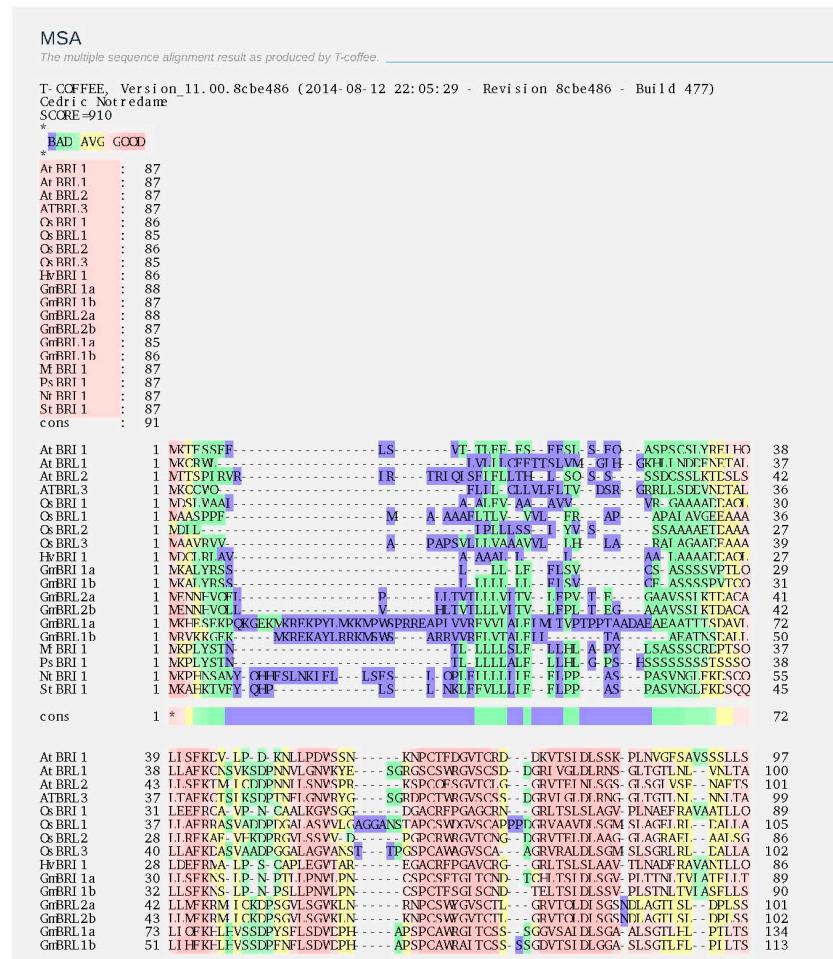

Figure S1. Cont.

Figure S1. *Cont.*

Figure S1. Cont.

