## Supplemental Information

### 1. Mechanism performance for ethylene

#### 1.1 Shock tube ignition delay times of ethylene

##### 1.1.1 Hidaka *et al.* experimental data[1]

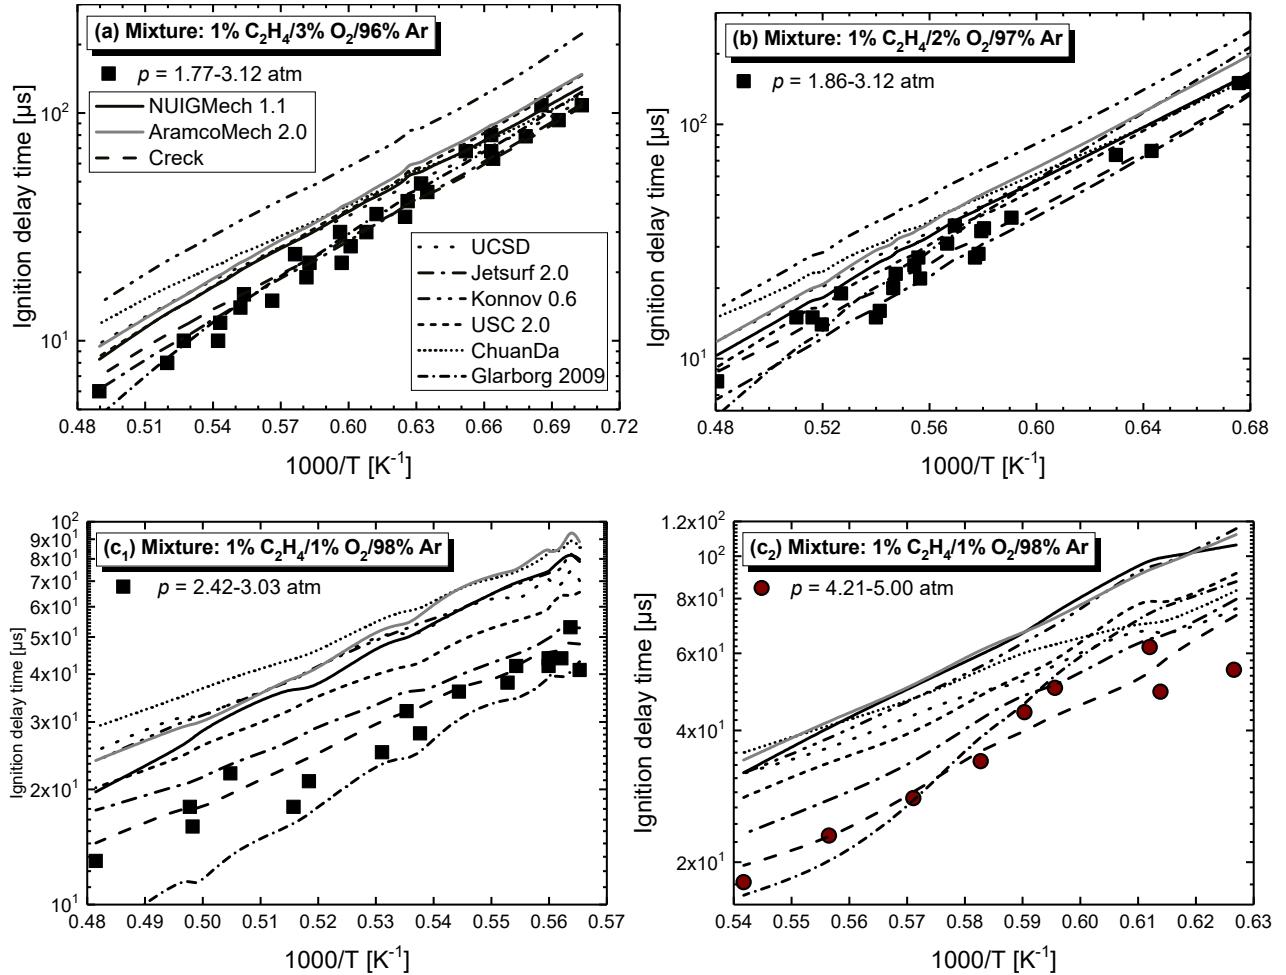

Figure S1: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 1.1.2 Brown and Thomas experimental data[2]

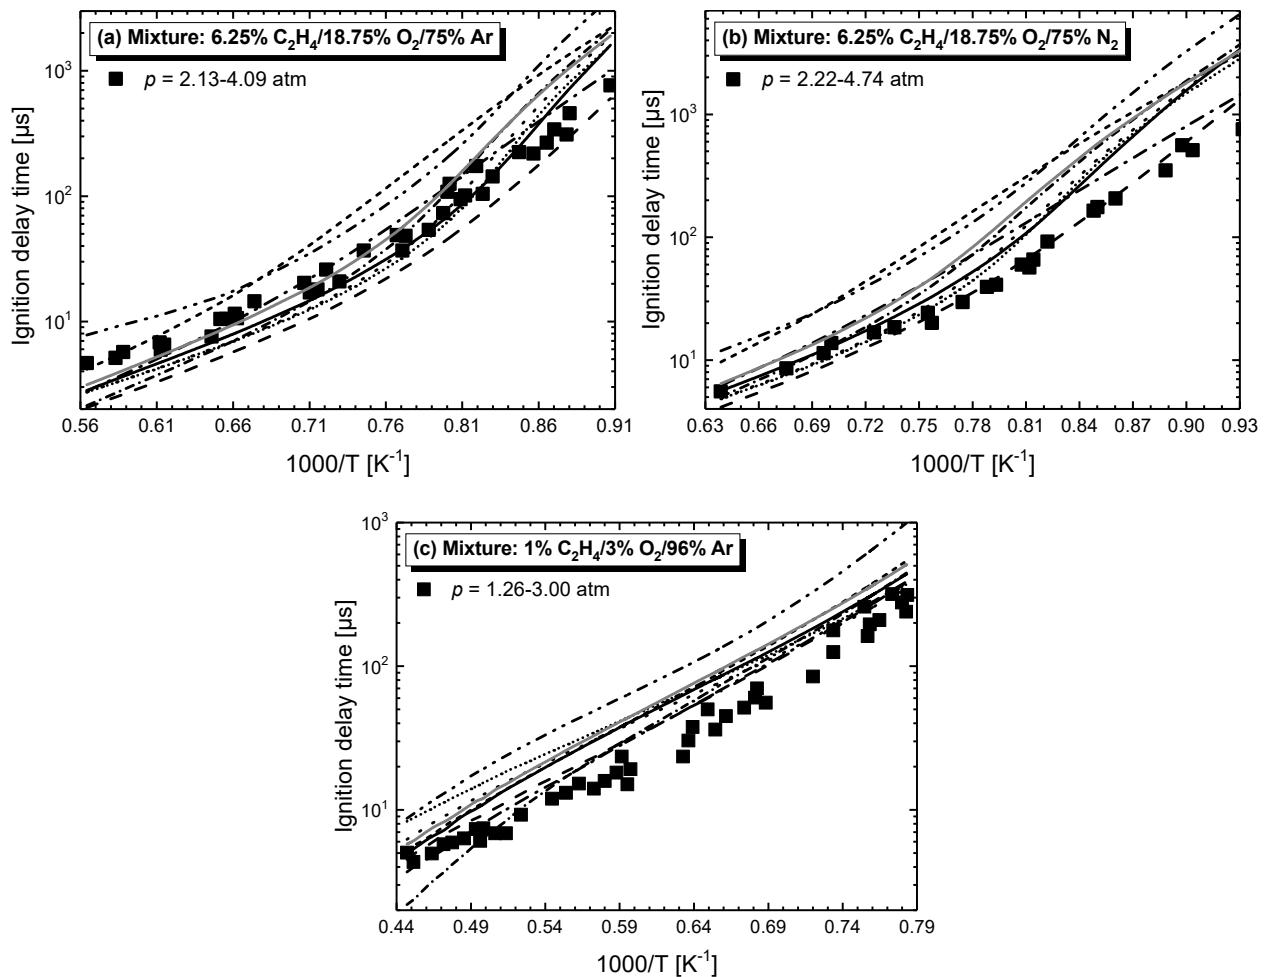

Figure S2: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 1.1.3 Collect and Spadaccini experimental data[3]

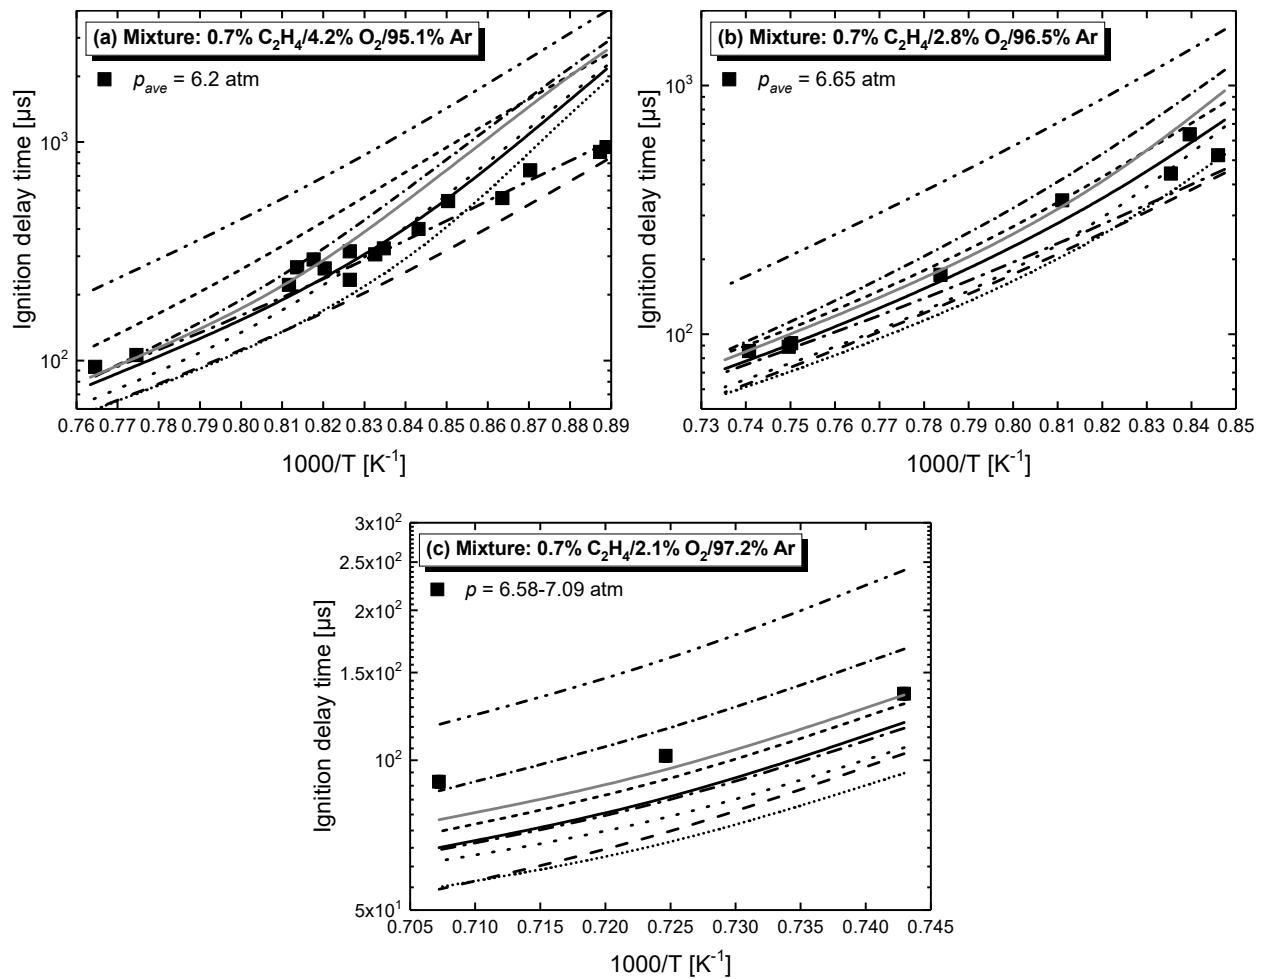

Figure S3: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

#### 1.1.4 Horning experimental data (Stanford)[4]

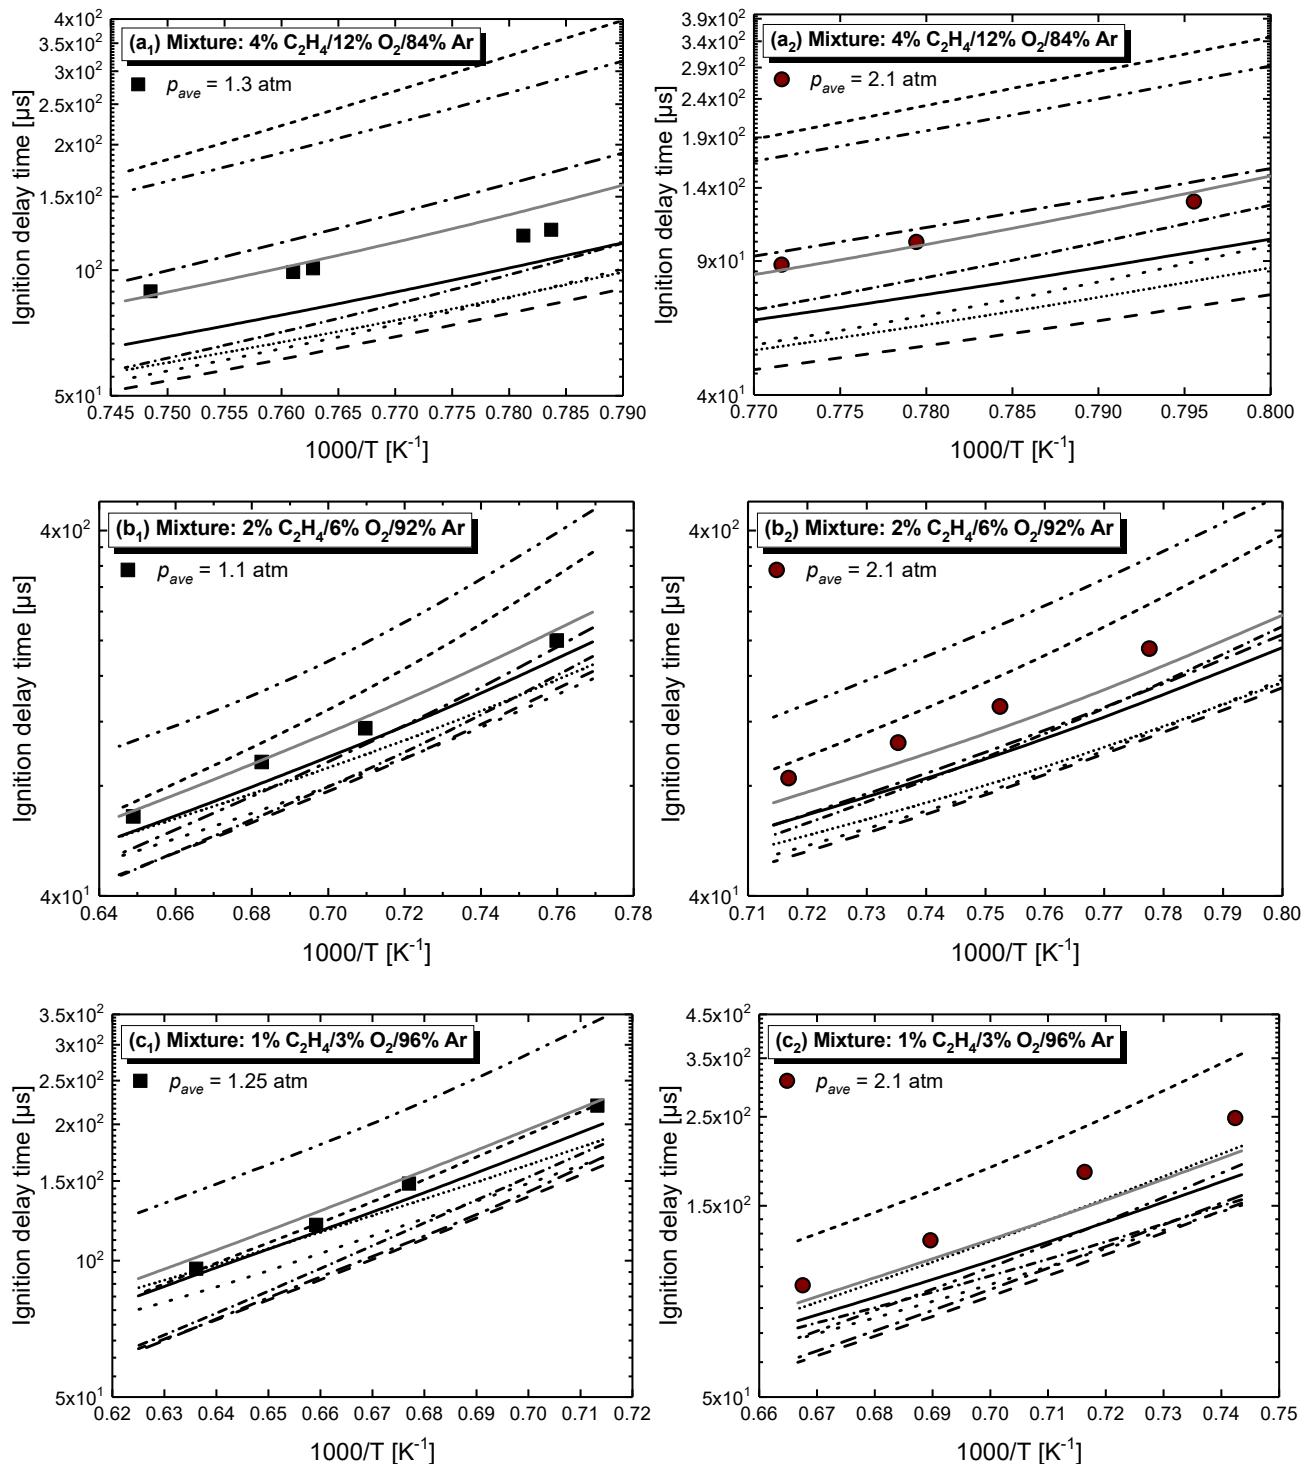

Figure S4: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 1.1.5 Kalitan et al. experimental data[5]

