pillars of food security: food availability, access, utilization, and stability. We will include the two additional dimensions: agency and sustainability.

> *Availability* – Impacts on the quality/quantity and/or culturally acceptable amount of food produced domestically or imported to meet the needs of a society. Includes market and/or agricultural and/or labour force interruptions, as well as any other impact on the supply chain.
>
> *Access* – Impacts on the financial status of a person or household that prevents acquisition of food either directly or indirectly due to other basic needs (e.g. health care), access also includes impacts on availability of support (e.g. Aid to vulnerable individuals and/or groups)
>
> *Utilization* – Given that food availability and access needs are met, impacts on the ability of an individual or group to simultaneously access clean water, home and health care so that overall physiological needs are met.
>
> *Stability* – Impacts on the ability for an individual or group to achieve food security during extreme events specifically, pandemics/epidemics and/or the synergistic impacts of additional extreme events (e.g. conflict, economic, climate, seasonal fluctuations, etc.) .
>
> *Agency* – Impacts on the ability of an individual or group to choose what they eat, produce, distribute and to have an active role in food system and security policy formation.
>
> *Sustainability* – Impacts on the ability of future generations to meet food needs (e.g. degradation of land, society and/or economy).

*Intervention* – any attempt by a government or aid group (domestic or international) to provide policy and/or support to the food security of individuals or groups in an area afflicted by a pandemic/epidemic (e.g. border import guidelines, food assistance programs, outreach, etc.).

**Eligibility Criteria**

To be used as evidence in this scoping review, retrieved resources must:

1. Focus specifically on both food security (of individuals and/or communities, i.e. households, villages, displaced peoples, and the agricultural sector) AND pandemics/epidemics in West African countries.

2. Be written in the English language.

3. Include all forms of returned evidence (e.g. peer-reviewed, policy, pre-prints, models, reviews, opinion pieces and media excerpts).

4. Include evidence returned from any period (search engine/database dependant).

5. Include all evidence that presents direct, indirect and/or theoretical effects of pandemics/epidemics on food security.

6. Do not include vector transmitted diseases (e.g. Malaria) or diseases transmitted through the exchange of bodily fluids (e.g. HIV/AIDS).

If returned evidence is missing any of the five eligibility criteria, it will be excluded from the study.

**Information Sources**

Searches will be performed using the Brock University EBSCOhost platform and include the use of two citation databases, Academic Search Complete and Google Scholar. In addition, snowballing will be performed on the reference sections of all returned review papers with eligible evidence being added to the final evidence return list.

**Searches**

Using the advanced search setting in Academic Search Complete:

1. select “Boolean/Phrase”

2. enter the following search terms and Boolean operators: Africa* AND “food security” AND (pandemic* OR epidemic* OR Ebola OR covid-19 ).

3. select “Apply related words” (this setting will instruct database to consider synonyms)

4. select “Also search within the full text of the articles”

5. select “Apply equivalent subjects” (compares and includes synonymous mapped vocabulary terms)

6. select “English”

Using the advanced search setting in Google Scholar :

1. in “with all of the words” section enter: Africa*

2. in “with the exact phrase” section enter: food security

3. in “with at least one of the words” section enter: pandemic* OR epidemic* OR Ebola OR covid-19

4. In “where my words occur” select: anywhere in the article

5. leave all other fields blank to indicate that you are interested in all authors, publications and dates

* Note that the term “Africa” was used in place of “West Africa” due to inconsistencies in the literature with regard to which countries are considered part of West Africa (e.g. some articles refer to term “Sub-Saharan” which, in some cases, include West African countries of interest).

* Note also that the term “HIV/AIDS” was not used as a limiter as this would have missed articles that considered HIV/AIDS as well as other pandemic/epidemic diseases.

All qualifying final search results lists will be imported into Covidence systematic review software (Veritas Health Innovation, Melbourne, Australia. Available at www.covidence.org) for merging, duplicate removal, and initial screening and categorization.

**Selection of Sources of Evidence**

Two reviewers (LV and HV) will independently screen the same 30 publications sampled from the search return results. A discussion of the preliminary screening results will follow with any discrepancies resolved (by a third party if necessary) and formal screening protocols revised accordingly. A single reviewer (HV) will screen the titles, abstracts and full text of all returned evidence according to the previously agreed upon screening protocol. If the title or abstract does not provide sufficient information to make an inclusion/exclusion decision, sufficient caution will be exercised through the automatic retention of the resource for the full text screening/categorization stage.

