Supplementary Materials: Prognostic Value of microRNAs in Preoperative Treated Rectal Cancer

Azadeh Azizian, Ingo Epping, Frank Kramer, Peter Jo, Markus Bernhardt, Julia Kitz, Gabriela Salinas, Hendrik A. Wolff, Marian Grade, Tim Beißbarth, B. Michael Ghadimi and Jochen Gaedcke

Table S1. (A) Clinic parameters of 45 patients enrolled in this study for microarray analysis (set 1); (B) Clinic parameters of all 147 patients enrolled in this study for qPCR analysis (set 2).

</table>

f = female, m = male, CSS time = cancer specific survival time (in months), LR time = time without a local recurrence of the tumor (in months), DMS time = time without a distant metastasis (in months), DFS time = time of disease free survival (in months), (1) = event.
Figure S1. Cont.
**Figure S1.** Survival plots showing significant correlation to microRNA expression determined by microarray analysis. Red curves represent patients with a high expression of the microRNA, blue curves represent patients with a low expression of the microRNA. Curves showing no significant correlations are not shown. OS, overall survival; DFS, disease-free survival; CSS, cancer-specific survival; DMS, distant-metastasis-free survival.