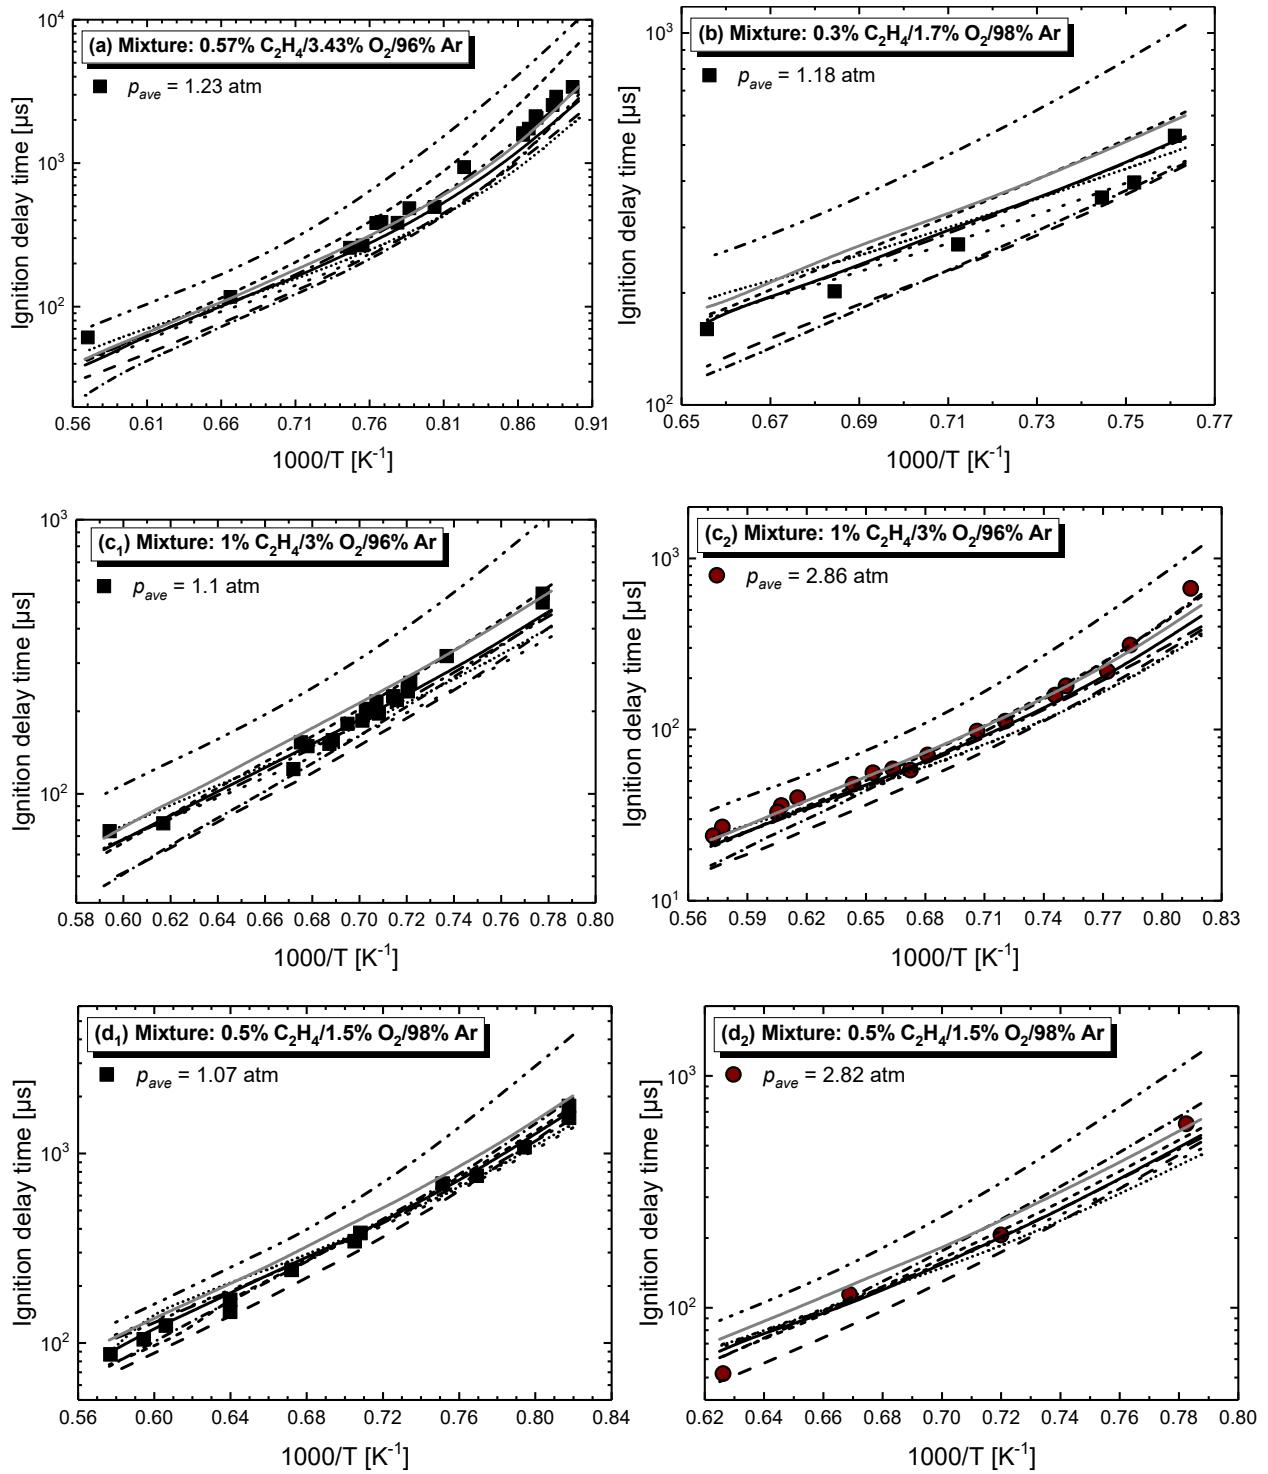

Figure S5: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 1.1.6 Penyazkov et al. experimental data[6]

