

Supplementary Materials: Cold Weather Conditions and Risk of Hypothermia Among People Experiencing Homelessness: Implications for Prevention Strategies

Table S1. Odds ratios for the association between a 5 °C drop in the mean hourly wind chill and hypothermic injury or death ($n = 97$ events) ^a.

Meteorological Variables	Unadjusted Odds Ratio (95% CI)	Adjusted Odds Ratio (95% CI) ^{b, c}
Minimum Temperature (per 5 °C decrease)	1.41 (1.19–1.66)	1.49 (1.25–1.77)
Precipitation (mm) ^c	1.07 (1.01–1.13)	1.10 (1.03–1.17)

^a: Conditional logistic regression models; ^b: Adjusted models include the mean hourly wind chill and precipitation; ^c: Models with precipitation have 96 events due to missing data at one event date.
