
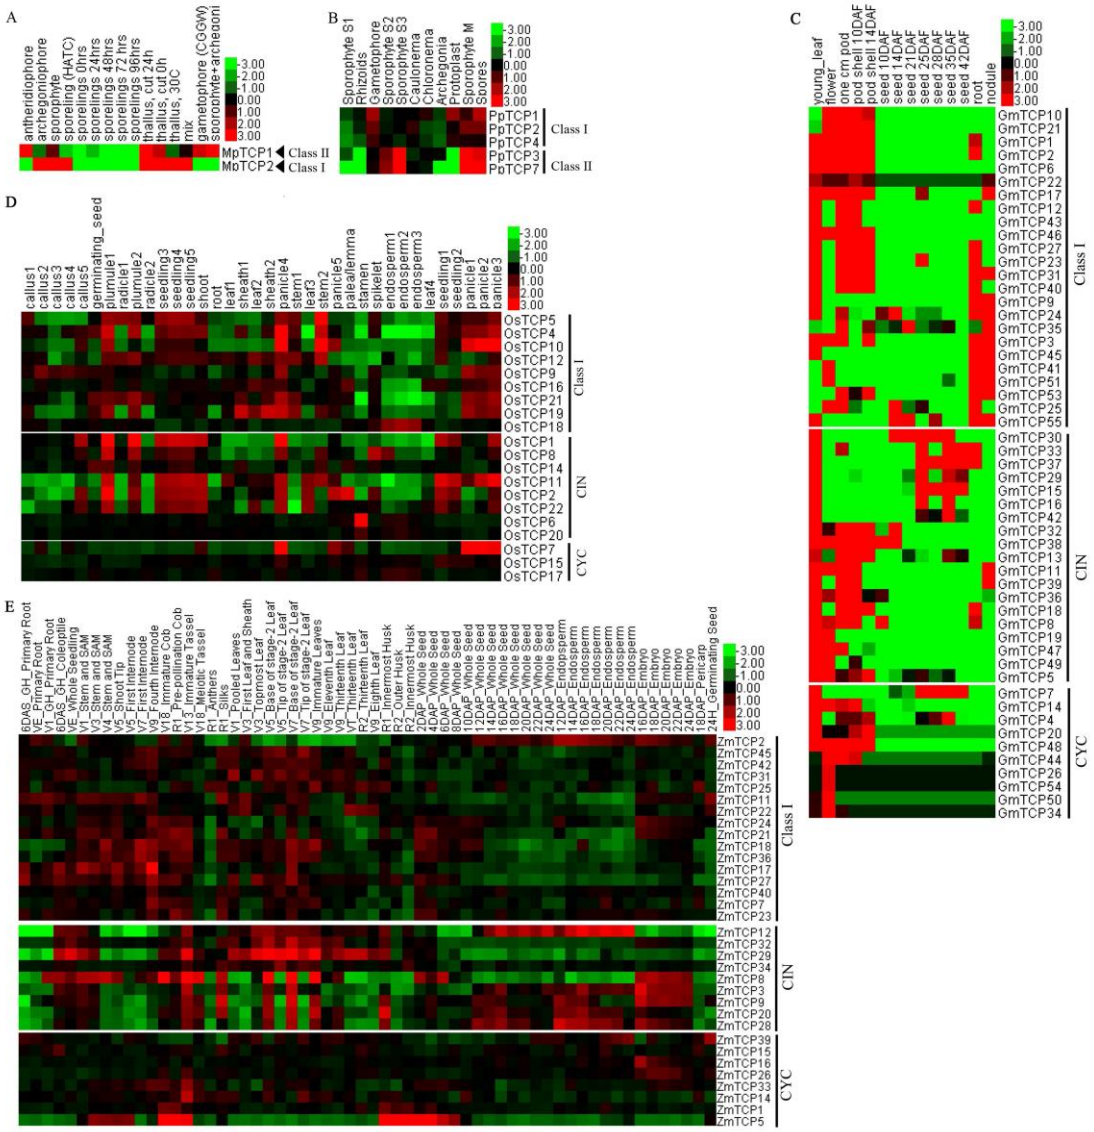

Figure S3. Expression profiles of TCP genes in *M. polymorpha, P. patens, G. max, Z. mays* and *O. sativa* across different developmental stages and organs. A: *M. polymorpha*; B: *P. patens*; C: *G. max*; D: *O. sativa*; E: *Z. mays*. The genes are listed on the right. The tissues used for expression analysis are indicated at the top of each column. The coloured bar represents $\log_2$ expression values. Red, green, and black indicate high, low, and medium expression levels, respectively.
