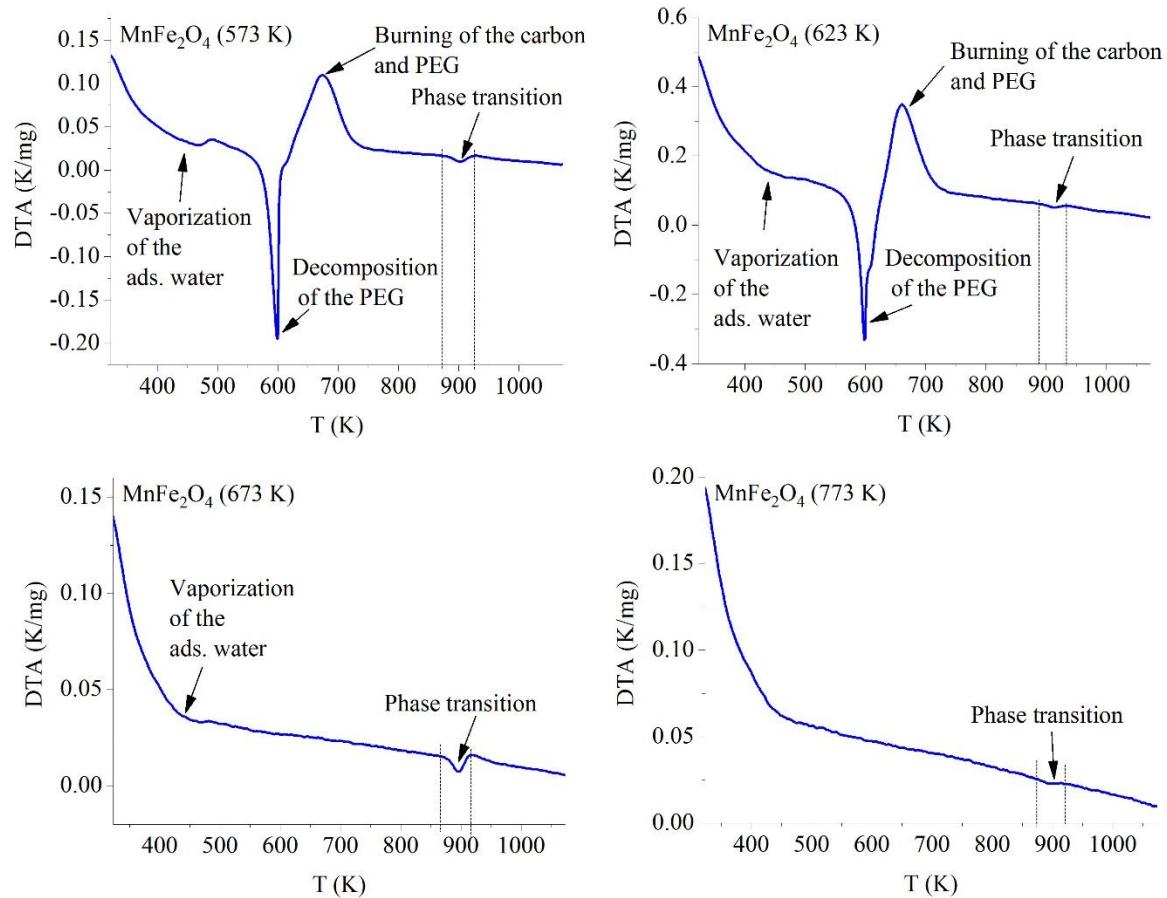

**Figure S1.** HRTEM images of the manganese ferrite samples synthetised at 573K, 623K, 673K, and 773K.

**Figure S2.** Box plot diagrams of the particle sizes in the manganese ferrite magnetic nanoparticles synthetized at 573K, 623K, 673K, and 773K. The particle sizes were obtained from the analysis of TEM images.

**Figure S3.** HRTEM picture of the MnFe<sub>2</sub>O<sub>4</sub> sample.

**Figure S4.** TDA curves of the manganese ferrite samples.

**Table S1.** Comparison of the coercivity, saturation magnetization, crystallite and particle size of the different ferrite nanoparticles.

Formula of ferrite	Coercivity Hc (Oe)	Ms (emu/g)	Crystallite size by XRD (nm)	Particle size by TEM (nm)	References
