0.5	-1.35	-0.27

Table S7. The reduction potentials and peak currents of complex **1** containing different concentrations of H₂O under CO₂.

N _{H₂O} (mM)	Potential (V)	Peak current (mA)
0	-1.15	-0.09
0.083	-1.15	-0.115
0.139	-1.15	-0.146

Table S8. The reduction potentials and peak currents of complex **1** with different concentrations under 1 atm CO₂ in a 0.1 M ⁿBu₄NPF₆ CH₃CN supporting electrolyte.

N _{complex} (mM)	Potential (V)	Peak current (mA)
0.5	-1.24	-0.04
1.0	-1.15	-0.065
2.0	-1.15	-0.09
4.0	-1.15	-0.138

Figure S6. (a) CPE for H₂ evolution (black line) at -1.97 V vs NHE on GCE (0.07 cm²); (b) CPE for CO₂ reduction (red line) at -1.15 V vs NHE on GCE (0.07 cm²) at the same condition as using FTO.

Figure S7. CPE with 2 mM complex **1** (rose red line), rinse test (green line) and the blank experiment without **1** (blue line) on an FTO working electrode (1.0 cm^2).

Figure S8. The in-situ UV-Vis spectroelectrochemistry of complex **1** in CO_2 atmosphere.

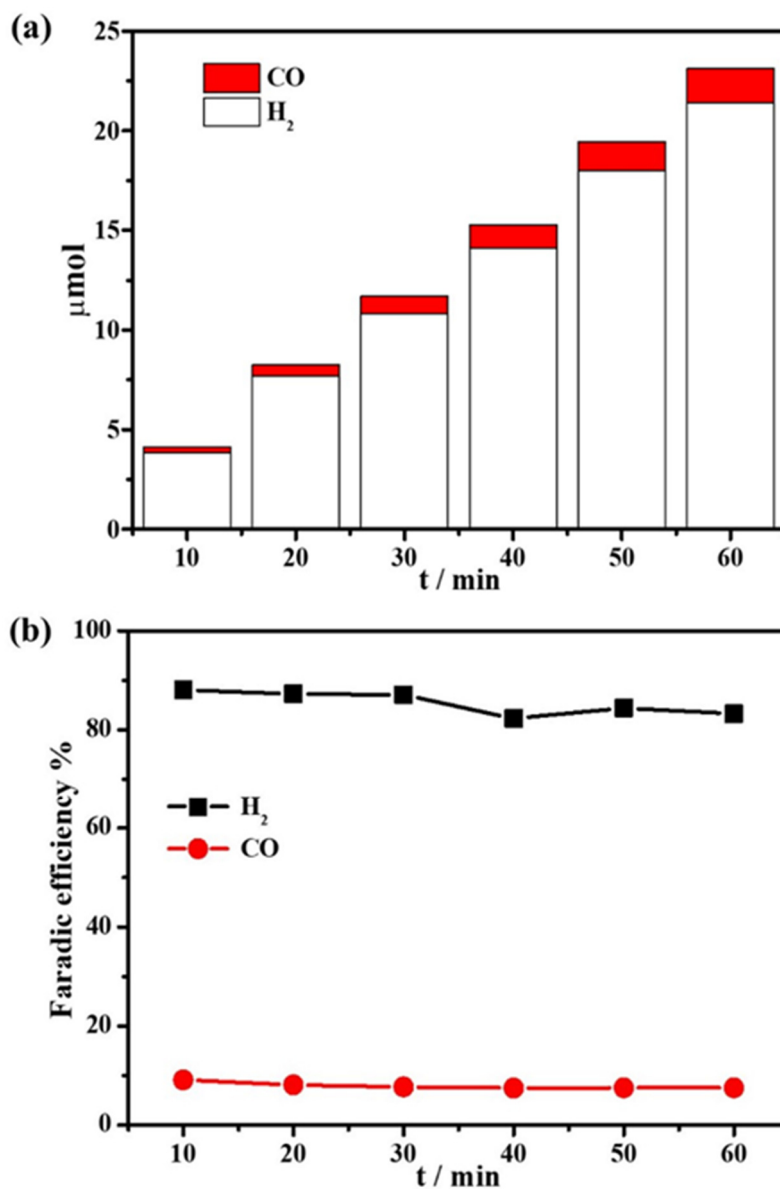

Figure S9. (a) The amount of material in the proton supply system that is combined with the electrocatalytic reduction CO_2 product. (b) The Faraday efficiency curves of the electrocatalytic reduction products CO and H_2 in the proton supply H_2O system. Based on the equations (S1) and (S2), the calculated TOF and TON values of the complex **1** for CO_2 reduction are 0.07 s^{-1} and 280, respectively.

Figure S10. Cyclic voltammetry of complex **1** in the presence (green) and absence (black) of CO_2 recorded at 100 mV s^{-1} at glassy carbon in a $0.1 \text{ M tBu}_4\text{NPF}_6 \text{ CH}_3\text{CN}$ supporting electrolyte.

Figure S11. Cyclic voltammograms of complex **1** (2 mM) recorded in the presence of 0.58 mM TsOH·H₂O under 1 atm Ar at scan rate range from 100 to 500 mV s⁻¹ in CH₃CN (0.1 M ⁿBu₄NBF₆) at a glassy carbon electrode.

Figure S12. The *in-situ* UV-Vis spectroelectrochemistry of complex **1** in Ar atmosphere.

