

Spatial and seasonal variation of the physicochemical parameters determined in Selho river

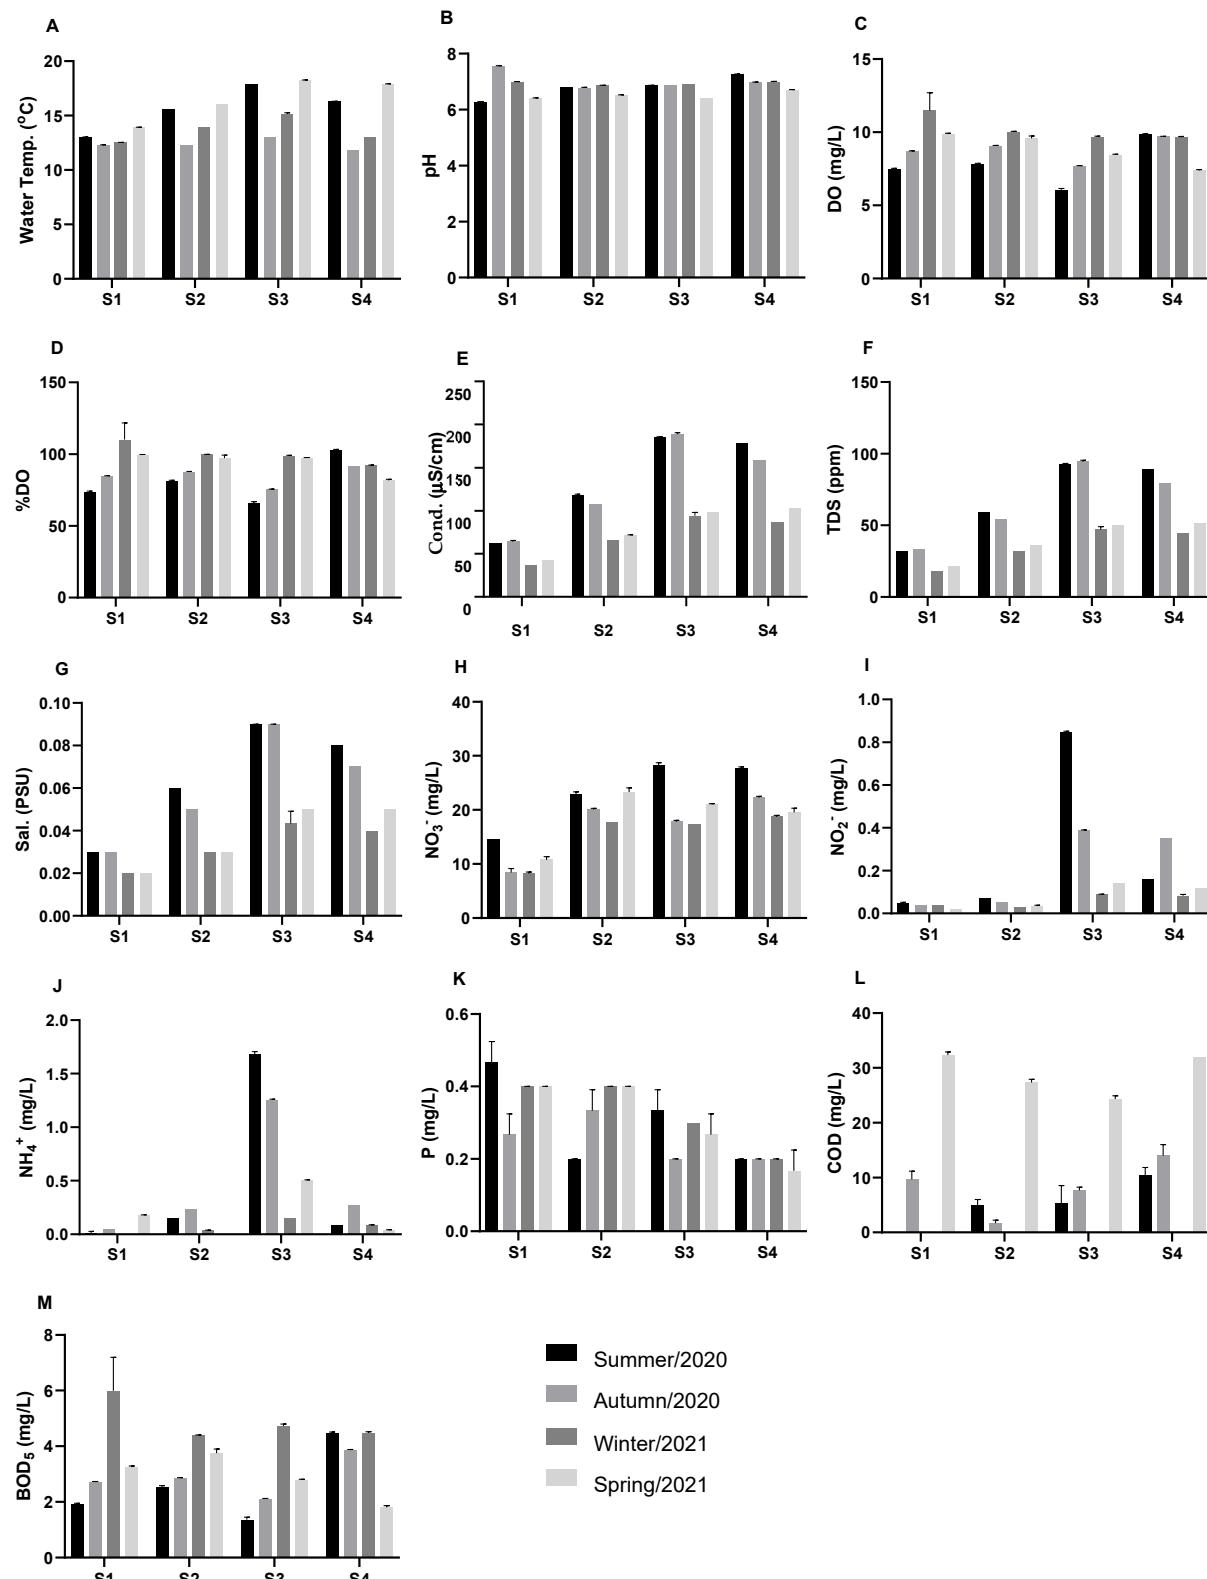

Figure S1. Spatial and seasonal variation of the physicochemical parameters determined at the sampling sites of Selho river (S1 to S4) in different seasons (summer and autumn of 2020, winter and spring of 2021). **A** Water temperature, Water Temp.; **B** pH; **C**

Dissolved oxygen concentration, DO; **D** Percent saturation of dissolved oxygen, %DO; **E** Conductivity, Cond.; **F** Salinity, Sal.; **G** Total dissolved solids, TDS; **H** nitrates, NO_3^- ; **I** Nitrites, NO_2^- ; **J** Ammonium ion, NH_4^+ ; **K** Total phosphorus, P; **L** Chemical oxygen demand, COD; **M** Biochemical oxygen demand, BOD_5 . Data are presented as mean \pm standard deviation.

Spatial and seasonal variation of the physicochemical parameters determined in Costa-Couros river

