Supplementary File

Figure S1. Reproductive load on the tree. Measurement made in July. First year cones correspon to strobili.

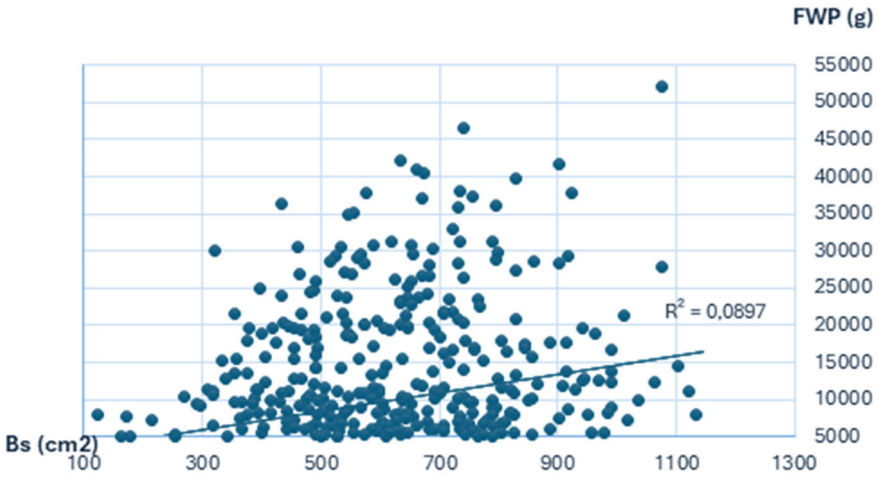

Figure S2. Tree basimetric growth versus ripe cone cumulative production per studied tree in the trial plot of Torre Marimon (Caldes de Montbui) from 2015 to 2023.

For the X,Y coordinates of each point X corresponds to the basimetric datum (Bs) and Y to the fresh weight of ripe cones (FWP) for each of the 93 trees included in the trial plot of Torre Marimon (Caldes de Montbui-Spain).
