

Wicki S et al., Loss of BID delays FASL-induced cell death of mouse neutrophils and aggravates DSS-induced weight loss

ONLINE SUPPLEMENTARY INFORMATION

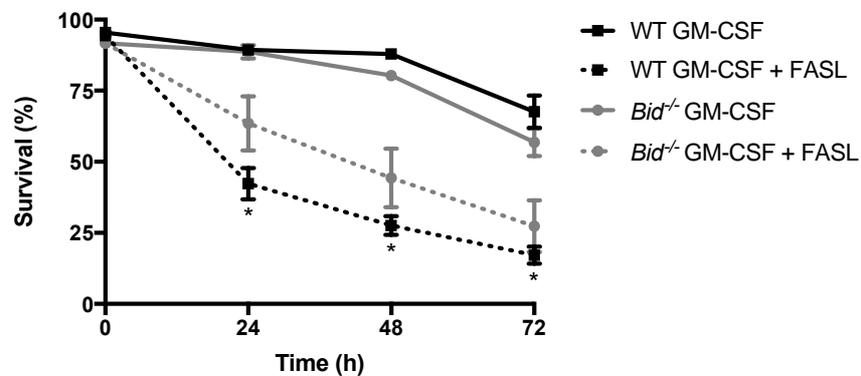

Supplementary Figure S1 (Related to Figure 1).

(a) WT and *Bid*^{-/-} neutrophils were treated with FASL (100 ng/ml) for indicated time points. Viability was assessed by flow cytometry using GFP-Annexin V/PI exclusion. $n \geq 4$, mean \pm SEM. (b) WT and *Bid*^{-/-} neutrophils were pre-treated with Q-VD (20 μ M) and/or Nec.1 (20 μ M) for 30 min followed by administration of FASL (100 ng/ml) for indicated time points. Viability was determined by flow cytometry. $n \geq 4$, mean \pm SEM. (c) *Ripk3*^{-/-} neutrophils were pre-treated with Q-VD (20 μ M) for 30 min prior to stimulation with FASL for indicated time points. Viability was assessed by flow cytometry. $n \geq 4$, mean \pm SEM. All experiments were performed with *in vitro* differentiated neutrophils.

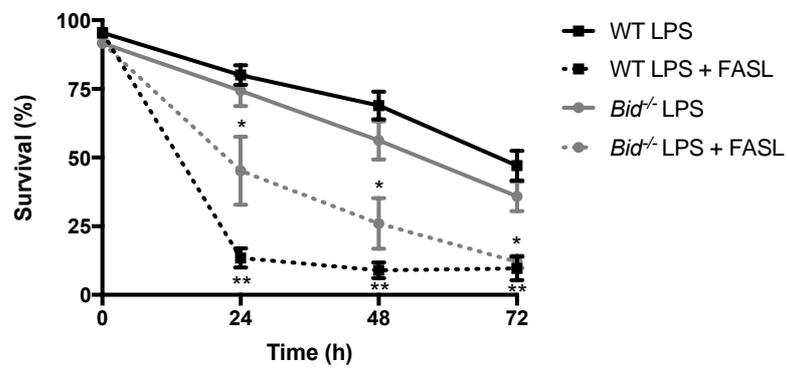

Supplementary Figure S2 (Related to Figure 1).

WT, *Bid*^{-/-} and *Bim*^{-/-} primary mouse neutrophils were treated with FASL (100 ng/ml) for indicated time points. Viability was assessed by flow cytometry using GFP-AnnexinV/PI exclusion. $n \geq 3$, mean \pm SEM.

Supplementary Figure S3 (Related to Figure 3).

In-vitro differentiated WT and *Bid*^{-/-} neutrophils were primed with GM-CSF (1 ng/ml) for 30 min prior to stimulation with FASL (100 ng/ml) for indicated time points. Viability was assessed by flow cytometry using GFP-Annexin V/PI exclusion. $n \geq 3$, mean \pm SEM.

**Supplementary Figure S4 (Related to Figure 4).**

In-vitro differentiated WT and Bid^{-/-} neutrophils were primed with LPS (10 ng/ml) for 30 min prior to stimulation with FASL (100 ng/ml) for indicated time points. Viability was assessed by flow cytometry using GFP-Annexin V/PI exclusion. n=3, mean ± SEM.