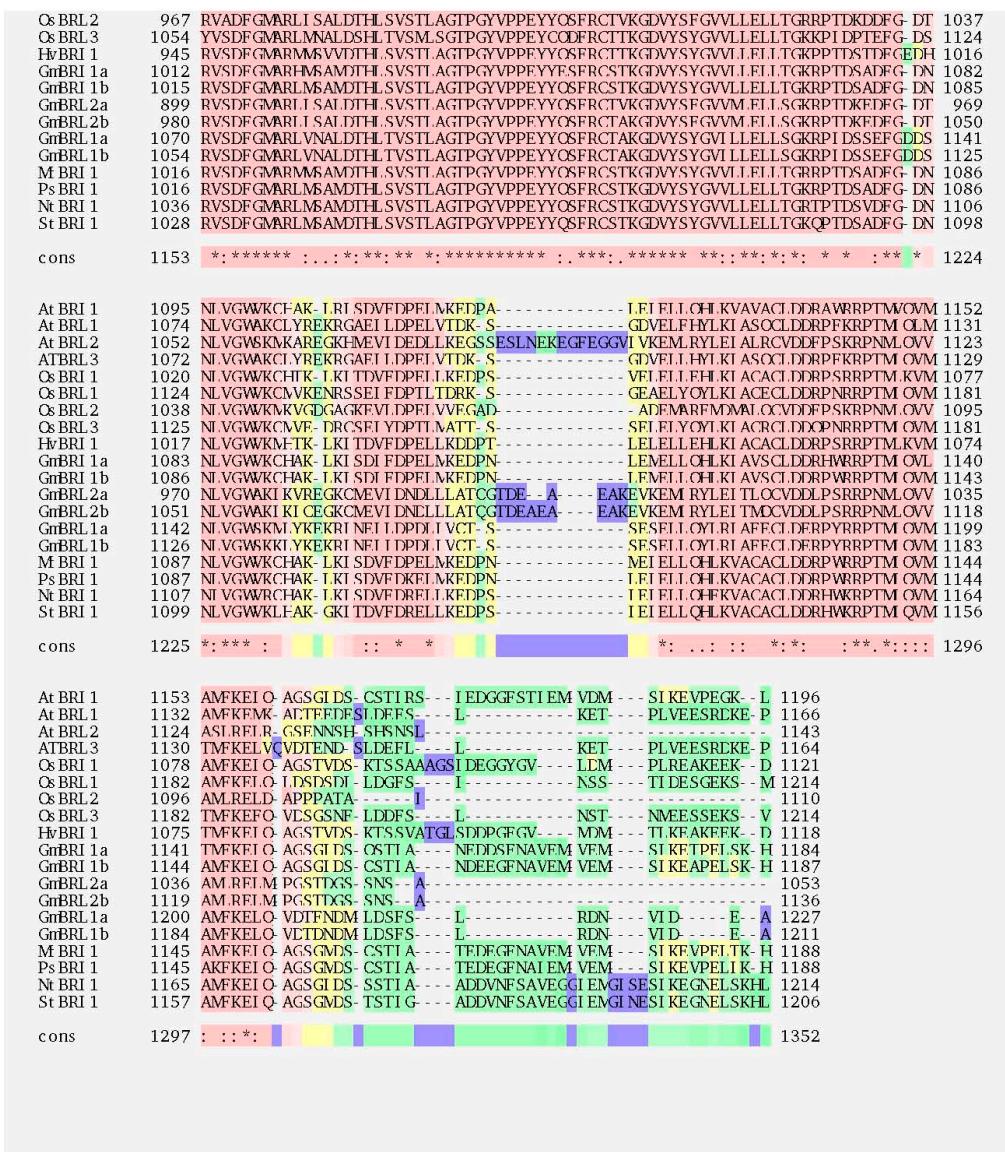

Figure S1. Alignment of the full amino acid sequences of the BR receptors from *Arabidopsis thaliana* (At), *Oryza sativa* (Os), *Glycine max* (Gm), *Solanum tuberosum* (St), *Medicago truncatula* (Mt), *Nicotiana tabacum* (Nt), and *Pisum sativum* (Ps). T-COFFEE V11.0 was used to construct the alignments [81]. The amino acid sequences that are identical in all aligned BR receptors are indicated with an asterisk (*), sequences that are conserved are indicated with a dot (. and :).

MSA*The multiple sequence alignment result as produced by T-coffee.*

T-COFFEE, Version_11.00.8cbe486 (2014-08-12 22:05:29 - Revision 8cbe486 - Build 477)

Figure S2. *Cont.*

Figure S2. Alignment of the ectodomains of the BR receptors from *Arabidopsis thaliana* (At), *Oryza sativa* (Os), *Glycine max* (Gm), *Solanum lycopersicum* (Sl), *Nicotiana tabacum* (Nt), *Pisum sativum* (Ps), and *Hordeum vulgare* (Hv). T-COFFEE V11.0 was used to construct the alignments [81]. The amino acid sequences that are identical in all aligned BR receptors are indicated with an asterisk (*), sequences that are conserved are indicated with a dot (.), and :.

Figure S3. Alignment of the island domain sequences of the BR receptors from *Arabidopsis thaliana* (At), *Oryza sativa* (Os), *Glycine max* (Gm), *Solanum lycopersicum* (Sl), *Nicotiana tabacum* (Nt), *Pisum sativum* (Ps), and *Hordeum vulgare* (Hv). T-COFFEE V11.0 was used to construct the alignments [81]. The amino acid sequences that are identical in all aligned BR receptors are indicated with an asterisk (*), sequences that are conserved are indicated with a dot (. and :).