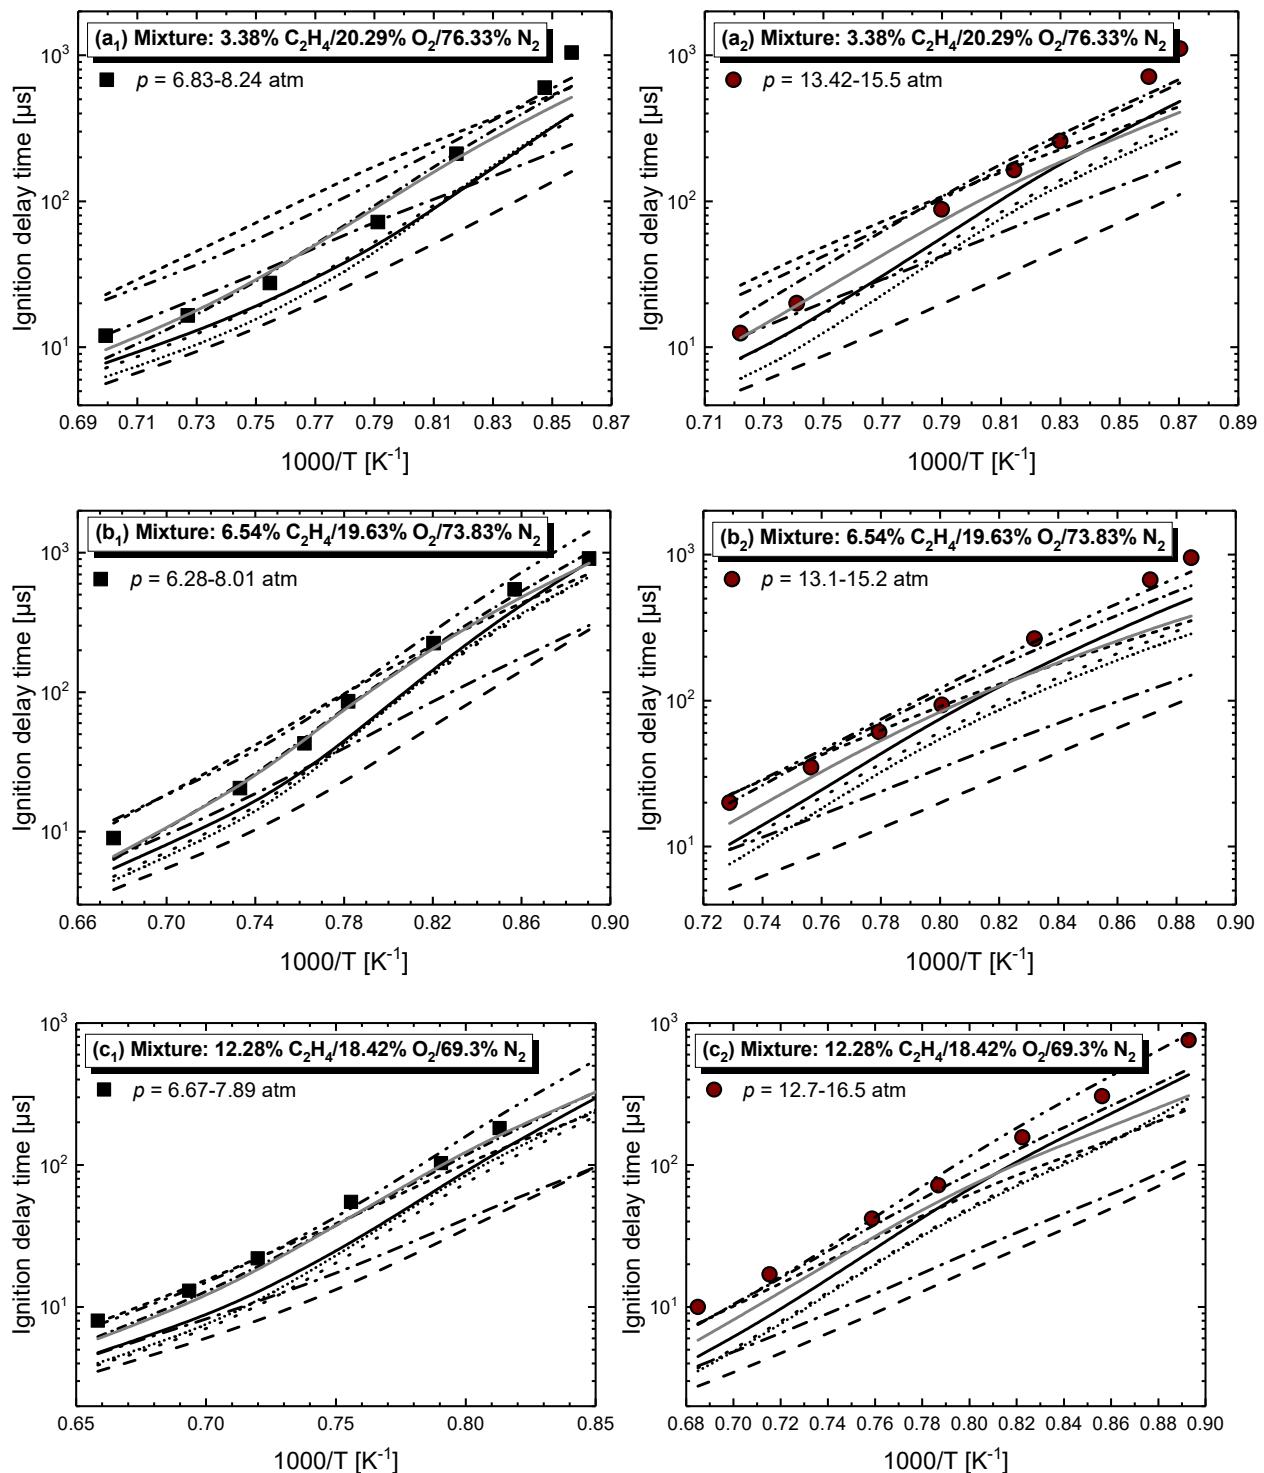

Figure S6: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

1.1.7 Tereza et al. experimental data[7]

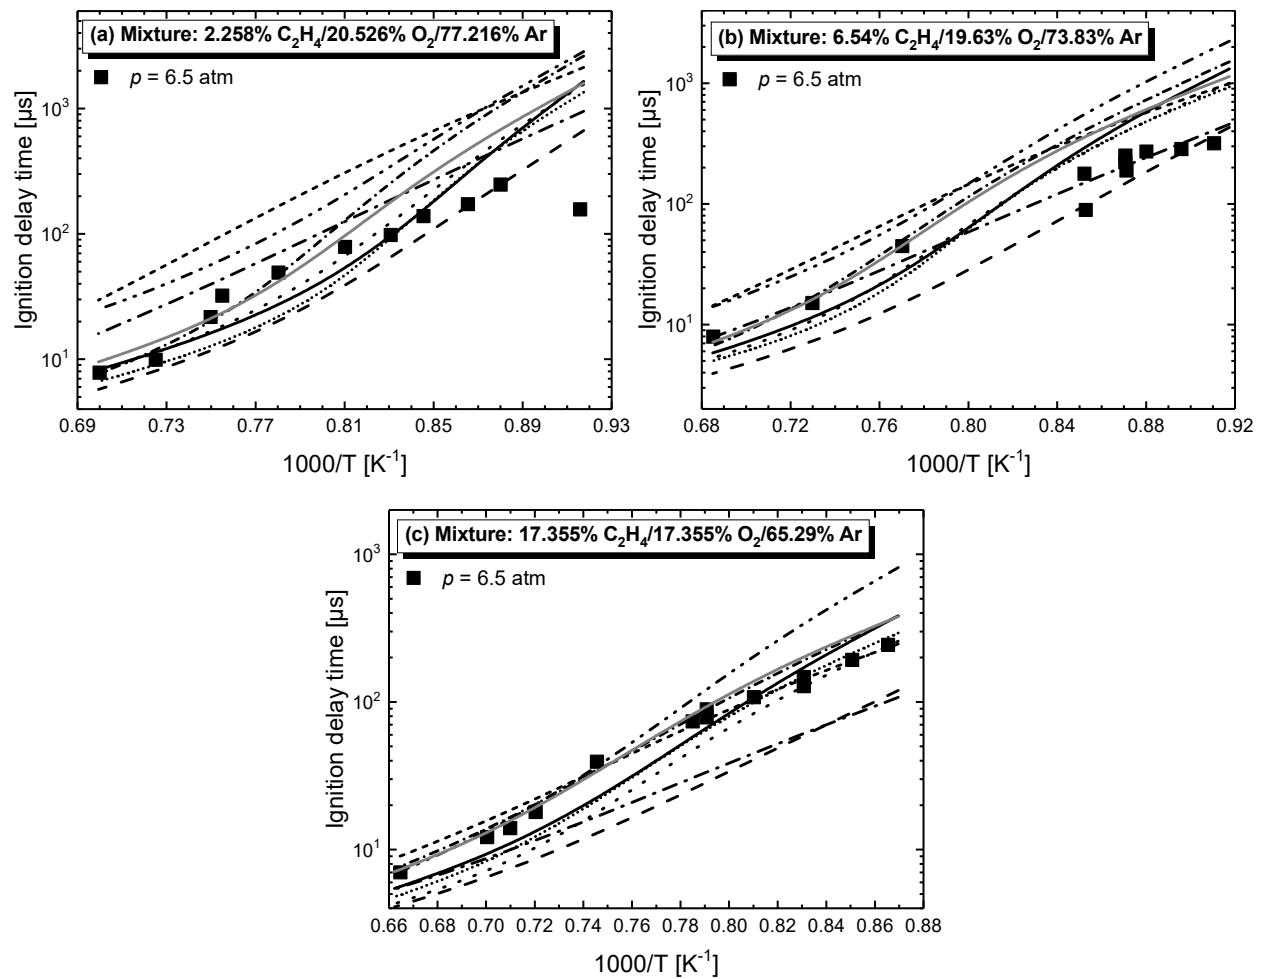

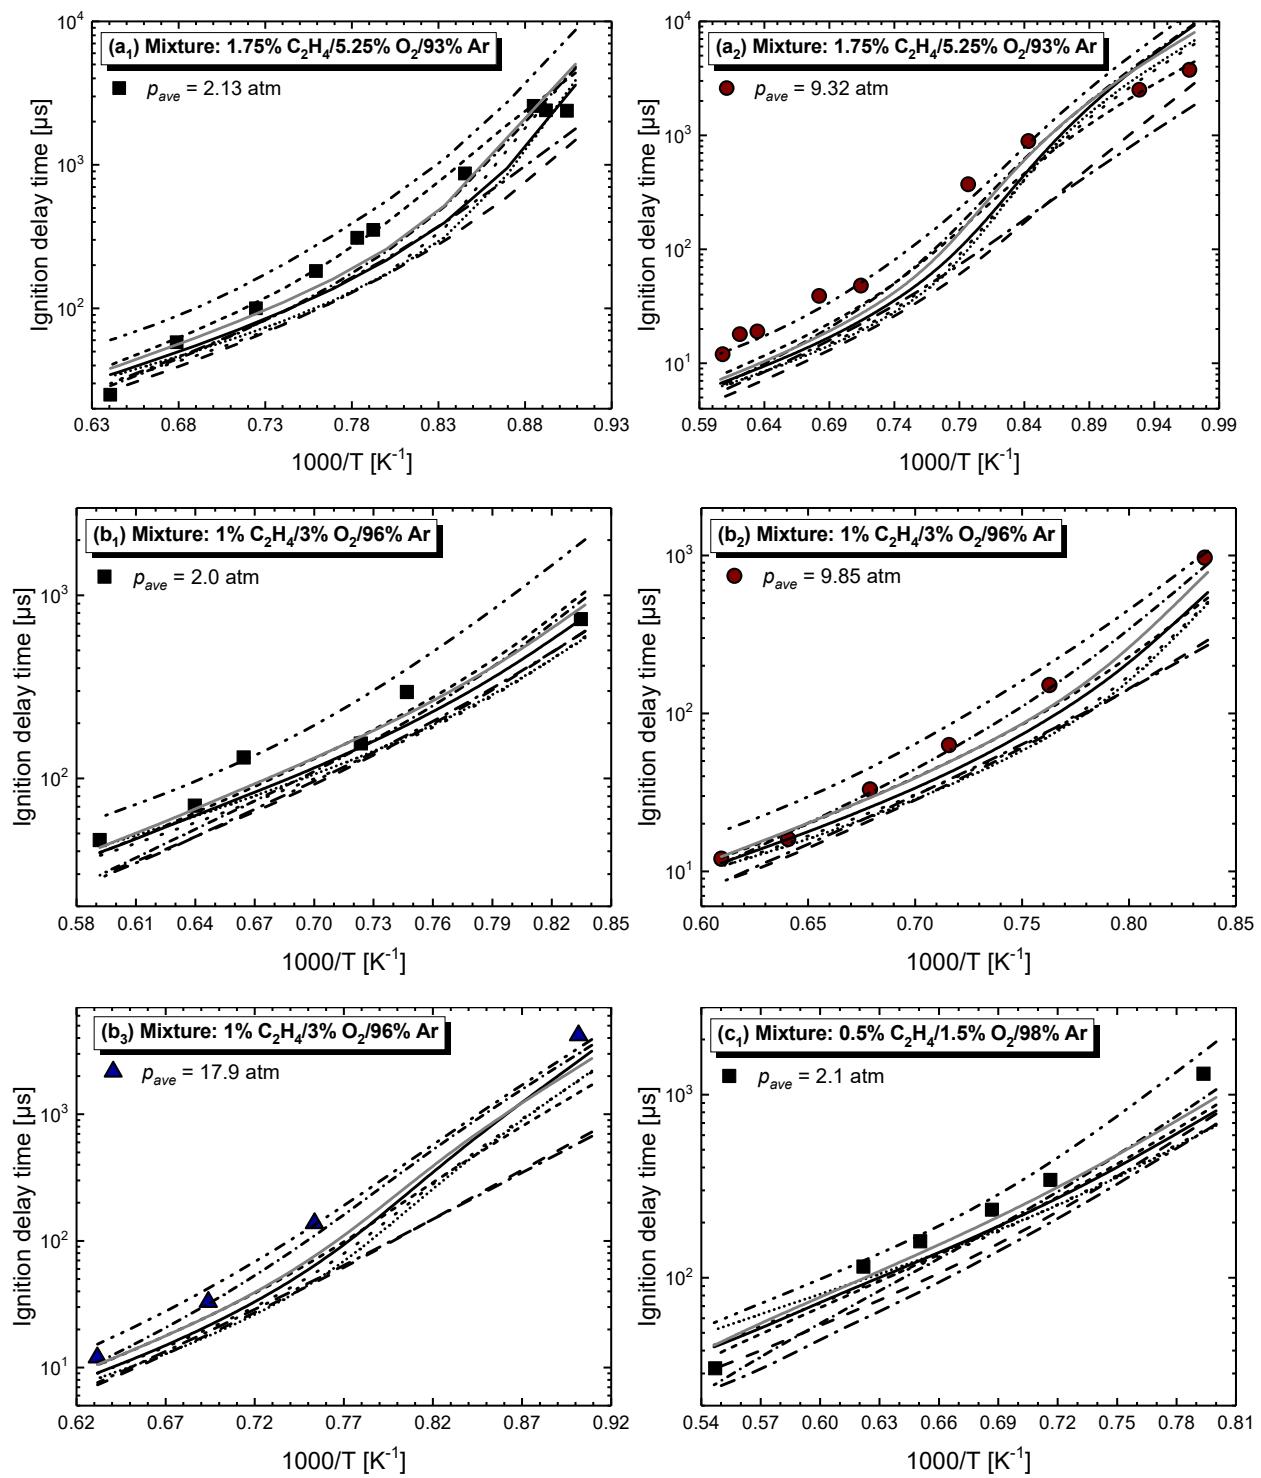

Figure S7: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 1.1.8 Saxena et al. experimental data[8]