Figure S13. Cyclic voltammograms of complex **1** (2 mM, red trace) and in the presence of 10 mM TsOH·H₂O (black trace) in CH₃CN (0.1 M ⁿBu₄NPF₆) at a glassy carbon electrode and 100 mV s⁻¹.

Figure S14. Cyclic voltammograms recorded in the absence (black trace) or in the presence of 10 mM of TsOH·H₂O (red trace). Scan rate: 100 mV s⁻¹. Working electrode: glassy carbon. Counter electrode: Pt wire. Reference electrode: Ag/AgCl.

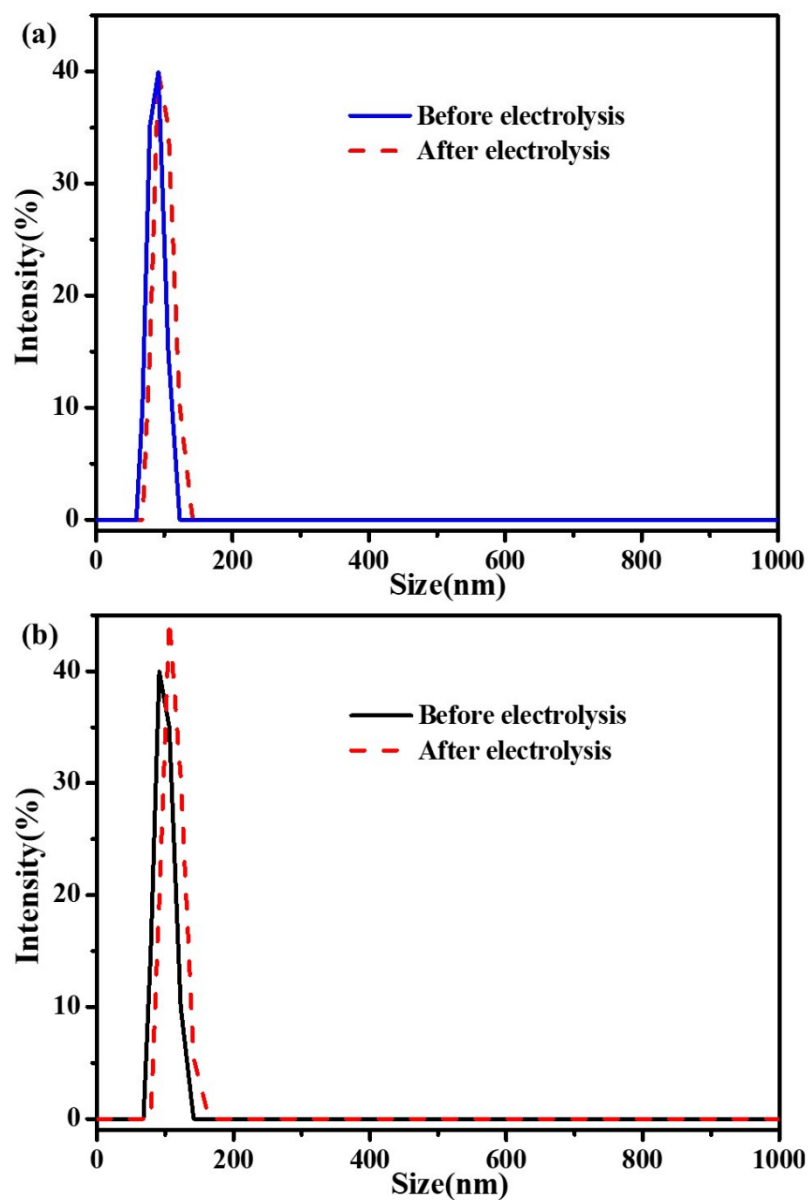

Figure S15. DLS spectra of the electrolyte before and after the CPE test. (a) DLS of the complex **1** containing 0.58mM TsOH·H₂O in CH₃CN (0.1 M ⁿBu₄NPF₆) before and after 4000 s electrolysis; (b) DLS of the complex **1** in CH₃CN (0.1 M ⁿBu₄NPF₆) under 1atm CO₂ before and after 4000 s electrolysis.

Figure S16. The Faraday efficiency curves of the electrocatalytic hydrogen evolution products H_2 in the proton supply 0.58 mM TsOH· H_2O system.

Controlled Potential Electrolysis: Controlled potential electrolysis takes place in GC-2014C. The FTO is used for the working electrode, the reference electrode is Ag/AgCl electrode containing saturated KCl solution, and the opposite electrode is platinum wire electrode. The working electrolytic contains a 2mM complex, a proton source required for the experiment, and an acetonitrile solution supporting the electrolyte (tetrabutylammonium hexafluorophosphate). The value of TON was calculated according to the electrolytic time of 4000 s. F is the Faraday constant ($96485 \text{ C} \cdot \text{mol}^{-1}$). n is the number of transferred electrons ($n=2$).

$$FE = \frac{ppm \cdot V(ml) \cdot n \cdot F}{22.4 \cdot Q} 100\% \quad (S1)$$

$$Q = it \quad (S2)$$

Based on the equations (S1) and (S2), we have calculated the TOF and TON values of the complex **1** for CO_2 reduction, which are 0.07 s^{-1} and 280, respectively, as shown in the caption of Figure S9.

During hydrogen evolution test, after adding 0.58 mM of p-toluenesulfonic acid, FE of H_2 is about 7.6% and TON = 78, as shown in Figure S16.

Figure S17. Plot of the magnetic moments (μ_{eff}) versus the temperature T for solid sample of complex **1**.

Table S9. The molecular geometry of complex **1** as predicted by SHAPE 2.1.
