Supplementary Information

Figure S1. Quantification of protein levels in MCF-7 cells transfected with (A) siCav-1 or (B) siBKCa and their corresponding scrambled siRNAs (siControl). The values are normalized by β-actin and expressed relative to that of control (100%), * p < 0.05.

Figure S2. Quantification of protein levels in MCF-7 cells transfected with (A) pCav-1 or (B) pBKCa and their corresponding vectors. The values are normalized by β-actin and expressed relative to that of control (100%), * p < 0.05.
