

Figure S1. Endogenous PrP^C expression in siRNA PrP and Scrambled-treated hDPSCs. hDPSCs, untreated or treated with siRNA PrP or Scrambled siRNA for 72 h, were analyzed by Flow Cytometry analysis using mouse anti-PrP SAF32 mAb. Flow Histograms represent log fluorescence *vs* cell number, gated on cell population of a side scatter/forward scatter (SS/FS) histogram. Cell number is indicated on the y-axis and fluorescence intensity is represented on the x-axis. The panel was compared with the corresponding secondary antibody as negative control. A representative experiment among 3 is shown.
