Figure S1. Comparison of alpha and beta diversity among CRC patients at baseline (CRC-T0) and healthy controls (HC). **(A)** Shannon index (p=0.026); **(B)** Chao1 index (p=0.001); **(C)** Principal component plot based on Bray-Curtis distance matrix from patients with CRC and healthy controls using Bray-Curtis dissimilarity index at genus-level (p=0.0001). The first two coordinates are plotted with the percentage of variability explained indicated on the axis.
