

Supplementary Figure S1. Expression of CmHKT1;2 and CsHKT1;1 in response to NaCl. **(A)** Time-course expression analysis of *CmHKT1;2* response to NaCl (75 mM) treatment by qRT-PCR in pumpkin roots. The *Actin* gene was used as an internal control. Error bars represent SE ($n = 3$). **(B)** Time-course expression analysis of *CsHKT1;1* response to NaCl (75 mM) treatment by qRT-PCR in cucumber roots. The *Actin* gene was used as an internal control. Error bars represent SE ($n = 3$).

Supplementary Figure S2. Overexpression of CmHKT1;1 in cucumber. **(A)** *Agrobacterium tumefaciens* mediated transformation in cucumber. **a**, Lower halves of cucumber cotyledons used for transformation; **b**, Explants on shoot induction medium (containing antibiotics and hormones); **c**, Shoots with kanamycin resistance were cut and cultured in MS rooting medium with antibiotics for development into whole plants; **d**, Transgenic plants were transferred to the pots with sterile substrate for naturalizing. **(B)** Identification of the positive transgenic plants by

PCR, with primers forward *CmHKT1;1* primer and reverse primer of OCS terminator (Oct).

(C) RT-PCR analysis of *CmHKT1;1* transcripts in transgenic cucumber.
