DLD-1

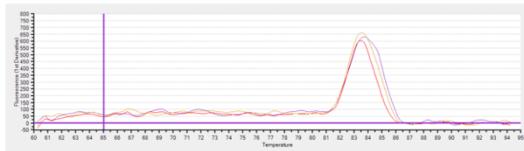

H1299

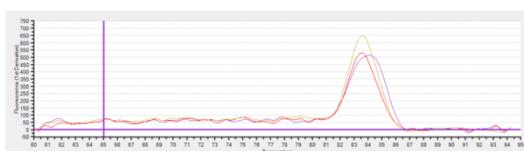

Supplementary Figure S1. Knockdown of either β -catenin or TCF4 exhibits moderately reduction of NRF3 protein levels in DLD-1 and H1299 cells. Western blot analyses using the indicated antibodies were performed. Protein expression were normalized to α -Tubulin protein expression. The data are presented as the mean \pm SD (n=3). ** p<0.01 (ANOVA-Tukey).

Supplementary Figure S2. Melting curves of qRT-PCR in the ChIP analysis of Figure 4C, indicating the specificity of the reaction.

Supplementary Figure S3. The NRF3-mediated *GLUT1* gene expression does not require the p53 reduction. Knockdown of *p53* and/or *NRF3* was performed in HCT116 cells. mRNA expression was normalized to β -actin mRNA. The data are presented as the mean \pm SD (n=3).