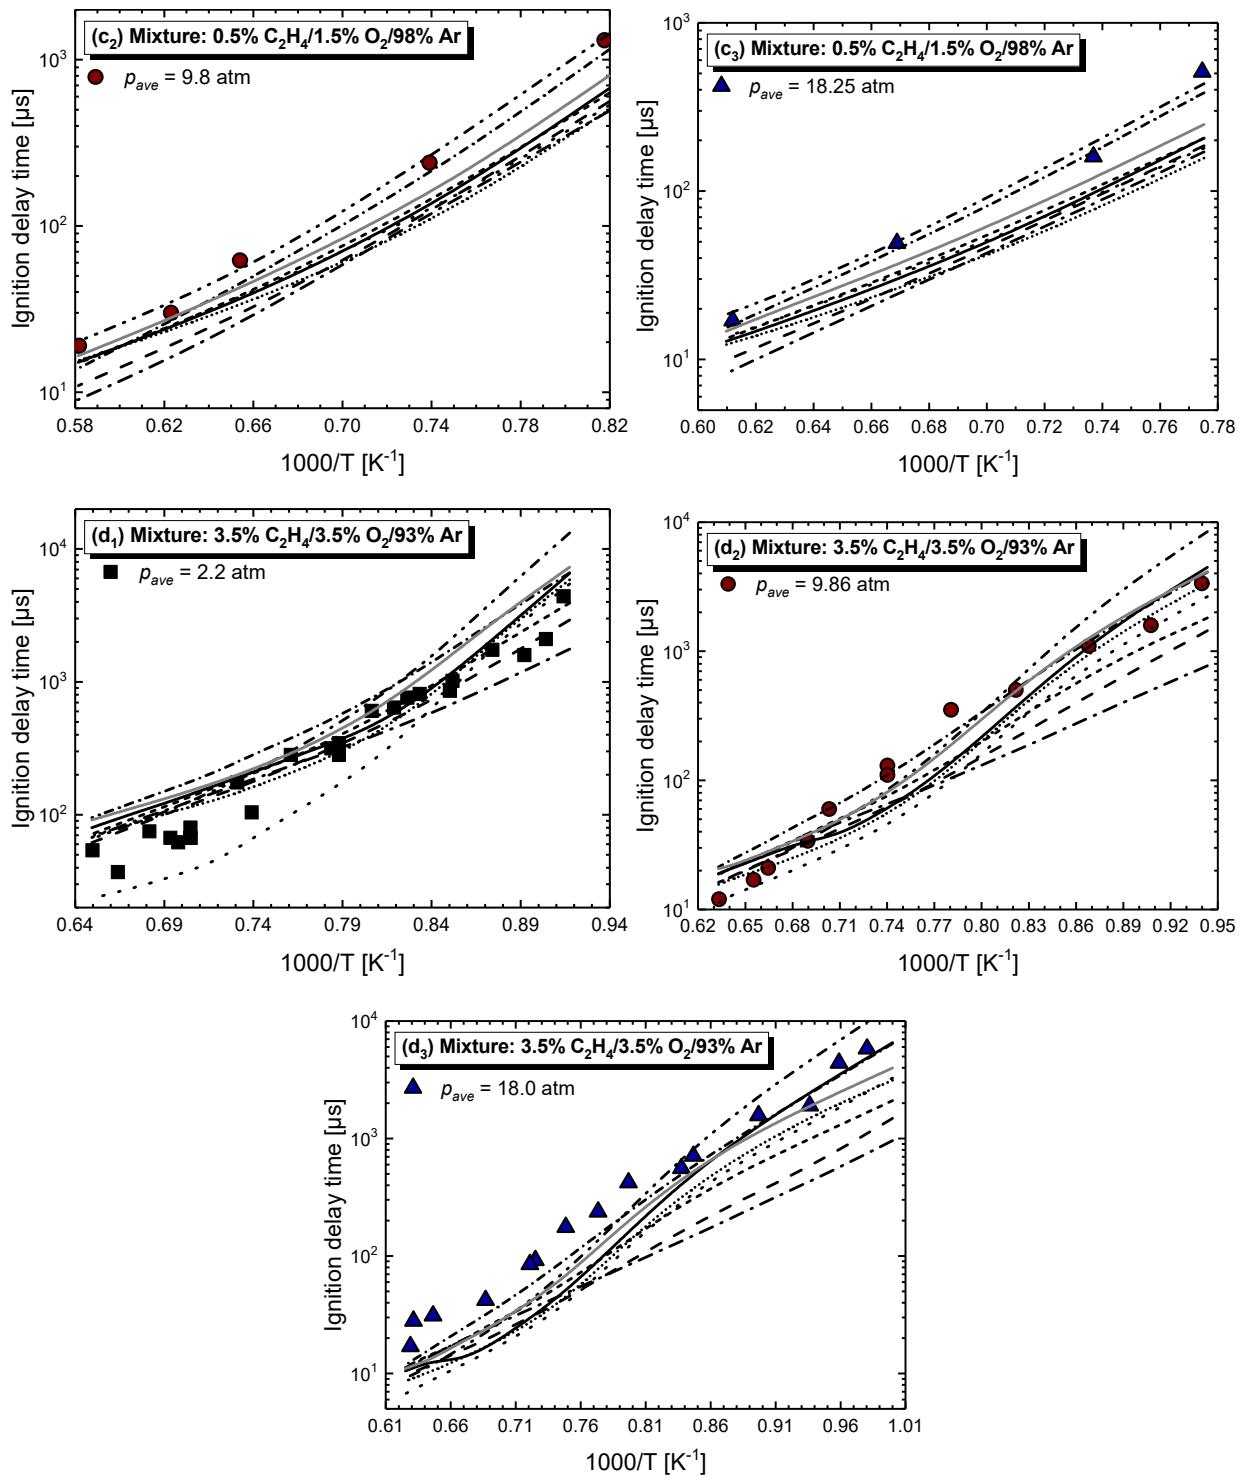

Figure S8: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

1.1.9 Davidson *et al.* experimental data[9]

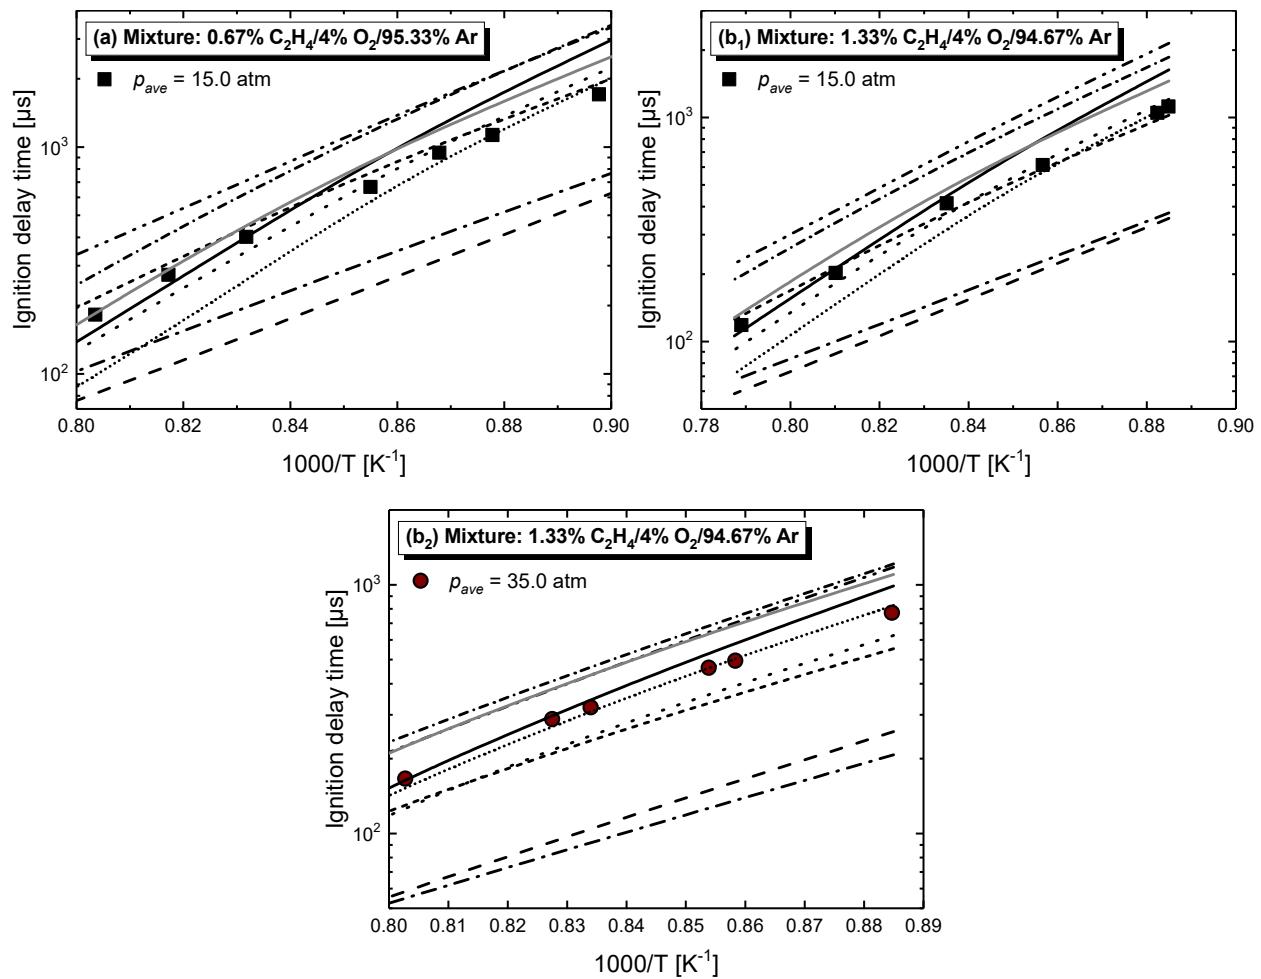

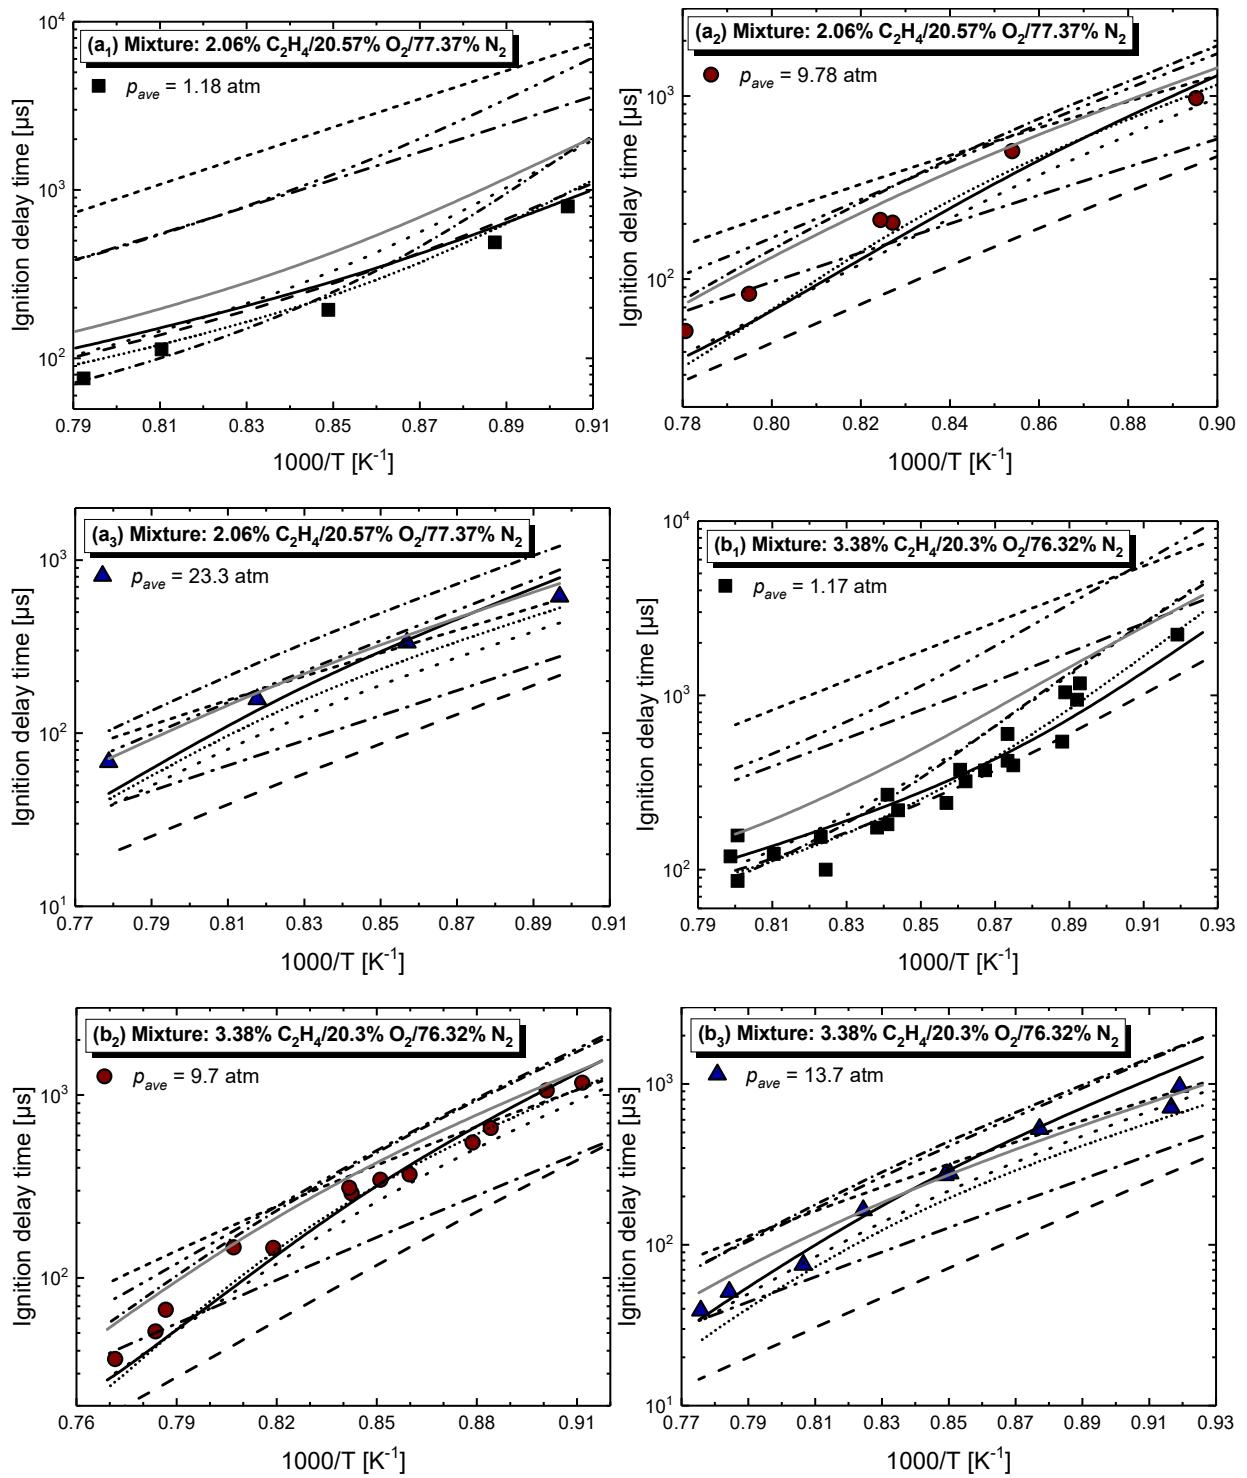

Figure S9: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

1.1.10 Kopp et al. experimental data[10]

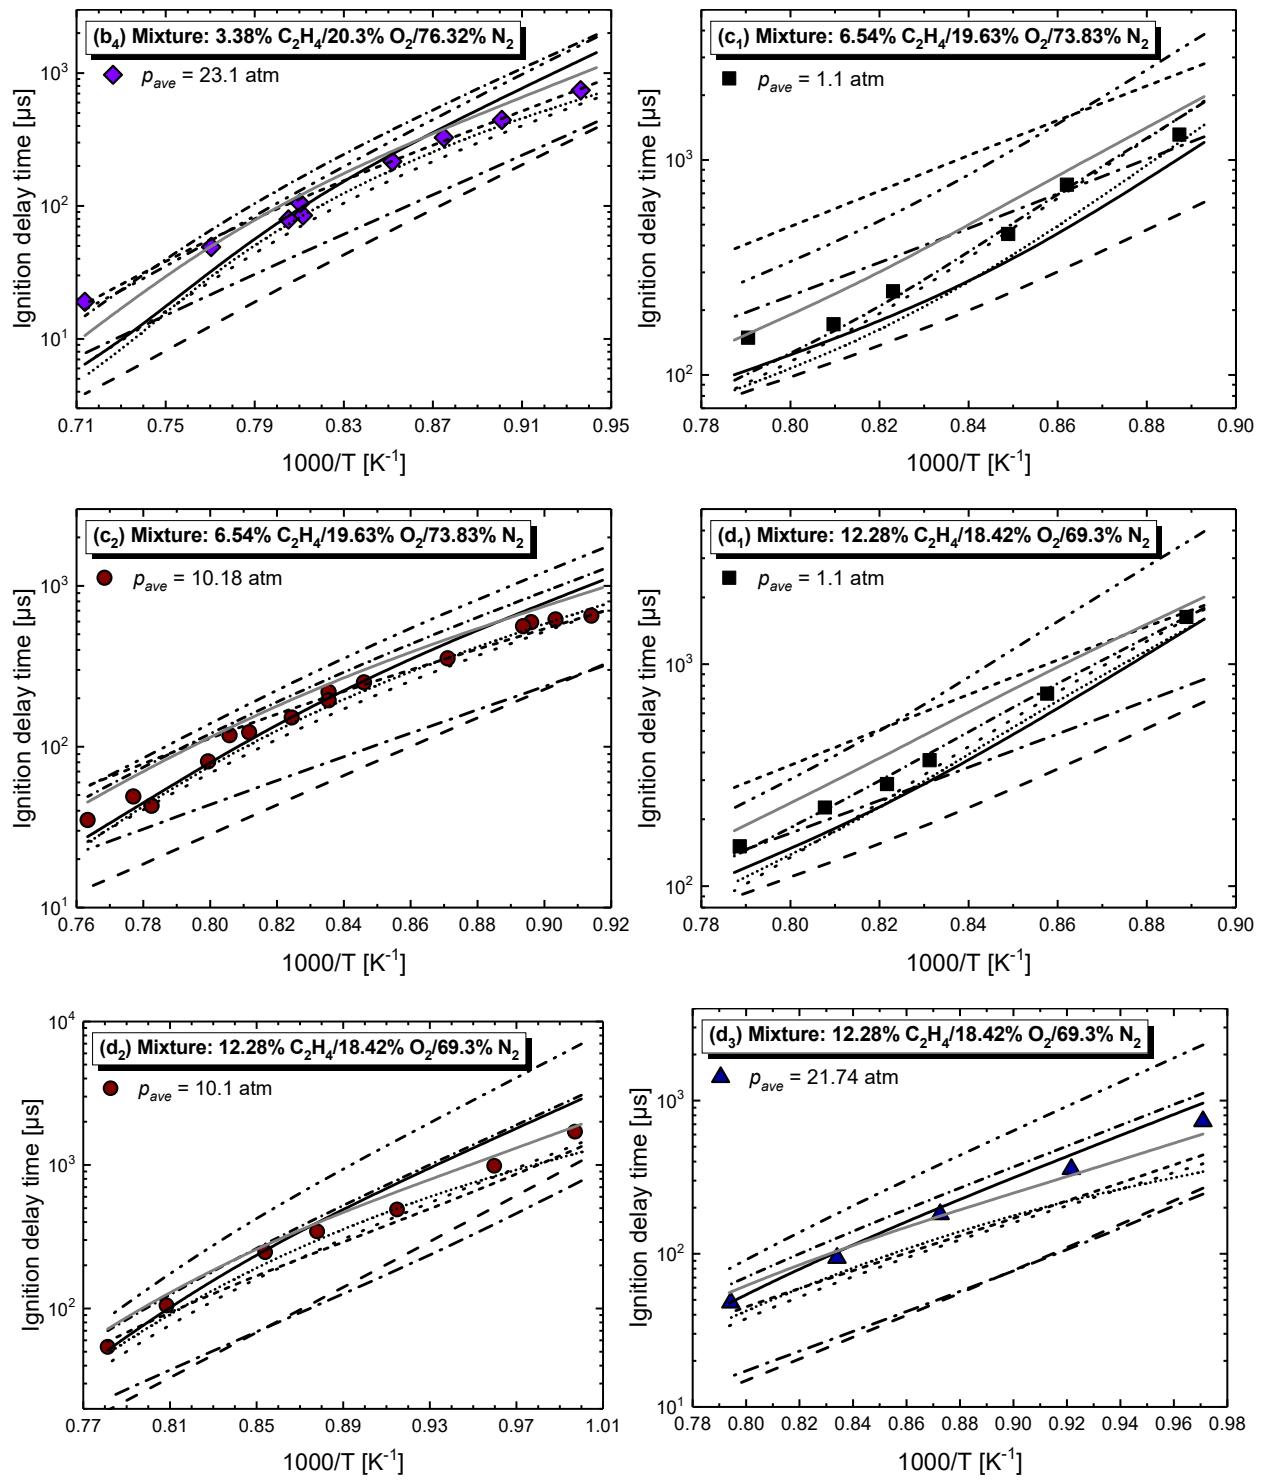

Figure S10: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

1.1.11 Mathieu et al. experimental data[11]

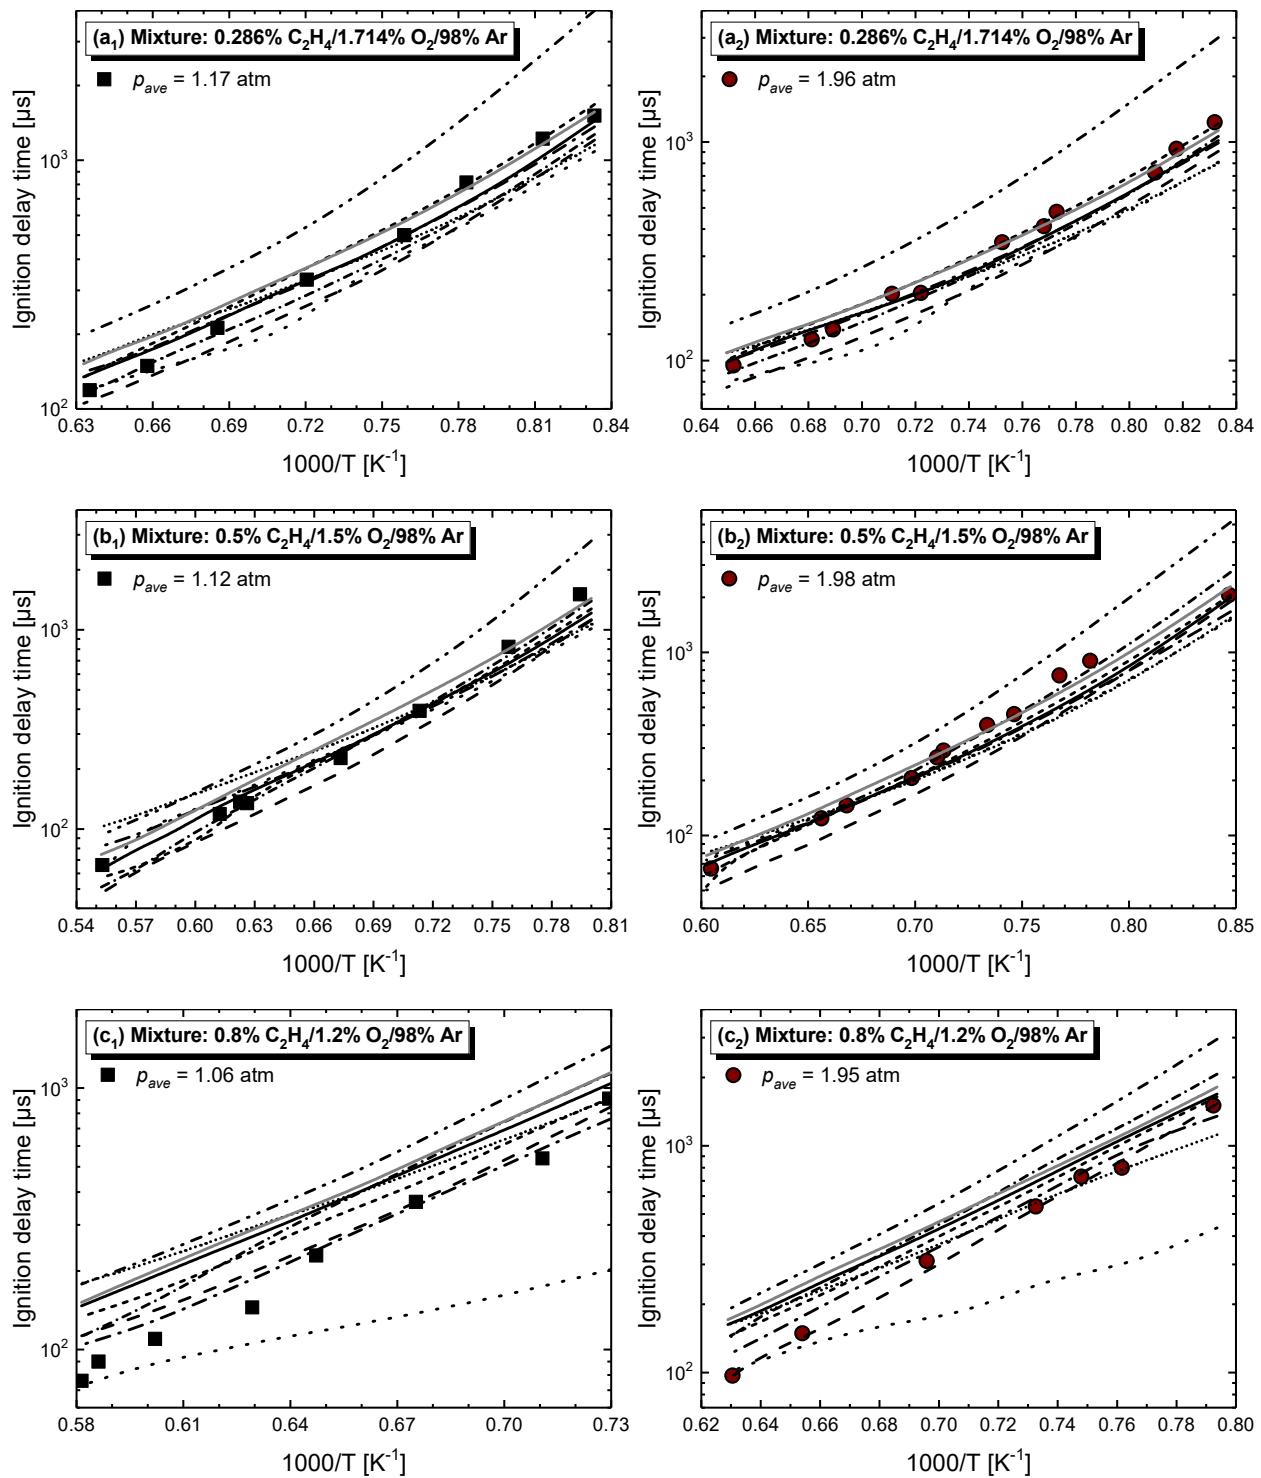

Figure S11: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 1.1.12 Xiong et al. experimental data[12]

