Supplementary Figures

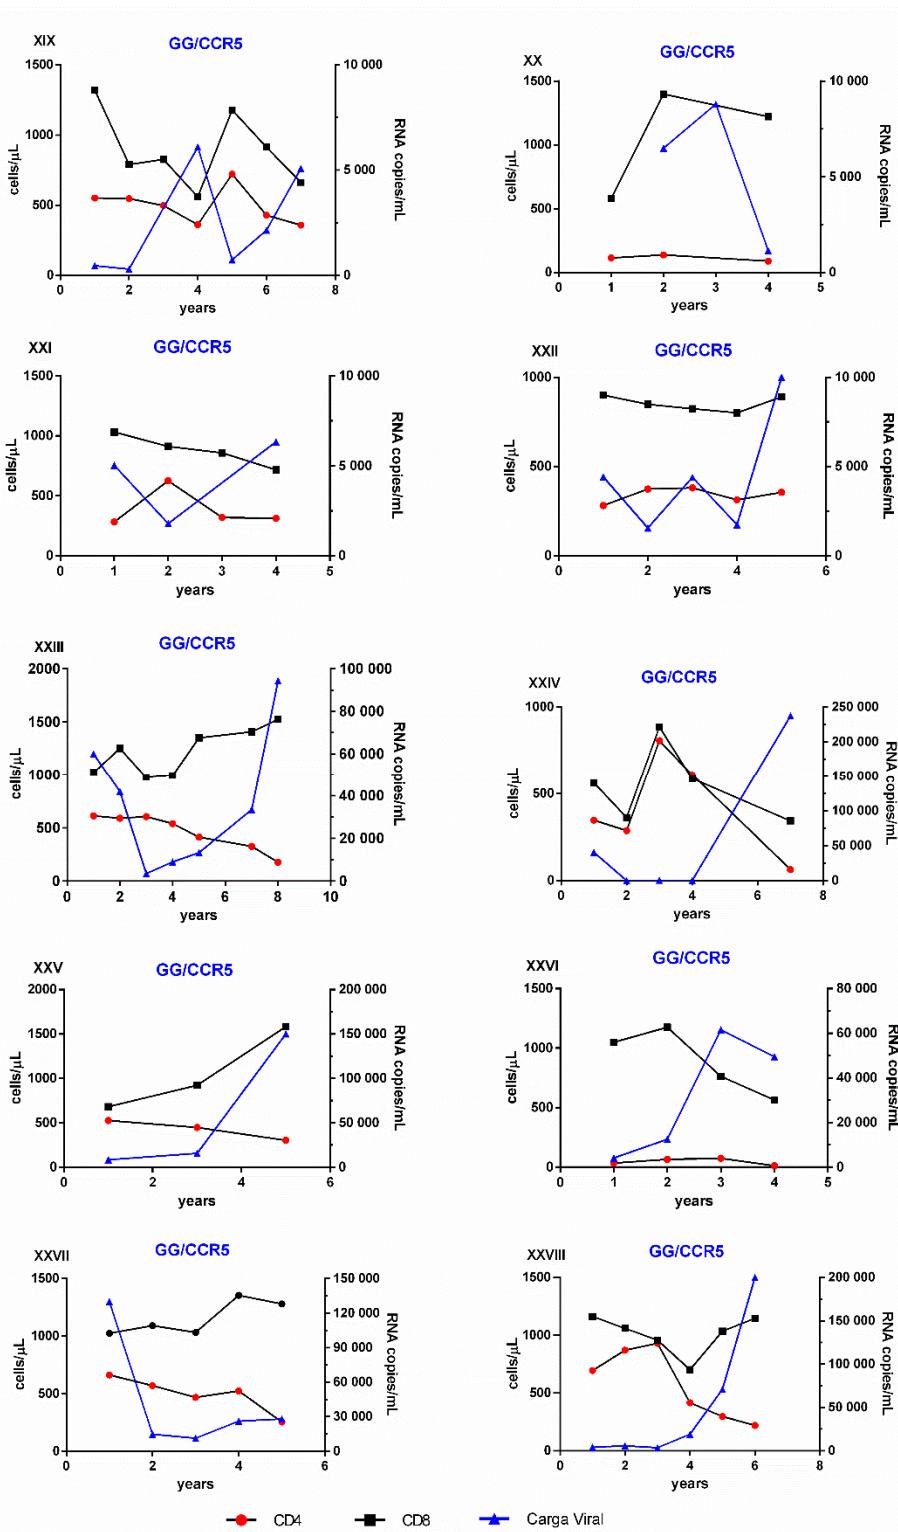

Supplementary Figure S1. Evolution of CD4 $^{+}$ TL and CD8 $^{+}$ TL counts and HIV-1 plasma viral load from the year of diagnosis or the first available quantification among viremia controller 1 (VC1). AA: homozygous mutant for the SDF1-3'A variant. GG: wild homozygous for the SDF1-3'A.

Supplementary Figure S2. Evolution of CD4⁺ TL and CD8⁺ TL quantification and HIV-1 plasma viral load from the year of diagnosis or the first available quantification among viremia controller 2 (VC2). GA: heterozygous for the *SDF1-3'A* variant. GG: wild homozygous for the *SDF1-3'A*.

Supplementary Figure S3. Evolution of CD4⁺ TL and CD8⁺ TL quantification and HIV-1 plasma viral load, from the year of diagnosis or the first available quantification among viremia non-controllers (NC). AA: homozygous mutant for the *SDF1-3'A* variant. GA: heterozygous for the *SDF1-3'A* variant; Δ32: presence of the CCR5Δ32 variant.

Supplementary Figure S3 (cont.). Evolution of CD4⁺ TL and CD8⁺ TL quantification and HIV-1 plasma viral load, from the year of diagnosis or the first available quantification among viremia non-controllers (NC). AA: homozygous mutant for the *SDF1-3'A* variant. GA: heterozygous for the *SDF1-3'A* variant; Δ32: presence of the *CCR5Δ32* variant.
