**Figure S1.** Loading plots showing the main metabolites responsible of the inter-species separation for the leaves analysed in ESI-MS (+) mode (**1A**), the leaves in ESI-MS (-) mode (**1B**), the phloem sap in ESI-MS (+) (**1C**), and the fruits in ESI-MS (+) (**1D**).

**Table S1.** List of the main annotated metabolites: caffeine, chlorogenic acids, benzophenone and xanthone derivatives.