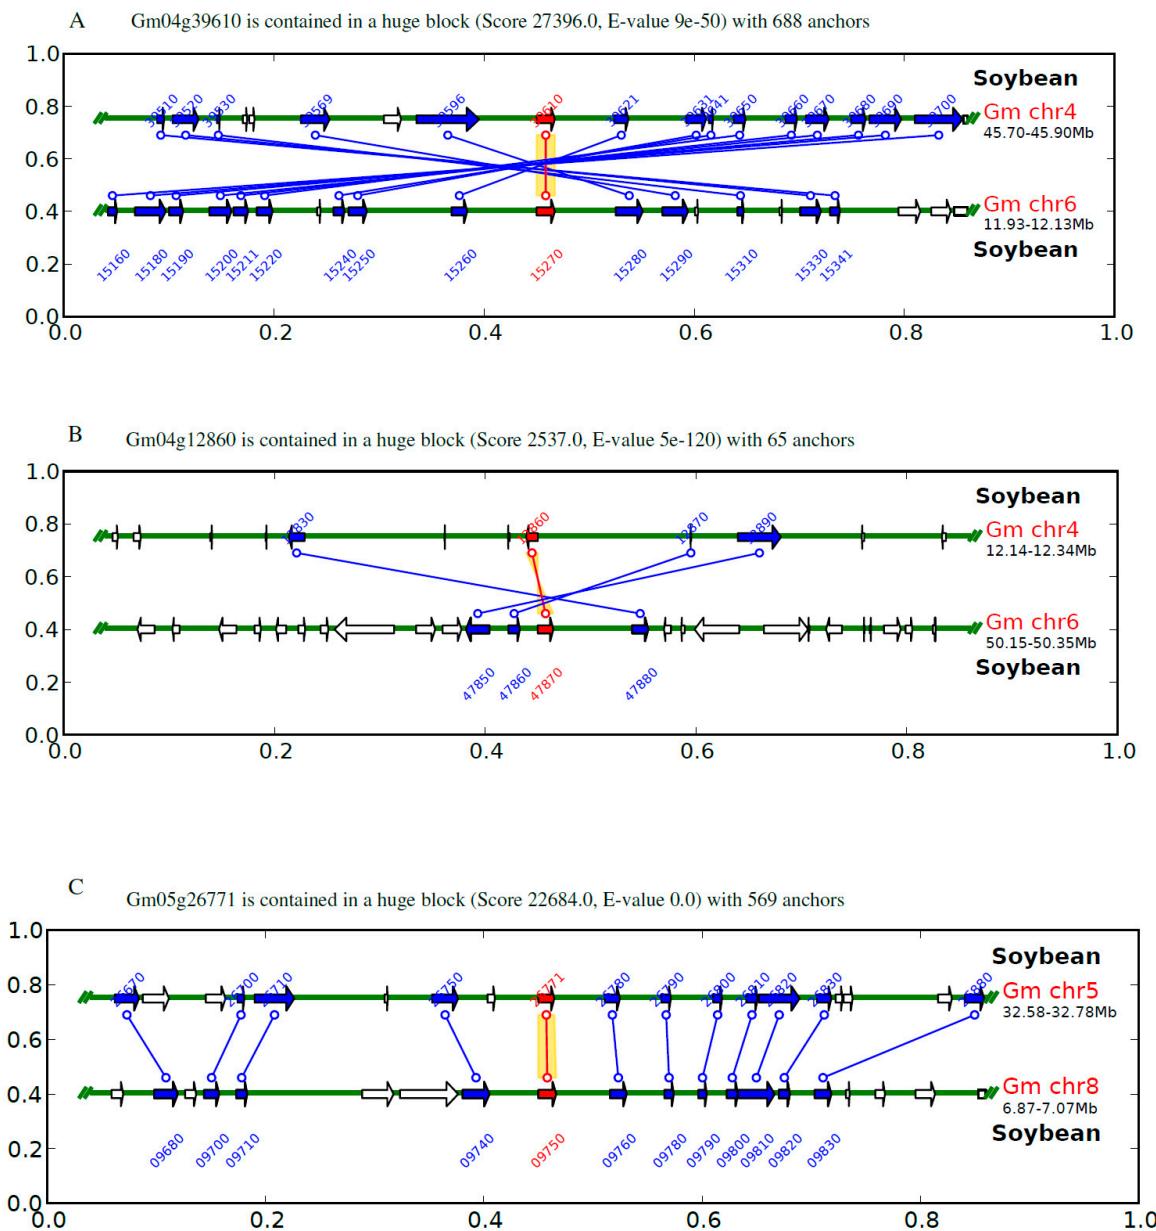

Figure S4. Duplication analysis of the BR receptor genes in soybean. Three gene duplication events can be found in soybean, *Glyma04g39610* (*GmBRI1b*) to *Glyma06g15270* (*GmBRI1a*) (**A**); *Glyma04g12860* (*GmBRL1a*) to *Glyma06g47870* (*GmBRL1b*) (**B**); and *Glyma05g26771* (*GmBRL2a*) to *Glyma08g09750* (*GmBRL2b*) (**C**). The intra-species blocks for *GmBRI1a*, *GmBRL1a*, and *GmBRL2a* are shown in **A**, **B**, and **C**, respectively. Graphs display 100-kb regions. Blue arrows