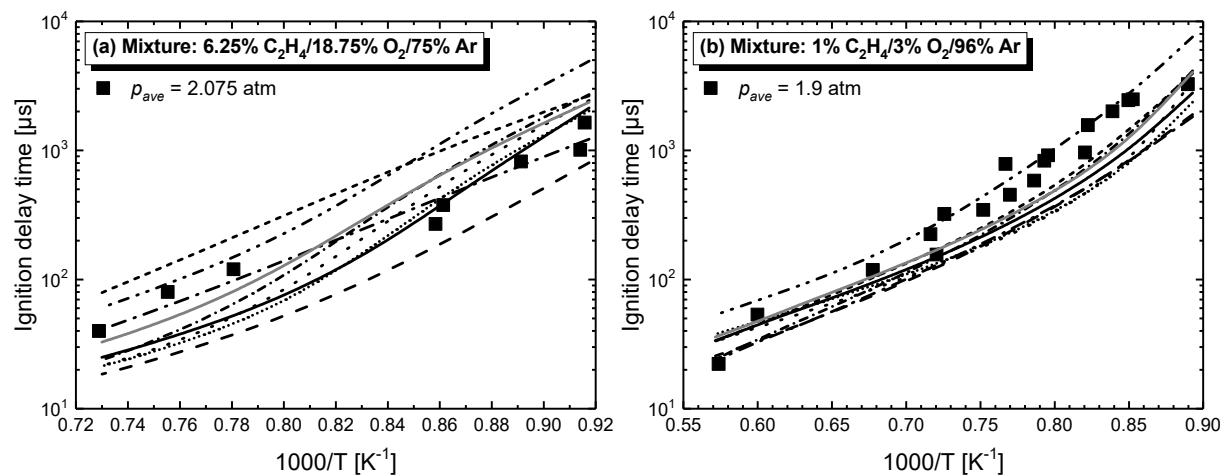

Figure S12: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 1.1.13 Shao et al. experimental data[13]

