

## Table of Contents:

**Figure S1:** Pseudo 2D DOSY of A $\beta$ (25-35) in SDS with 1,4-dioxane as a reference recorded at day 0 and here reported as example.

**Figure S2:** Intensities of A $\beta$ (25-35) (continuous line) and SDS (dashed line) signals plotted in function of the gradient strength as recorded from DOSY experiments at days 0, 4, 7 and 14.

**Figure S3:** 1D  $^1\text{H}$  spectra of A $\beta$ (25-35) recorded at days 0 (black), 4 (red), 7 (green) and 14 (blue) on Bruker 600 MHz in SDS micelles.

**Figure S4:** High-field region (0-4.4 ppm) of 1D  $^1\text{H}$  spectra of A $\beta$ (25-35) recorded at days 0 (black), 4 (red), 7 (green) and 14 (blue) on Bruker 600 MHz in SDS micelles.

**Figure S5:** Low-field region (6-8.7 ppm) of 1D  $^1\text{H}$  spectra of A $\beta$ (25-35) recorded at days 0 (black), 4 (red), 7 (green) and 14 (blue) on Bruker 600 MHz in SDS micelles.

**Figure S6:** Low-field strips (7.4-8.8 ppm) of 2D-NOESY spectra of A $\beta$ (25-35) recorded at days 0, 4, 7 and 14 on Bruker 600 MHz in SDS micelles.

**Table S1:**  $^1\text{H}$  Chemical Shifts of A $\beta$ (25-35) at day 0 acquired on Bruker 600 MHz in SDS micelles. The final pH was 7.4. NMR experiments were recorded at 25 °C.

**Table S2:**  $^1\text{H}$  Chemical Shifts of A $\beta$ (25-35) at day 4 acquired on Bruker 600 MHz in SDS micelles. The final pH was 7.4. NMR experiments were recorded at 25 °C.

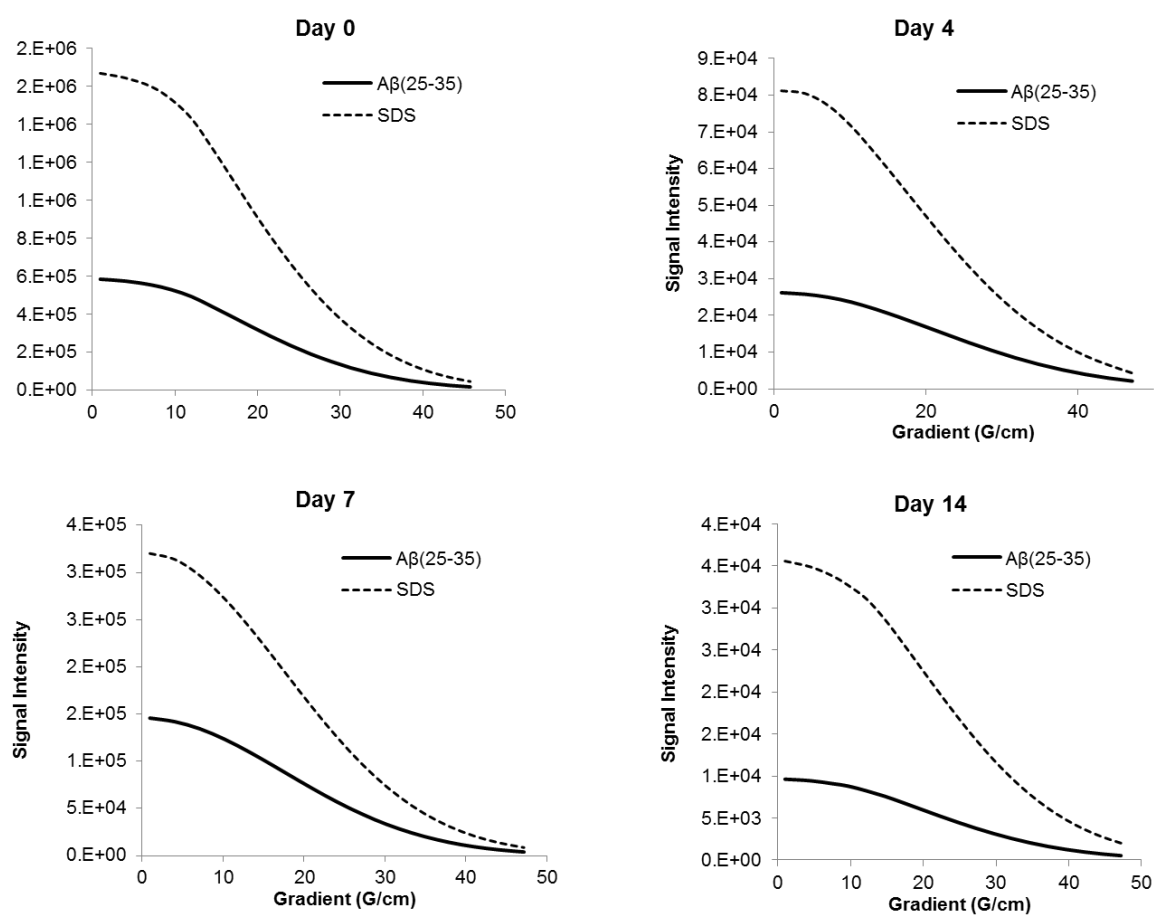

**Table S3:**  $^1\text{H}$  Chemical Shifts of A $\beta$ (25-35) at day 7 acquired on Bruker 600 MHz in SDS micelles. The final pH was 7.4. NMR experiments were recorded at 25 °C.

