Table S1. Microbiological purity standards for plant raw materials.

	European Pharmacopoeia[1]	United States Pharmacopoeia[2]	WHO[3]
Aerobic bacteria	10^7 / 10^5	10^5 / 10^4 / 10^2	* / 10^7 / 10^5
Mold and yeast	10^5 / 10^4	10^3 / 10^2 / 10	10^5 / 10^4 / 10^3
Enterobacteriaceae	* / 10^3	103 / * / *	* / 10^4 / 10^3
E. coli	10^3 / absent	Absent	10^4 / 10^2 / 10
Salmonella	* / absent	Absent	* / absent /absent

* Limits are not specified. 1 - European Pharmacopoeia: Herbal medicinal products consisting exclusively of one or more herbal medicines (whole, reduced, or powdered): the first value indicates herbal medicinal products to which boiling water is added before use; The second value is herbal medicinal products to which boiling water is not added before use. 2 - United States Pharmacopoeia: The first value represents dried or powdered botanicals and botanicals that must be soaked in boiling water before use; The second value is tinctures, powdered plant extracts, liquid extracts, and plant dietary supplements; The third value represents infusions/decoctions. 3 - WHO: The first value is the limit of contamination for "raw" plant material intended for further processing; The second value is for plant materials that have been pretreated (e.g., boiling water); the third value is for other plants material for internal use.

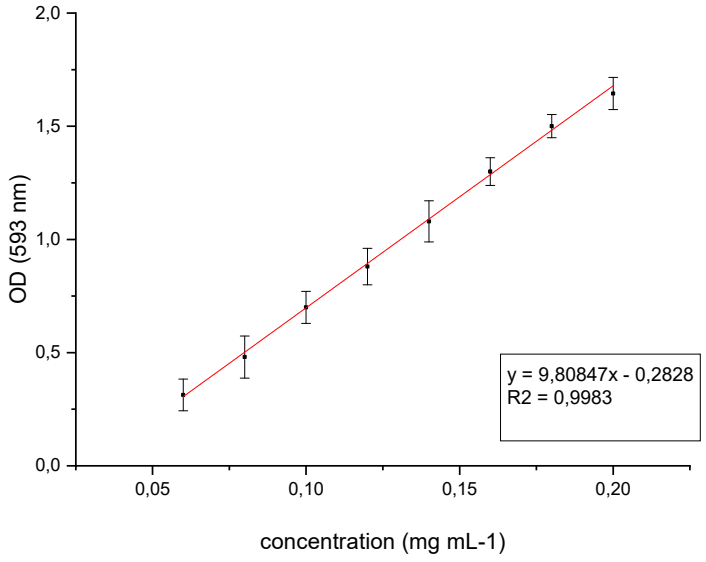

Figure S1. The calibration curve for gallic acid used to determine the TPC content.