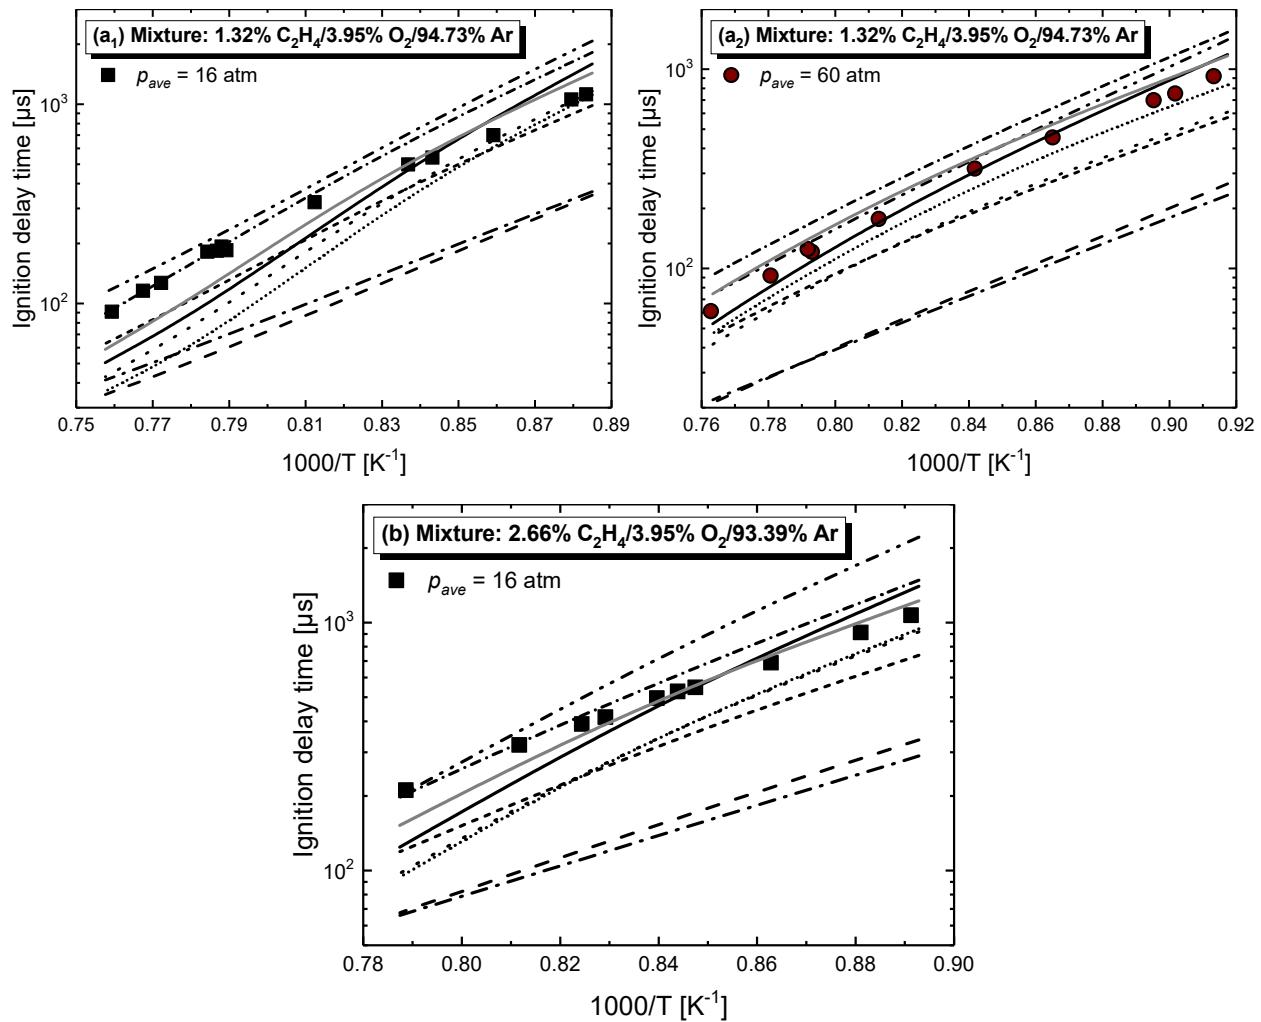

Figure S13: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

1.1.14 Baigmohammadi et al. experimental data[14]

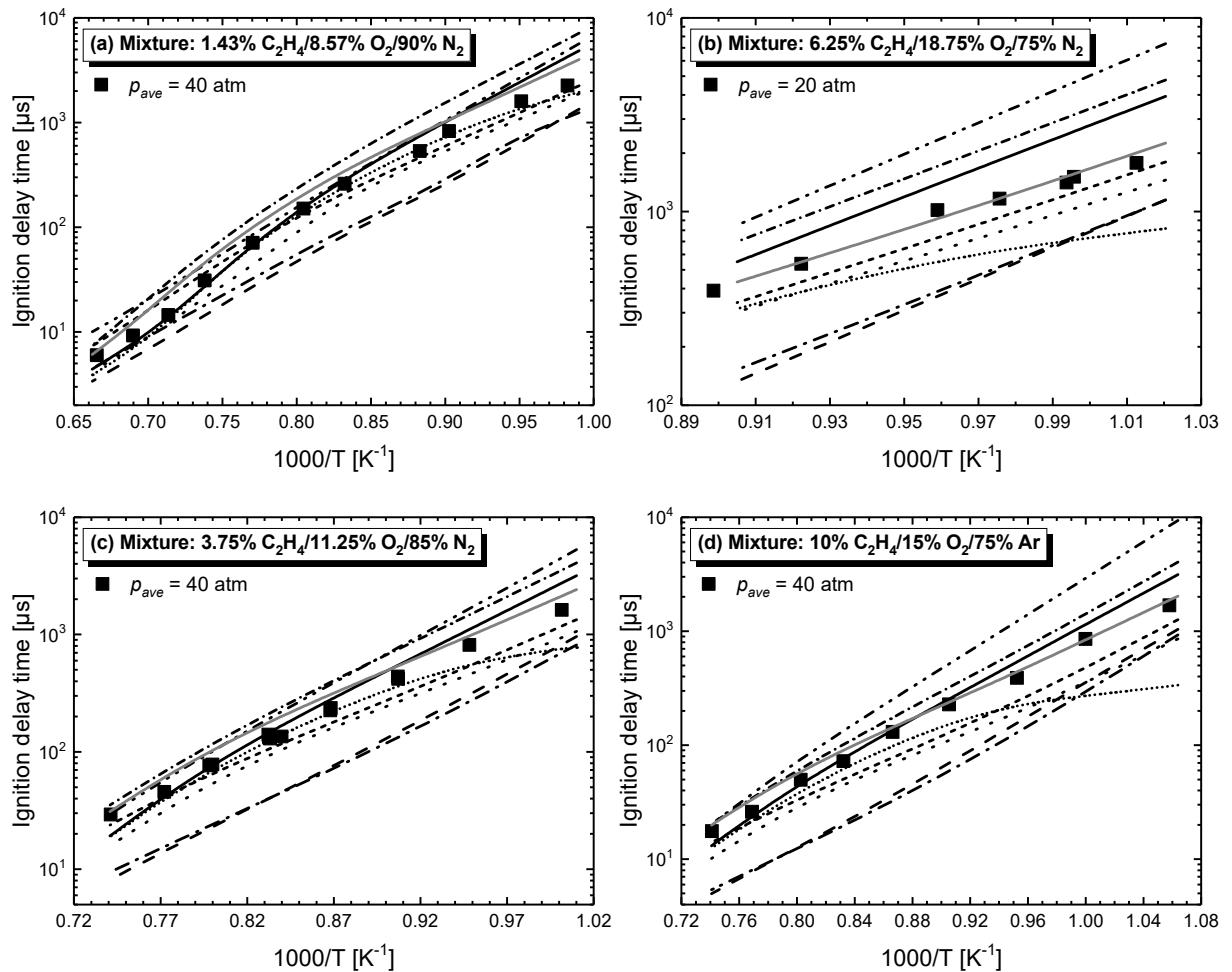

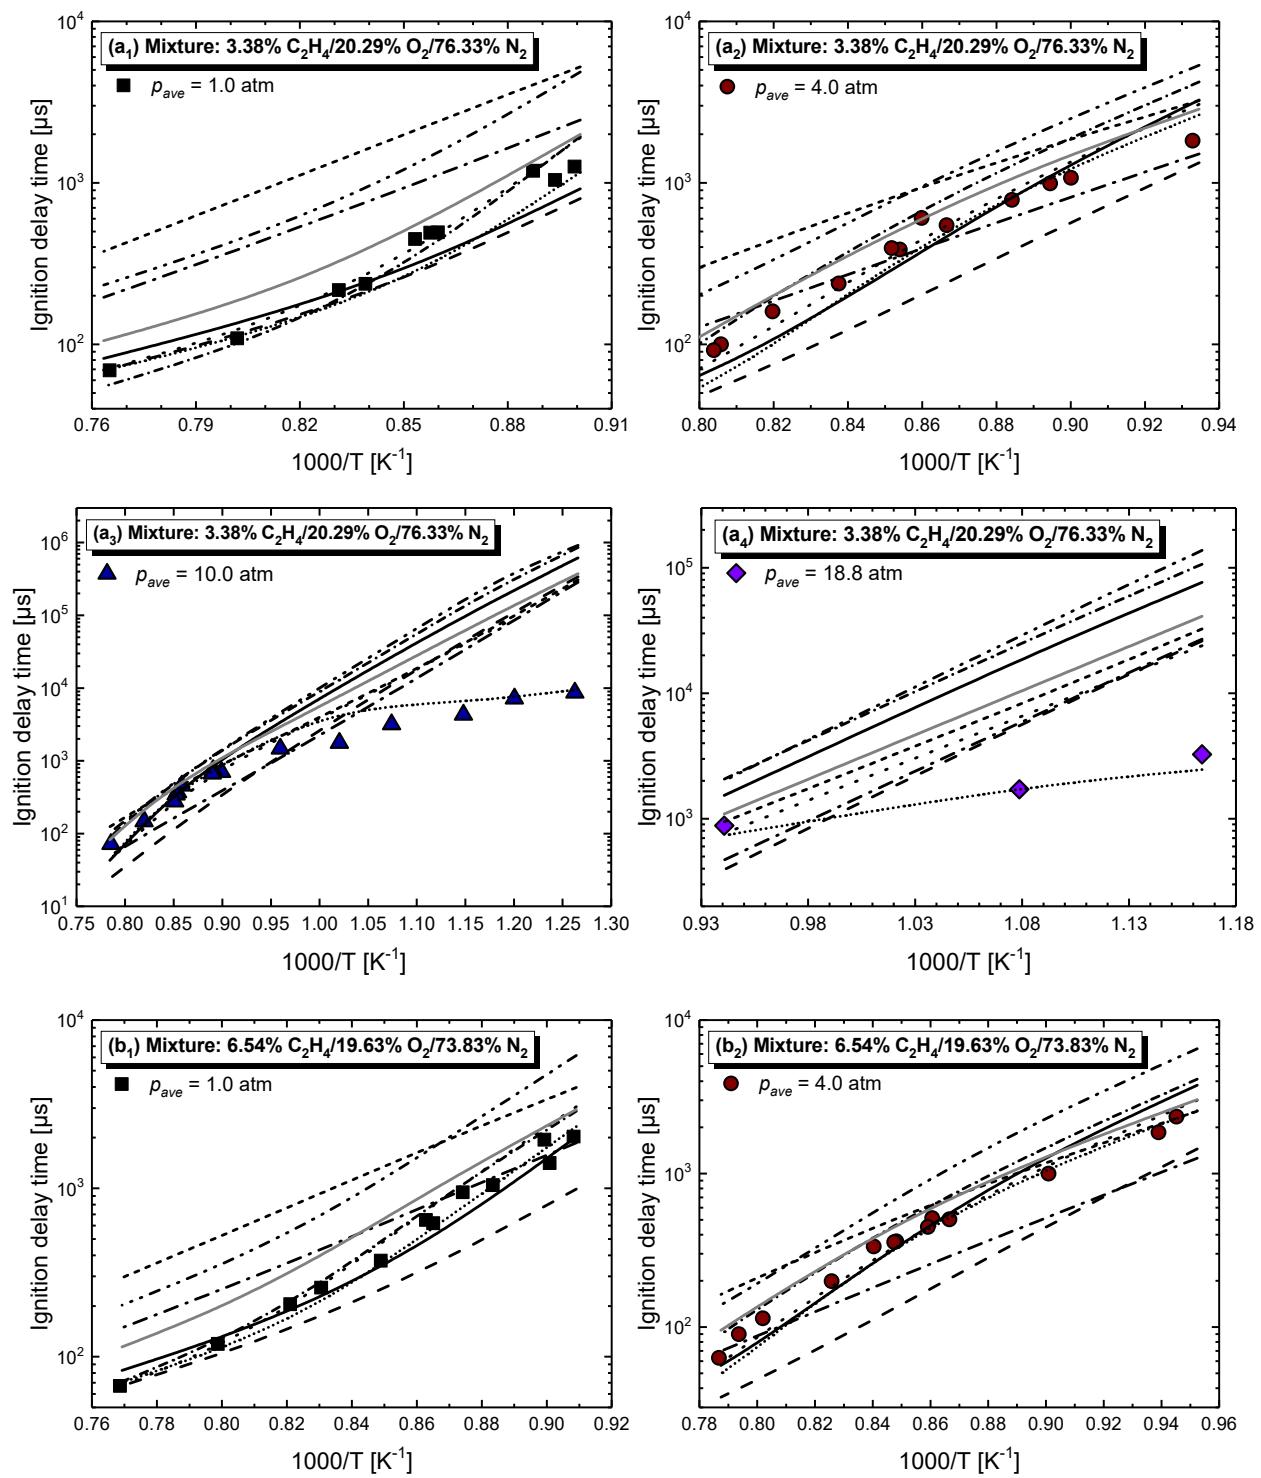

Figure S14: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

1.1.15 Yang et al. experimental data[15]

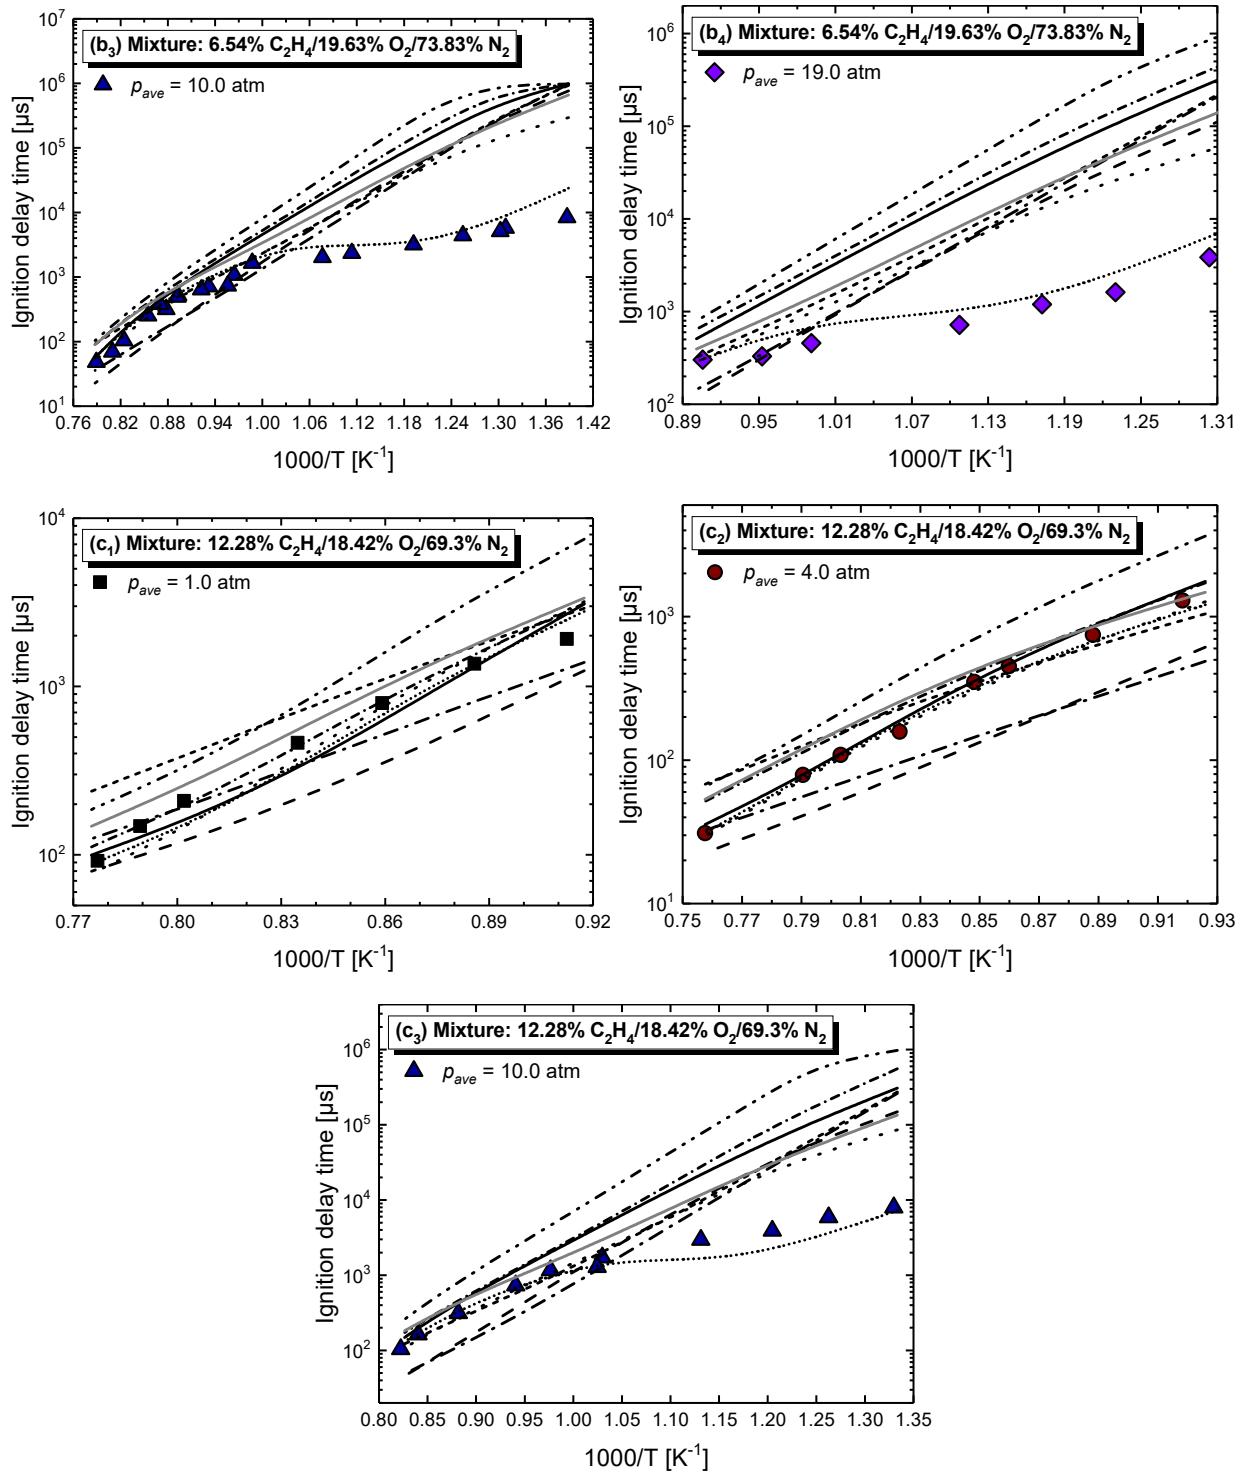

Figure S15: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 1.1.16 Xiong et al. experimental data[16]

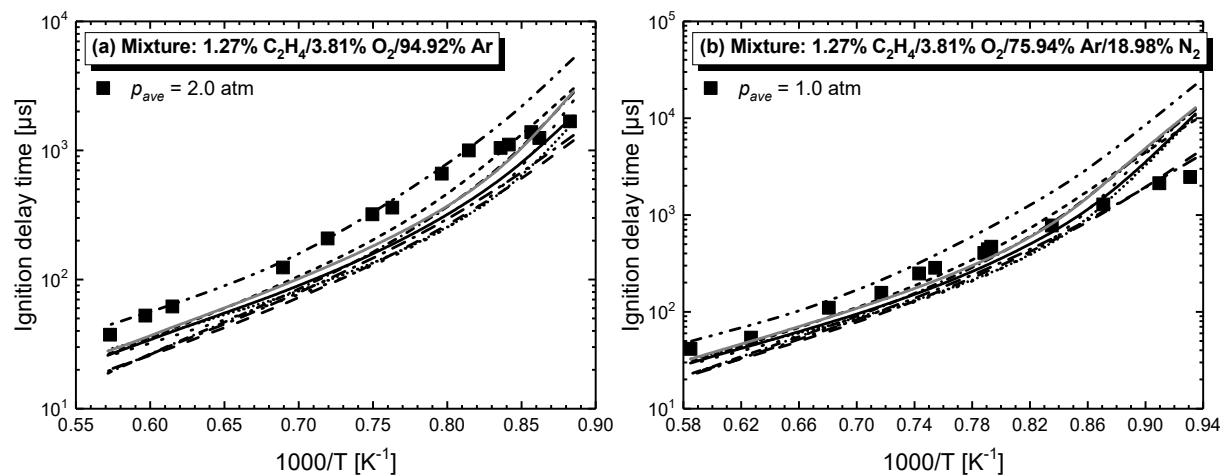

Figure S16: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 1.1.17 Dong et al. experimental data[17]

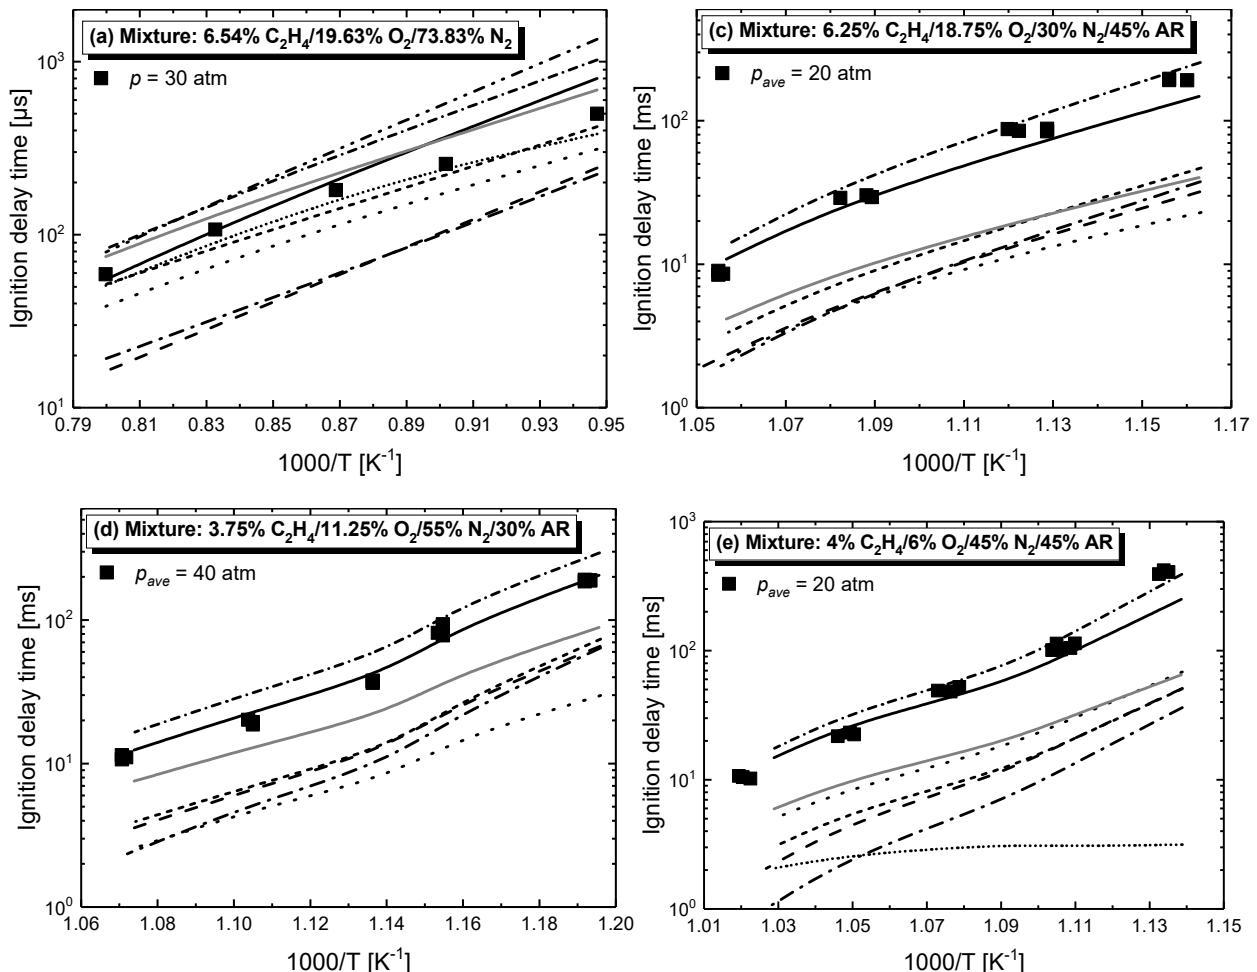

Figure S17: Shock tube ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

## 1.2 Rapid compress machine ignition delay times of ethylene

### 1.2.1 Baigmohammadi et al. experimental data[14]

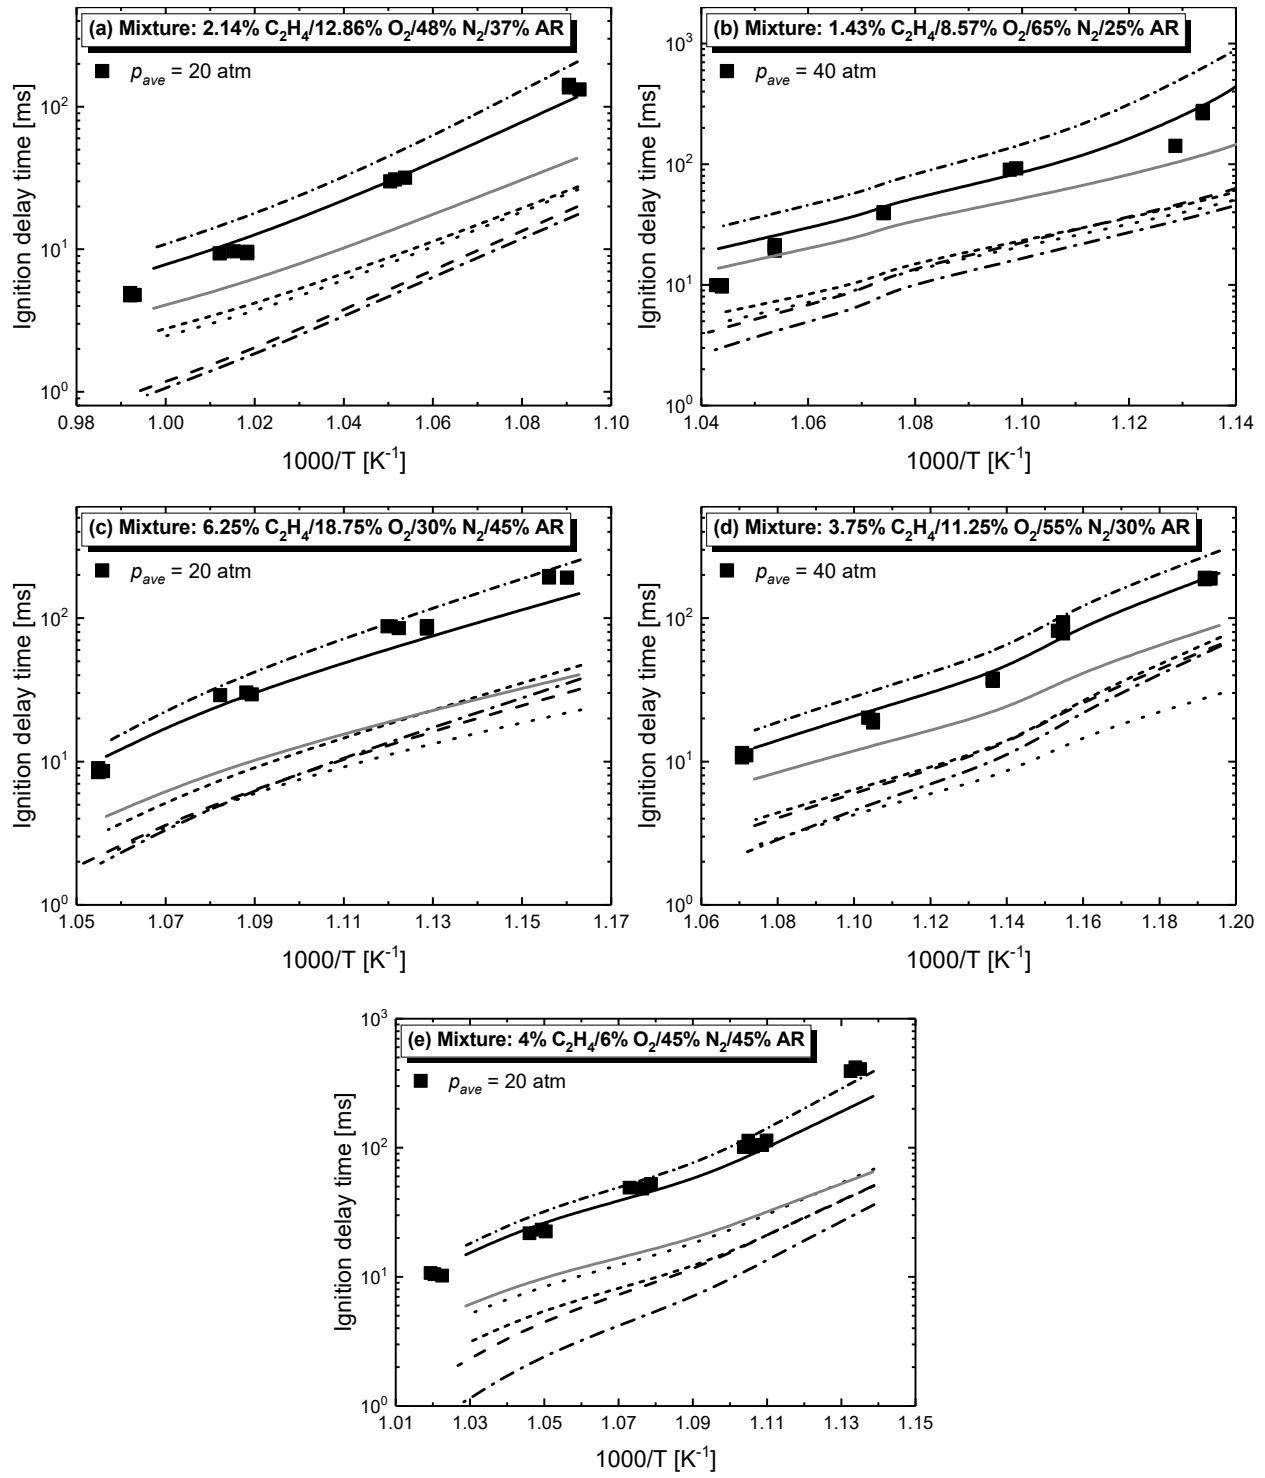

Figure S18: Rapid compress machine ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 1.2.2 Dong et al. experimental data[17]