**Table S4:**  $^1\text{H}$  Chemical Shifts of A $\beta$ (25-35) at day 14 acquired on Bruker 600 MHz in SDS micelles. The final pH was 7.4. NMR experiments were recorded at 25 °C.

**Figure S7:** Ramachandran plot for each residue in the ensemble (50 models) of A $\beta$ (25-35) structures calculated from NMR 2D spectra in SDS (A-D) and in the ensemble (10 models) of A $\beta$ (1-40) in SDS as in PDB ID: 1BA4 (E).

**Figure S1:** Pseudo 2D DOSY of A $\beta$ (25-35) in SDS with 1,4-dioxane as a reference recorded at day 0 and here reported as example.

**Figure S2:** Intensities of A $\beta$ (25-35) (continuous line) and SDS (dashed line) signals plotted in function of the gradient strength as recorded from DOSY experiments at days 0, 4, 7 and 14.

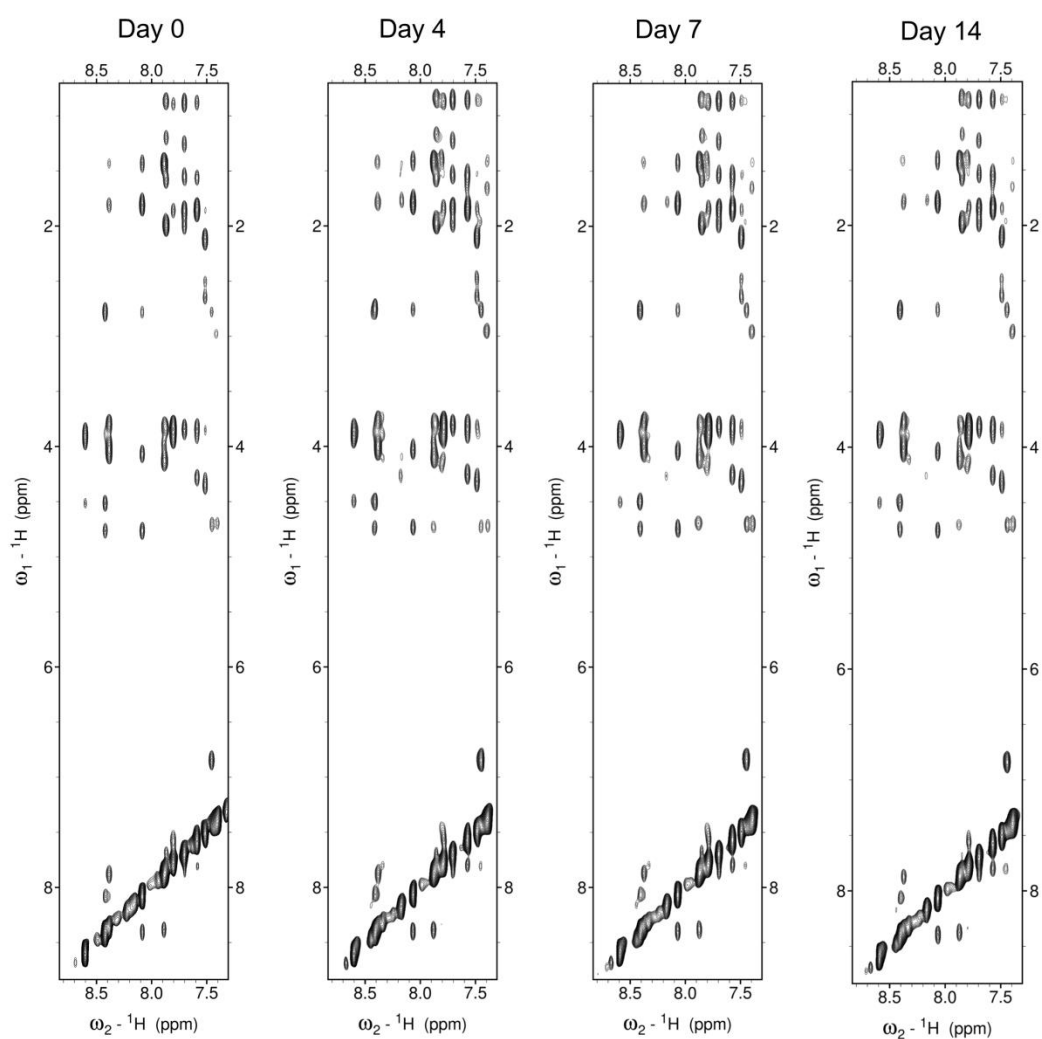

**Figure S3:** 1D <sup>1</sup>H spectra of Aβ(25-35) recorded at days 0 (black), 4 (red), 7 (green) and 14 (blue) on Bruker 600 MHz in SDS micelles.

**Figure S4:** High-field region (0-4.4 ppm) of 1D  $^1\text{H}$  spectra of A $\beta$ (25-35) recorded at days 0 (black), 4 (red), 7 (green) and 14 (blue) on Bruker 600 MHz in SDS micelles.

**Figure S5:** Low-field region (6-8.7 ppm) of 1D <sup>1</sup>H spectra of Aβ(25-35) recorded at days 0 (black), 4 (red), 7 (green) and 14 (blue) on Bruker 600 MHz in SDS micelles.

**Figure S6:** Low-field strips (7.4-8.8 ppm) of 2D-NOESY spectra of Aβ(25-35) recorded at days 0, 4, 7 and 14 on Bruker 600 MHz in SDS micelles.

**Table S1:** <sup>1</sup>H Chemical Shifts of Aβ(25-35) at day 0 acquired on Bruker 600 MHz in in SDS micelles. The final pH was 7.4. NMR experiments were recorded at 25 °C.
