

Supplementary Information

Table S1. Expression levels of miR-23a and *APAF1* in clinical carcinogenesis of colorectal cancer (CRC) samples. **(A)** Endogenous expressions of miR-23a and *APAF1* mRNA in the blood samples obtained from 32 healthy controls (CTL) and 70 CRC patients (C); assayed using RT-qPCR and expressed as fold change ($2^{-\Delta\Delta Ct}$) value with respect to the healthy controls; and **(B)** Endogenous expressions of miR-23a, *APAF1* mRNA and *APAF1* protein in the subset of 30 paired cancer tissues. Tissue miR-23a and *APAF1* mRNA levels were determined by RT-qPCR while tissue *APAF1* protein expression was detected by Western blot. Expression value was calculated as fold change of cancer tissue versus the adjacent normal mucosa.

Table S1. (A).