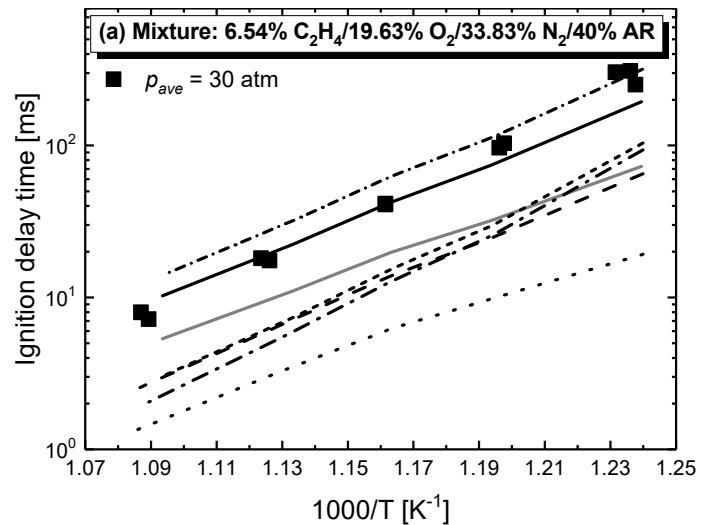

Figure S19: Rapid compress machine ignition delay times for ethylene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

## 2. Mechanism performance for propene

### 2.1 Shock tube ignition delay times of ethylene

#### 2.1.1 Burcat and Radhakrishnan experimental data[18]

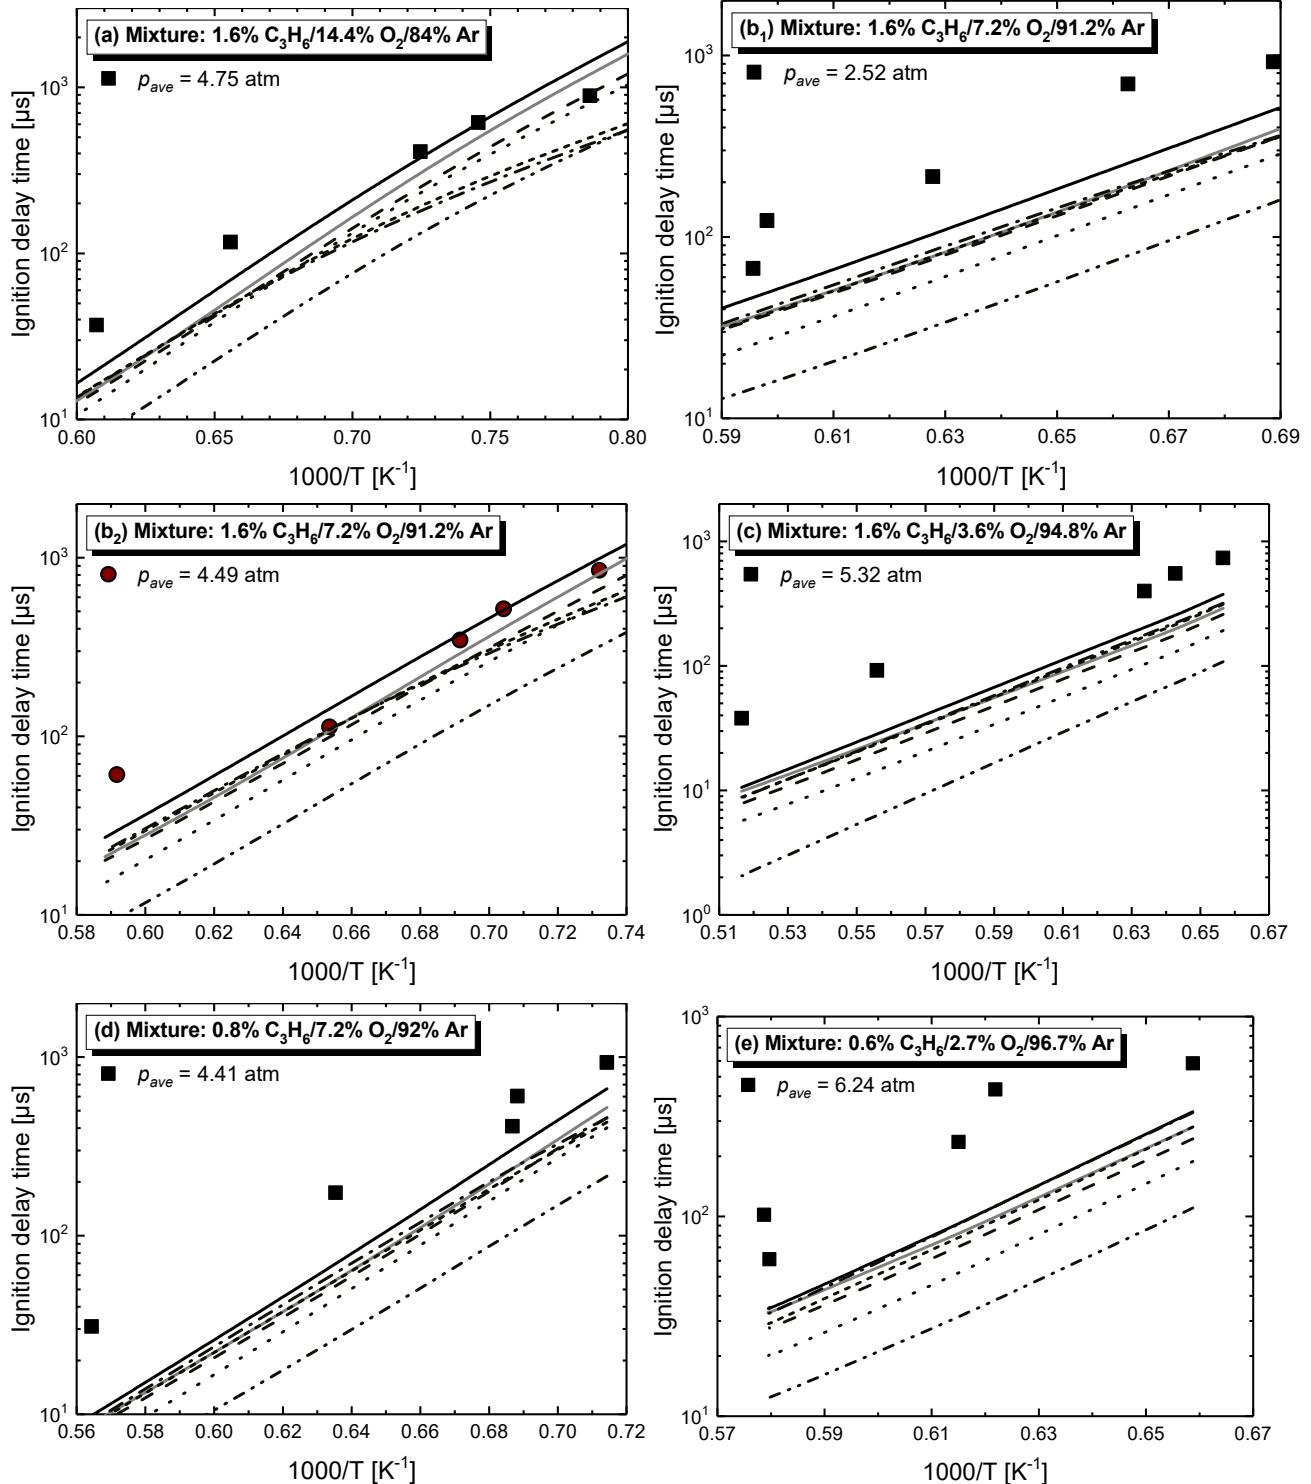

Figure S20: Shock tube ignition delay times for propene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 2.1.2 Qin et al. experimental data[19]

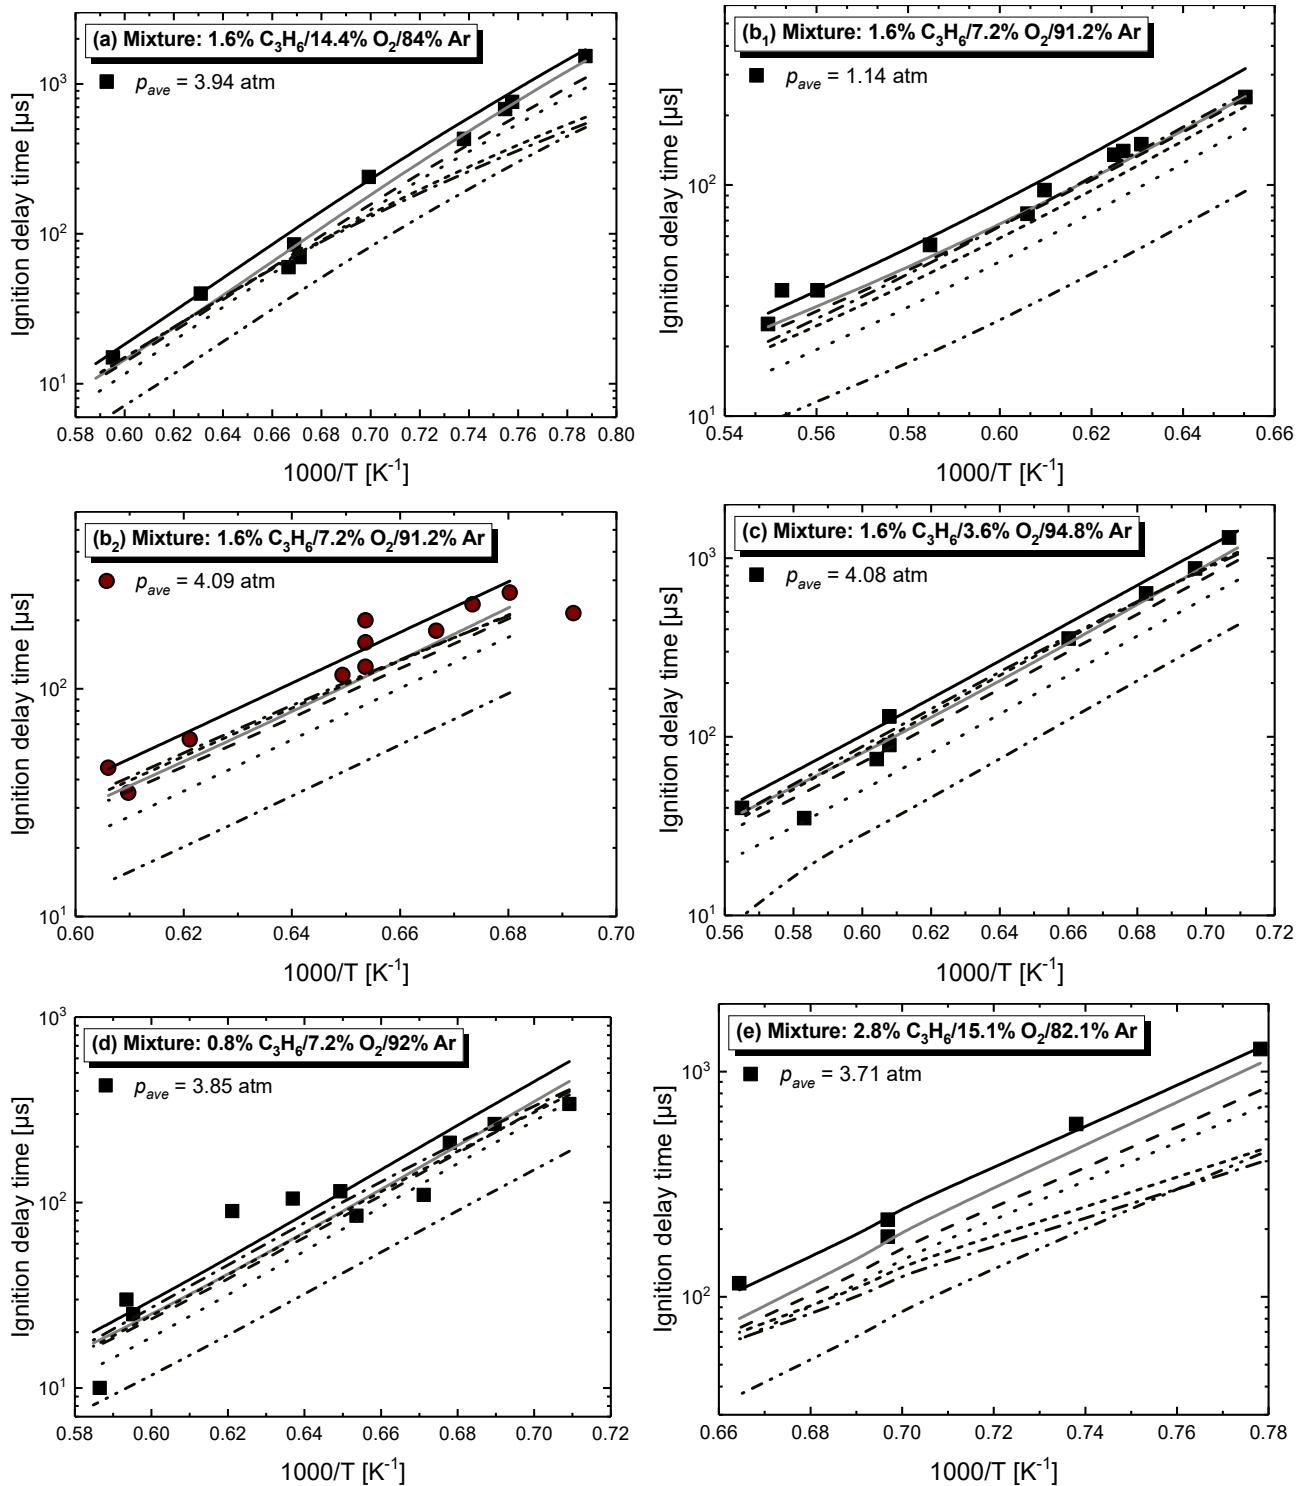

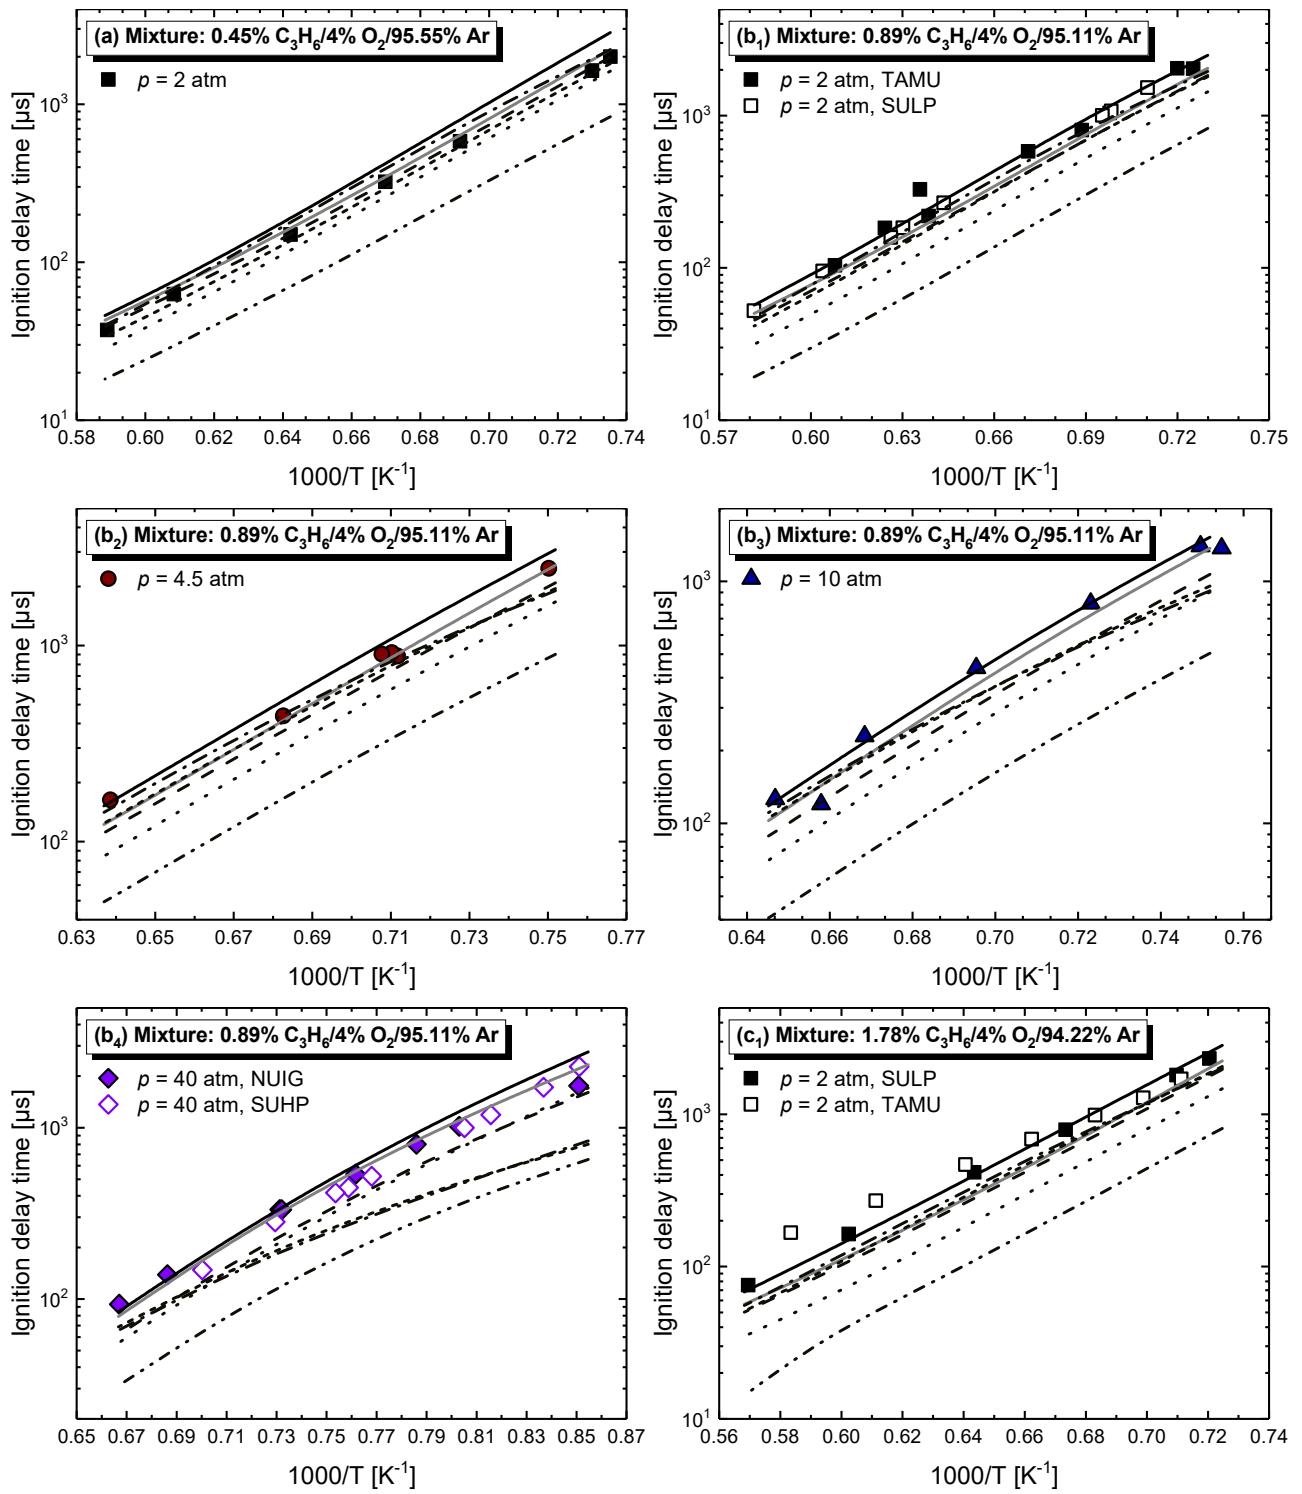

Figure S21: Shock tube ignition delay times for propene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 2.1.3 Burke et al. experimental data[20]

