This Supporting Material file contains the following contents:

- Specific densities of fenclorim and clopyralid
- DSC results: temperatures, molar enthalpies, and entropies of fusion of fenclorim and clopyralid
- Standard molar heat capacity results, $C_{p,m}^0$, at $T = 298.15$ K for fenclorim and clopyralid
- Effusion vapor pressure results of fenclorim and clopyralid
- Computational study
- References

1. Specific Densities

Considering the agreement between the density value of fenclorim reported in the literature, 1.541 g.cm^{-3} [1], and the one determined experimentally in the present work for this compound, $(1.43 \pm 0.02) \text{ g.cm}^{-3}$, it was decided to perform the experimental determination of the density of clopyralid (3,6-dichloro-2-pyridinecarboxylic acid). The obtained result, $(1.64 \pm 0.03) \text{ g.cm}^{-3}$, was compared with the value published in the literature for the similar compound, 2-pyridinecarboxylic acid, 1.509 g.cm^{-3} [2].

Table S1. Specific densities of fenclorim and clopyralid .

| Compound | Density / g.cm^{-3} |
|------------|------------------------------------|
| Fenclorim | 1.44 |
| | 1.41 |
| | 1.44 |
| | 1.43 ± 0.04 |
| | Literature |
| | 1.541 [1] |
| | 1.364 [3] |
| | 1.4 ± 0.1 [4] |
| | $1.5 (20^\circ\text{C})$ [5,6] |
| Clopyralid | 1.62 |
| | 1.63 |
| | 1.67 |
| | 1.64 ± 0.05 |
| | Literature |
| | $1.5163 (60.17^\circ\text{C})$ [7] |

$$1.6 \pm 0.1 [4]$$

^aAverage of three measurements of the volume and mass of three pellets. The uncertainty assigned correspond to the expanded uncertainty determined from the standard deviation of the mean of the three measurements and the coverage factor $k = 4.30$ (0.95 level of confidence)

2. Differential Scanning Calorimetry

Table S2. DSC results: temperatures, molar enthalpies and entropies of fusion of fenclorim and clopyralid.

^aStandard uncertainty calculated through the RSS method combining the expanded uncertainties of the four experimental runs (0.95 level of confidence, $k = 3.18$) with the standard uncertainties of the DSC calibration. ^bUncertainties calculated through the RSS method.

3. Heat Capacity Drop Calorimetry

Table S3. Standard molar heat capacity results, $C_{p,m}^{\circ}$, at $T = 298.15 \text{ K}$ for fenclorim and clopyralid. The calibration constant used to calculate the $C_{p,m}^{\circ}$ was derived from the sapphire [NBS, SRM 720, ($\alpha\text{-Al}_2\text{O}_3$)] calibration, ($6.6809 \pm 0.0146 \text{ W}\cdot\text{V}^{-1}$).

| Exp | $m_{\text{sample}}/\text{g}$ | N_{drop} | $\langle T_{\text{furnace}} \rangle / \text{K}$ | $\langle T_{\text{calorimeter}} \rangle / \text{K}$ | T / K | $C_{p,m}^{\circ} / \text{J}\cdot\text{K}^{-1}\cdot\text{mol}^{-1}$ |
|-------------------|------------------------------|-------------------|-------------------------------------------------|-----------------------------------------------------|----------------|--------------------------------------------------------------------|
| Fenclorim | | | | | | |
| I | 0.48467 | 11 | 303.10 | 293.17 | 298.14 | 214.6 ± 1.2 |
| II | 0.42311 | 36 | 303.08 | 293.18 | 298.13 | 214.1 ± 1.2 |
| III | 0.40059 | 10 | 303.11 | 293.17 | 298.14 | 214.6 ± 1.2 |
| Clopyralid | | | | | | |
| I | 0.39698 | 8 | 303.17 | 293.17 | 298.17 | 175.4 ± 1.4 |
| III | 0.39317 | 11 | 303.16 | 293.17 | 298.17 | 175.3 ± 1.0 |

N_{drop} = number of drop experiments; T_{furnace} = average temperature of the furnace; $T_{\text{calorimeter}}$ = average temperature of the calorimeter; the uncertainty reported is twice the standard deviation of the mean and the calibration uncertainty is included.
