

File S3. Supplementary data.

Table S1. Independent variables of regression analysis with Eyes-Hands-Feet (EHF) score as dependent variable in study participants disabled through leprosy.

Dependent Variable	Independent variables		Collinearity	
	beta	P	VIF	Tolerance
Gender (0 female, 1 male)	-0.009	0.912	1.033	0.968
Age	0.340	<0.001	1.000	1.000
Time after RFT (years)	0.118	0.174	1.109	0.902
Income (INR/M)	-0.078	0.360	1.060	0.944
Living space (qm ²)	-0.276	0.001	1.000	1.000
VIF – Variance inflation factors; RFT – release from treatment; INR/M – Indian rupee per month.				

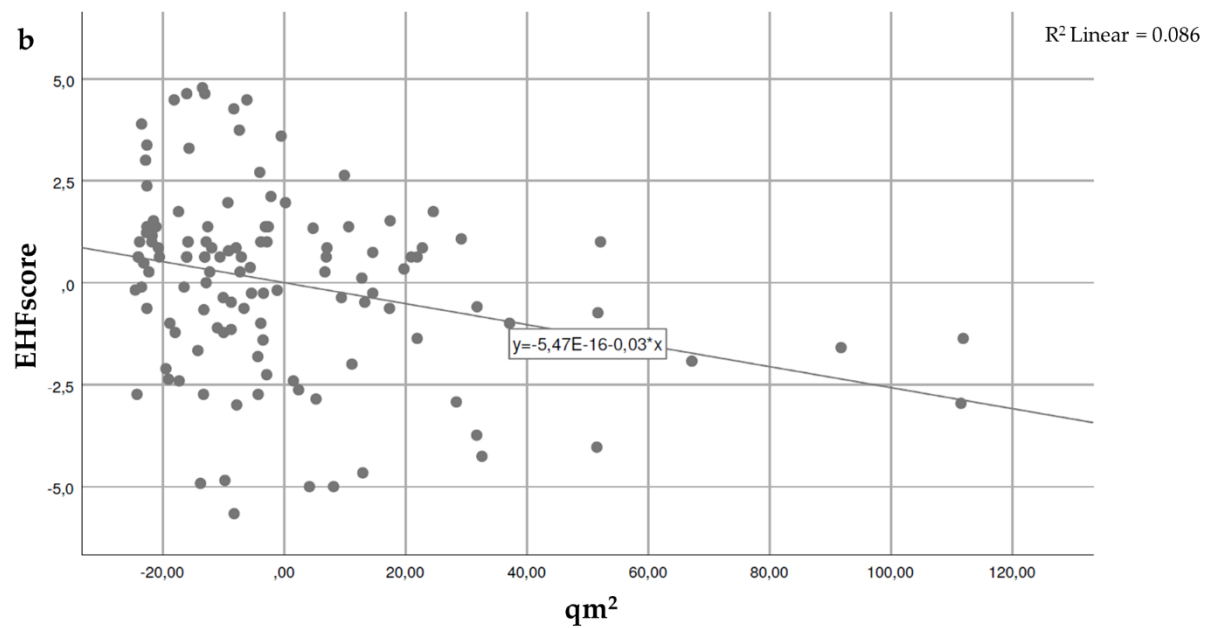

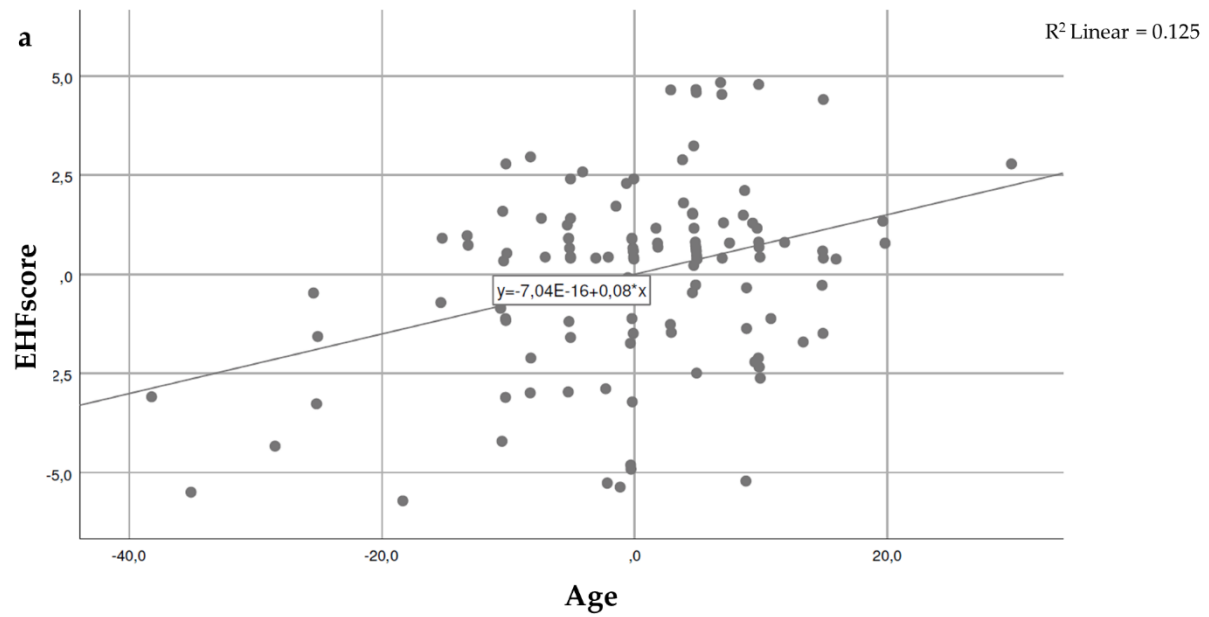

Figure S1. Linear regression plots to depict the relationship between the EHF score, **a)** age, and **b)** living space in leprosy affected study participants.
