Supplementary Materials: Evaluation of Functionality and Biological Responses of *Mytilus galloprovincialis* after Exposure to Quaternium-15 (Methenamine 3-Chloroallylochloride)

Maria Pagano †, Gioele Capillo †, Marilena Sanfilippo, Simon Palato, Francesca Trischitta, Antonio Manganaro and Caterina Faggio *

![Figure S1. Evidence of mucus production in the tank in presence of quaternium-15 (2 mg/L).](image)

**Figure S1.** Evidence of mucus production in the tank in presence of quaternium-15 (2 mg/L).

![Figure S2. Digitized images of a digestive cell showing area changes evoked by rapid shifts in the hypotonic solution. After the swelling the cell recovers own volume.](image)

**Figure S2.** Digitized images of a digestive cell showing area changes evoked by rapid shifts in the hypotonic solution. After the swelling the cell recovers own volume.

![Figure S3. Digitized images of a digestive cells, preincubated in quaternium-15 (1 mg/L), showing area changes evoked by rapid shifts in the hypotonic solution. After the swelling the cell doesn’t recover own volume.](image)

**Figure S3.** Digitized images of a digestive cells, preincubated in quaternium-15 (1 mg/L), showing area changes evoked by rapid shifts in the hypotonic solution. After the swelling the cell doesn’t recover own volume.
**Figure S4.** Digitized images of a digestive cells preincubated in quaternium-15 (2 mg/L) showing area changes evoked by rapid shifts in the hypotonic solution. After the swelling the cell doesn’t recover own volume.

**Figure S5.** Hepatopancreas before the isolation.
