

## Supplementary Materials: Osteocyte Alterations Induce Osteoclastogenesis in an In Vitro Model of Gaucher Disease

Constanza Bondar, Maximiliano Ormazabal, Andrea Crivaro, Malena Ferreyra-Compagnucci, María Victoria Delpino, Paula Adriana Rozenfeld and Juan Marcos Mucci

**Figure S1.** MLO-Y4 cells were treated with 0, 250 or 500  $\mu$ M conduritol- $\beta$ -epoxide (CBE) for 3 days and glucosylceramide levels were evaluated by thin layer chromatography (TLC) together with a standard. Black arrow indicates GlcCer. A picture is shown representative of three independent experiments performed.
