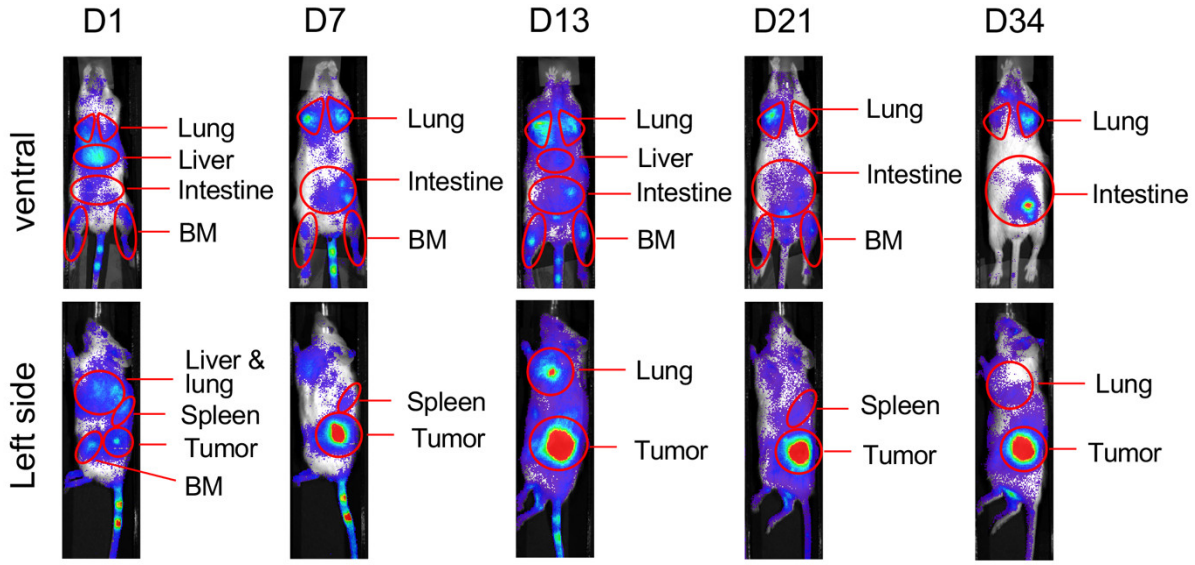

**Figure S1.** Tissue biodistribution of PBMC-iNKT cells in an A375-CD1d human melanoma xenograft NSG mouse model. Related to Figure 5. Representative images showing iNKT cell load in experimental mice over time. These mice are injected with A375-CD1d tumor cells, *α*GC and PBMC-iNKT-FG cells. Both ventral and left side views are shown.

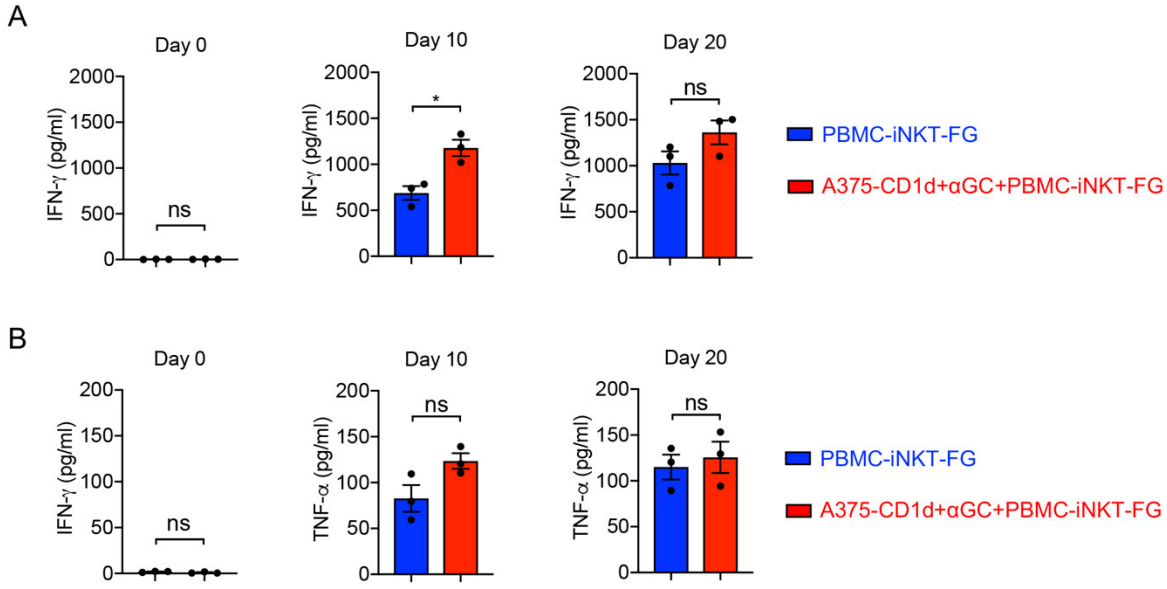

**Figure S2.** Mouse serum cytokine changes in an A375-CD1d human melanoma xenograft NSG mouse model. Related to Figure 5. Levels of human IFN-γ (A) and TNF-α (B) were measured by ELISA on serum collected from mouse peripheral blood on different days after PBMC-iNKT-FG cell infusion. Representative of 2 experiments. Data are presented as the mean ± SEM. ns, not significant, *$p < 0.05$ by Student's t test.
