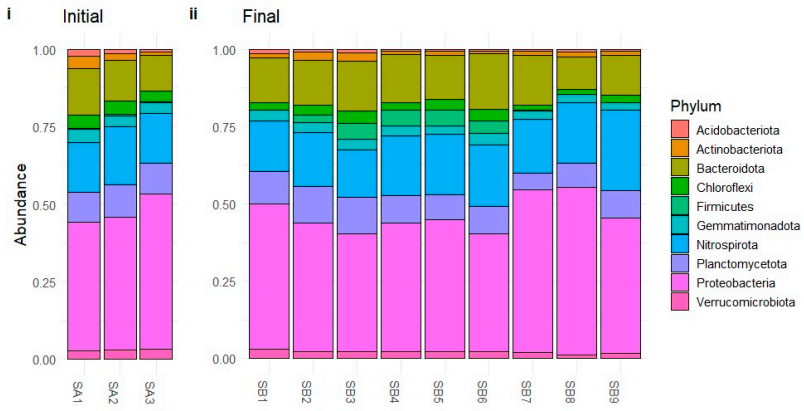
a



b

Figure S1: Phylum distribution for a) freshwater and b) low salinity biofilters.

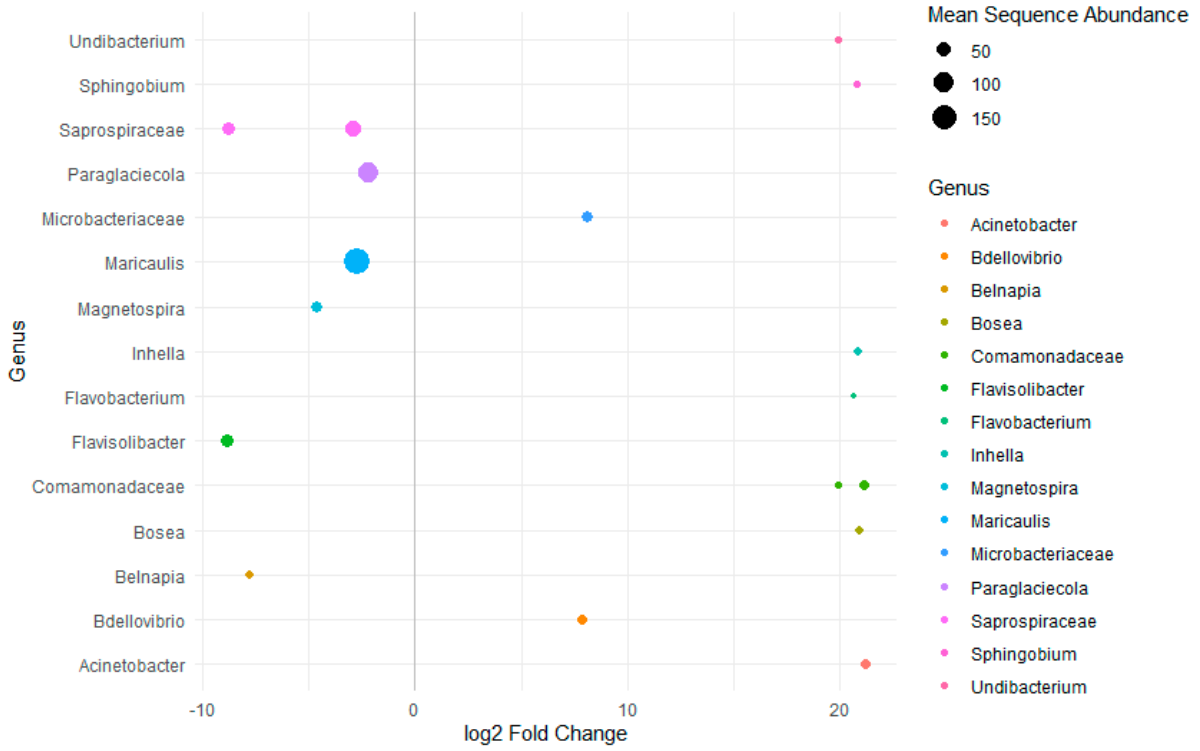


Figure S2: Differential abundance for initial freshwater samples and final freshwater samples maintained at 0 ppt.

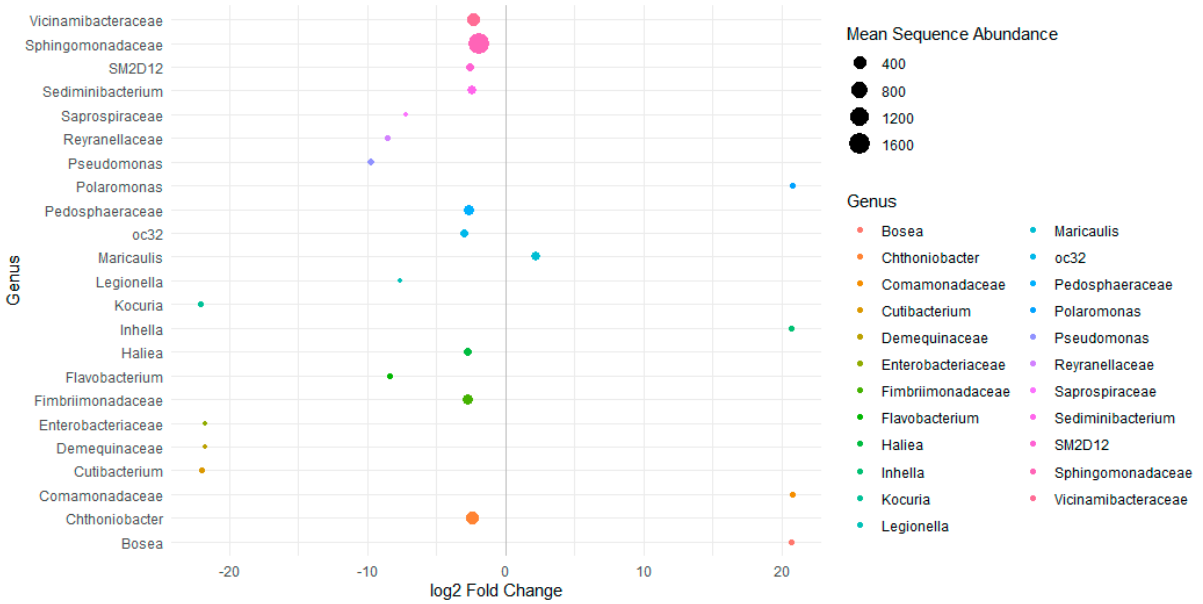

Figure S3: Differential abundance of microorganisms from the start of the 30-day 3 ppt acclimation period to the end.

Figure S4: Differential abundance of organisms in freshwater (left) versus low salinity (right) adapted biofilters. Multiple dots on one line indicates multiple species identified within the same genus.