**Data Charting Process**

A data charting form will be created by HV and LV to determine which variables must be extracted from each resource. HV will chart data manually and JB will chart data with the assistance of a standardized data abstraction tool using code specific to this project. All retained resources will undergo both types of charting to mitigate any manual extraction biases and programming weaknesses attributed to the qualitative nature of some extraction criteria. A discussion of the charting results will be ongoing with any discrepancies resolved by a third party (LV). Charting will be iterative, with all revisions/rational included as supplementary material.

**Data Items**

Data charting will include general information (e.g. type of article, date written/performed, journal/platform), more specific details (e.g. reference countries, disease type) as well as Pillar characteristics (see definitions) and interventions addressed (see definitions). Given the at times vague nature of Pillar terminology as well as the amount of possible intervention criteria, both categories will be refined during the charting process with regular meetings between contributors. Transparency of decision making, including synthesis of results, will be provided through detailed records of the decision-making process. A PRISMA flow diagram of included and excluded studies, including the inclusion and exclusion criteria used will also be prepared with a supplementary list of all retained resources. A sentiment analysis will be included as part of the review analysis.

**Supplementary File S2**

PRISMA flowchart of the search and screening results for the review article: The effects of pandemics/epidemics on the vulnerability of food security in West Africa – A scoping review.

Formal Search String:
**Academic Search Complete + first 20 pages of Google Scholar (see registered protocol for details - osf.io/5hfzn; doi: 10.17605/OSF.10/PKH98)**
*Using the following search terms in Academic Search Complete:*
1. enter the following search string: Africa* AND “food security” AND (pandemic* OR epidemic* OR Ebola OR covid-19).
3. select “Apply related words” (this setting will instruct database to consider synonyms)
4. select “Also search within the full text of the articles”
5. select “Apply equivalent subjects” (compares and includes synonymous mapped vocabulary terms)
6. select “English”
*Using the advanced search setting in Google Scholar:*
1. in “with all of the words” section enter: Africa*
2. in “with the exact phrase” section enter: food security
3. in “with at least one of the words” section enter: pandemic* OR epidemic* OR Ebola OR covid-19
4. In “where my words occur” select: anywhere in the article
5. leave all other fields blank to indicate that you are interested in all authors, publications, and dates

| **Tabs** | **Description** |
|---|---|
| Search Validation | collection of documents used to validate thouroughness of search terminology (list was created using relevant documents found in the reference list of a few review documents and then cross-checked to see if they appeared in the acutal search) |
| Original Search Return | includes all documents returned from both searches after deduplication |
| Initial Screen | all documents that addressed food security and pandemics in Africa |
| West Africa | all documents that were retained and deemed to be specific to West Africa only |
| West Africa Extraction | all West Africa specific documents that were reetained for extraction |
| Notes | log of actions taken throughout the review process |

| **Source** | **Number of documents** |
|---|---|
| Academic Search Complete | 3744 |
| Google Scholar (20 pages) | 320 |
| Combined and de-duplicated | 3850 |
| Search validation add-ons | 3851 |

Following the announcement, the government instituted a number of measures to contain the spread of the virus. These measures, however, have had significant impacts on the economy and livelihoods of households. This study examines the impact of COVID-19 restrictions on household food security in Ghana. Methods: Data for the study were collected from 1,600 households in the Greater Accra, Ashanti, Northern and Upper East regions of Ghana using a mixed-mode approach (telephone interviews and face-to-face interviews). Descriptive statistics and logistic regression models were used to analyze the data. Results: The results show that the majority of households (70%) experienced a decline in income since the onset of the pandemic. Similarly, 60% of households reported a reduction in the quantity of food consumed in the last 7 days preceding the survey. Households in the Greater Accra region were more likely to experience a decline in income and food consumption than those in the other regions. Households with children under the age of 5 years were also more likely to experience a decline in food consumption than those without children under the age of 5 years. Conclusion: The study concludes that the COVID-19 restrictions have had significant negative impacts on household food security in Ghana. Policymakers should therefore consider these impacts in designing and implementing measures to contain the spread of the virus in the country." |

Population-level containment strategies have been particularly hard on the urban poor and vulnerable population groups such as female-headed households, children, the homeless, informal center employers and employees, sexual workers, the street-played, and migrants and refugees. As a short result, a secondary pandemic of hunger and food insecurity is now impacting many of these groups. An effective and sustainable global response to the COVID-19 [and any further] viral pandemic must therefore ensure that food security is an essential place of the containment and mitigation peaks. we are now focusing on cities and populations with low levels of pre-COVID food security and altogether we [and public health policy responses have was learned] |
