

Figure S4. FLA protein sequences in 13 plant species. Signal peptide is highlighted in green. The fasciclin domain is denoted by blue. Yellow highlighted sequences are AGP regions, and the red sequences in AGP regions indicate putative AG glycomodules (Ala–Pro, Ser–Pro, Thr–Pro, Gly–Pro, Val–Pro and Pro–Ala). Red highlighted sequences are the GPI-modification sites.

Red algae

Chondrus crispus
