The authors wish to inform readers that there are several minor errors and omissions in the chemical structures shown in Figure 1 of this paper [1]. While our phylligenin structure did show the correct 4*S* stereochemistry at the point of attachment of the 3,4-dimethoxyphenyl substituent, the 1*R* stereochemistry of the 2-methoxyphenol attachment point was omitted. In the structure of quebrachitol the stereochemistry that distinguishes this particular compound from other O-methylinositol isomers was not indicated. Finally, a double bond was missing in the structure of oxoputerine. The corrected Figure 1 is shown below.

Figure 1. Structures of compounds from *Mitrephora vulpina*.

Figure 1. Cont.

Finally, we have been alerted by Prof. Christophe Wiart (University of Nottingham) that the taxonomy of several of the *Mitrephora* species mentioned in our paper, including the title species *M. vulpina*, has changed, and the names *M. vulpina* C.E.C. Fisch, *M. zippeliana* and *M. diversifolia* are no longer used, while the species *M. thorelii* Pierre is now *M. tomentosa* Hook f. & Thomson. Readers are advised to consult a recent monograph on this genus [1] for the most current information.