indicate the other anchor genes in the region, red indicates the query locus.

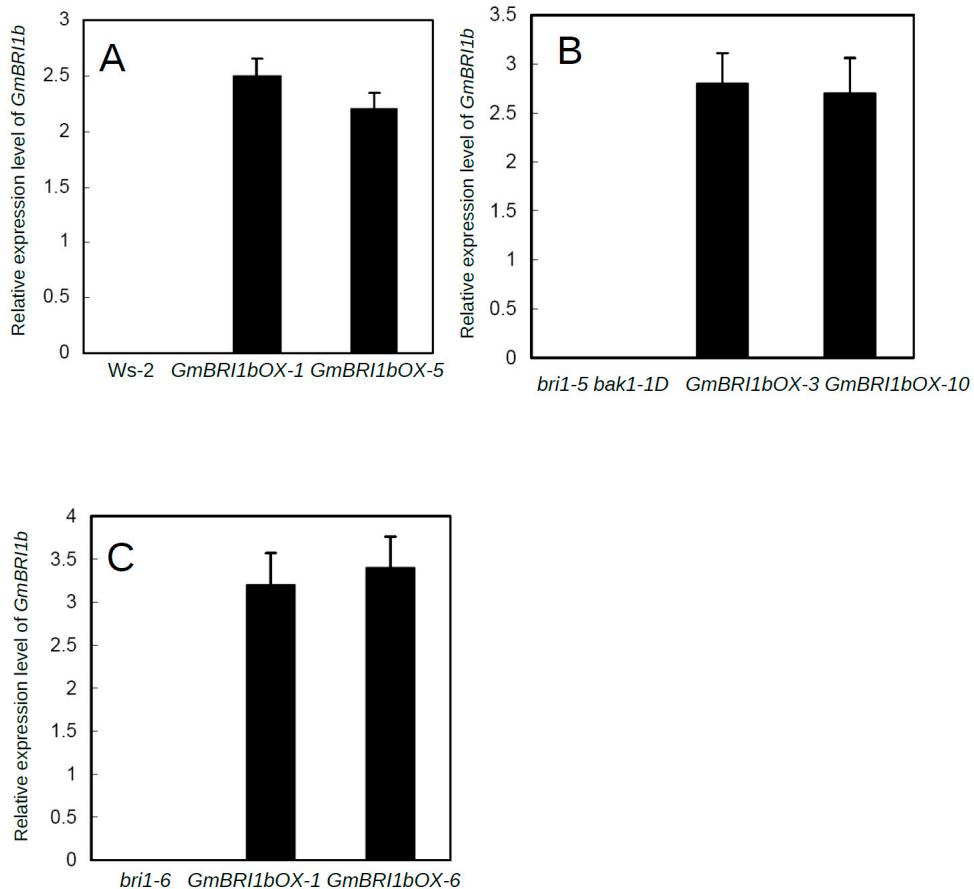

Figure S5. The relative expression levels of *GmBRI1b* in transgenic lines in Ws-2 (A), *bri1-5 bak1-1D* (B), and *bri1-6* (C) background, respectively. Quantitative real-time PCR was used to determine the relative transcription levels of *GmBRI1b* in transgenic lines. *AtEF-1a* was used to normalize the relative expression levels of *GmBRI1b*. Results are means \pm SD from three independent experiments.