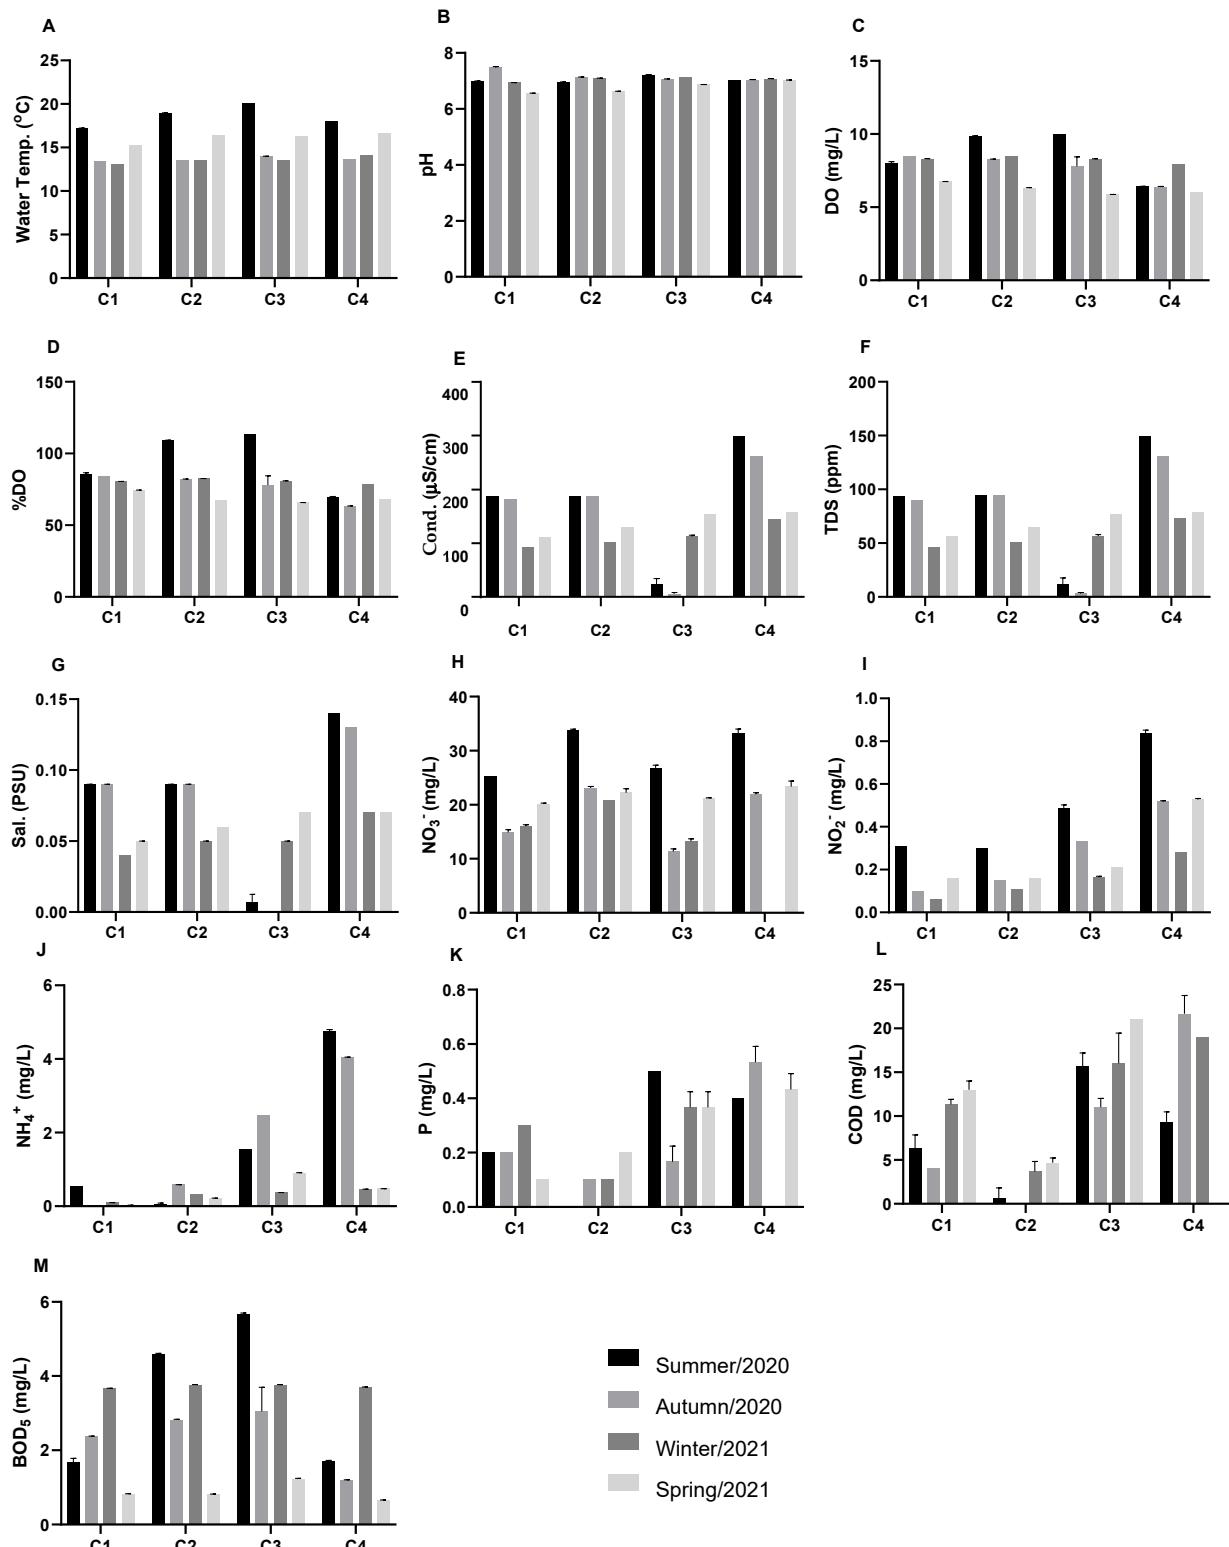

Figure S2. Spatial and seasonal variation of the physicochemical parameters determined at the sampling sites of Costa-Couros river (C1 to C4) in different seasons (summer and autumn of 2020, winter and spring of 2021). **A** Water temperature, Water Temp.; **B** pH; **C** Dissolved oxygen concentration, DO; **D** Percent saturation of dissolved oxygen, %DO; **E** Conductivity, Cond.; **F** Salinity, Sal.; **G** Total dissolved solids, TDS; **H** nitrates, NO_3^- ; **I** Nitrites, NO_2^- ; **J** Ammonium ion, NH_4^+ ; **K** Total phosphorus, P; **L** Chemical oxygen demand, COD; **M** Biochemical oxygen demand, BOD_5 . Data are presented as mean \pm standard deviation.

Two-way ANOVA applied to the physicochemical parameters

Table S1. Results from the two-way ANOVA applied to the physicochemical parameters determined in Selho and Costa-Couros rivers: water temperature (Temp., °C), pH, dissolved oxygen concentration (DO, mg O₂/L), percent saturation of dissolved oxygen (%DO), conductivity (Cond., µS/cm), salinity (Sal., PSU), total dissolved solids (TDS, mg/L), nitrates (NO₃⁻, mg/L), nitrites (NO₂⁻, mg/L), ammonium ion (NH₄⁺, mg/L), total phosphorus (P, mg/L), chemical oxygen demand (COD, mg/L) and biochemical oxygen demand (BOD₅, mg/L). A significance level of 0.05 was considered for all tests.

		Spatial differences		Seasonal differences		Interaction	
		% of total variation	ANOVA Summary	% of total variation	ANOVA Summary	% of total variation	ANOVA Summary
