

Figure S1. GO enrichment analysis of target mRNA of DE lncRNA in activated hHSCs (con) and quiescent hHSCs (VPA). The blue, green, and red colors indicate biological processes, cellular components, and molecular functions, respectively.

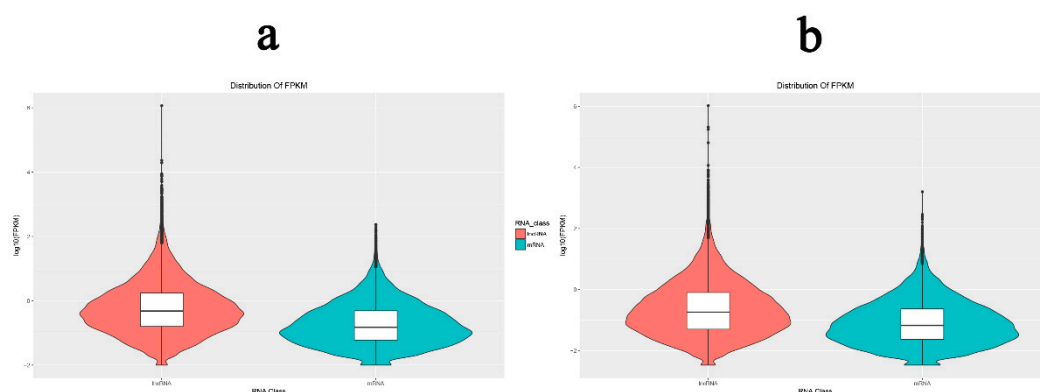

Figure S2. FPKM value of lncRNAs and mRNAs in con (hHSC myofibroblasts) and VPA (5.0mM VPA 4 day). (a and b) show the expression levels of lncRNAs and mRNAs in con (hHSC myofibroblasts) and VPA (5.0mM VPA 4 day), respectively.