#### (1) Fuel in diluent

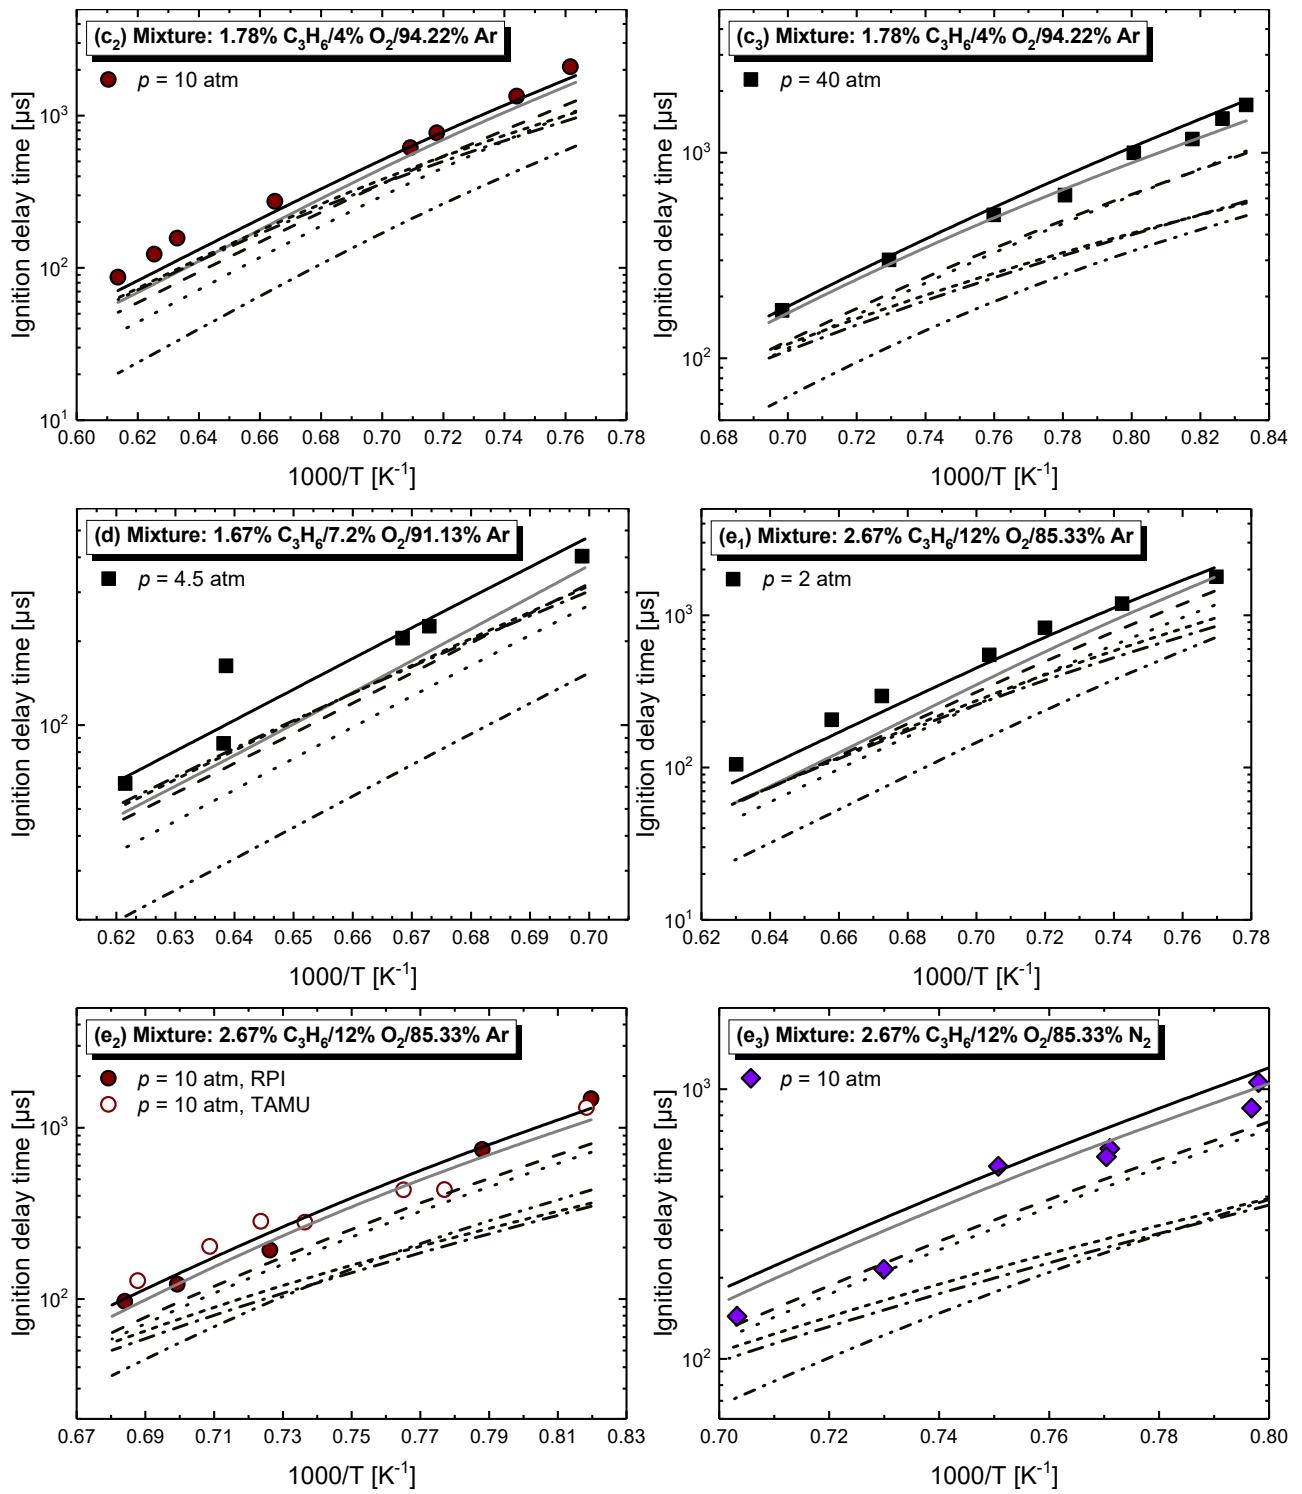

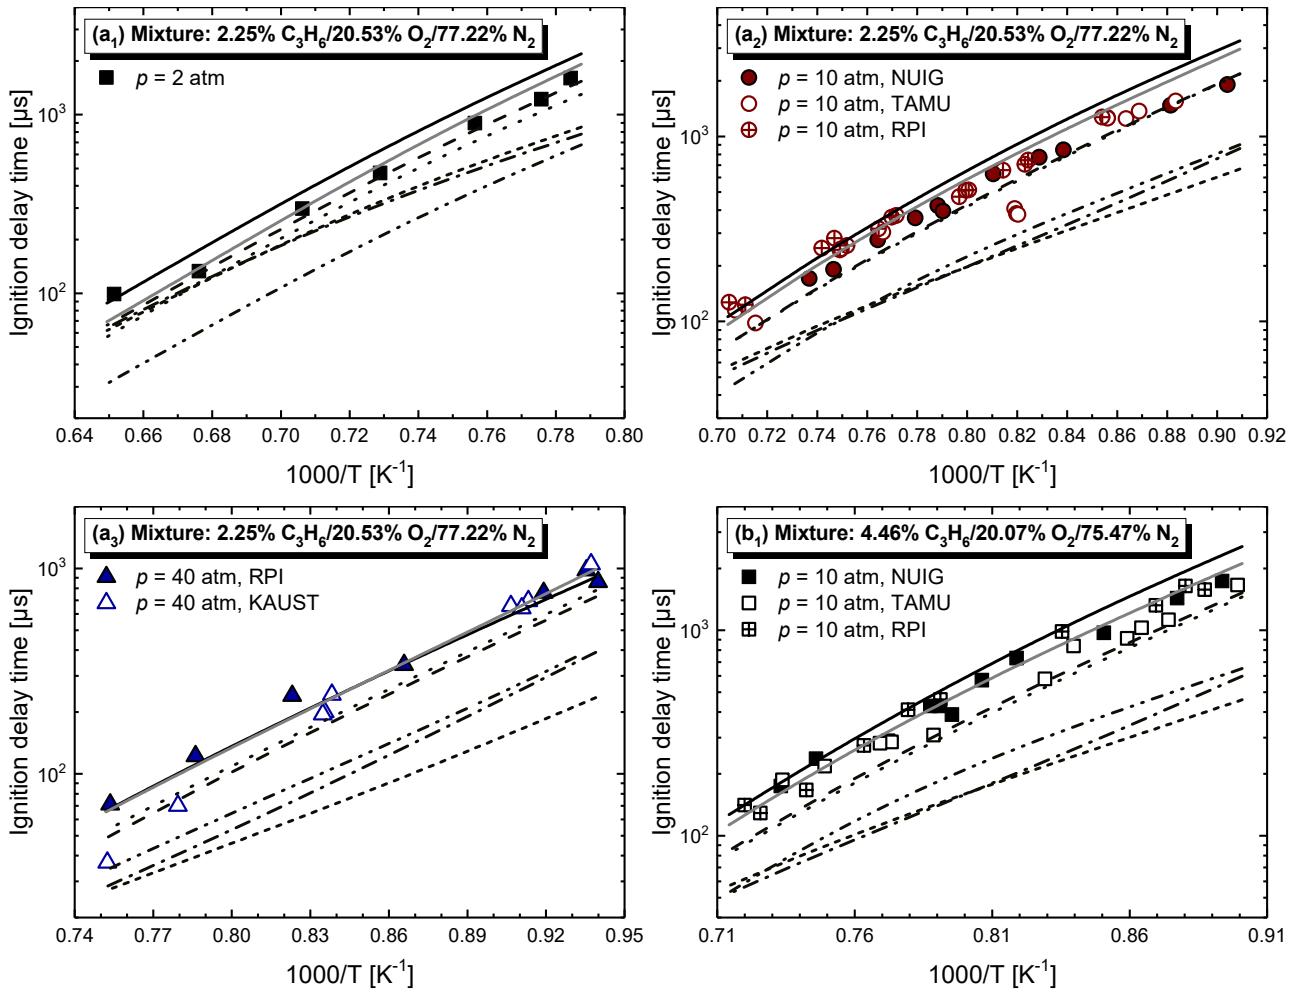

Figure S22: Shock tube ignition delay times for propene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

(2) Fuel in air

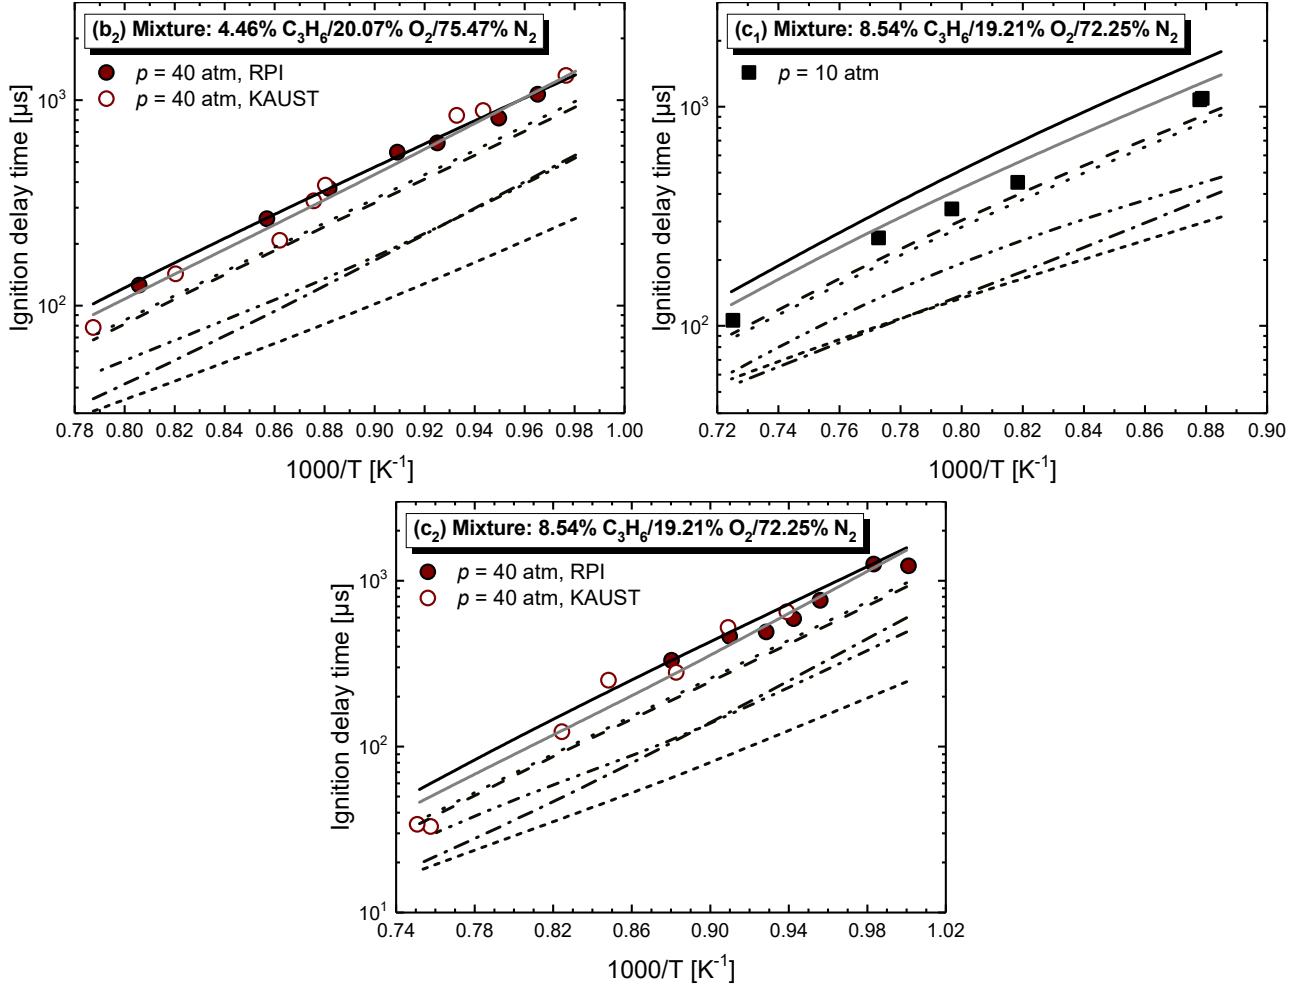

Figure S23: Shock tube ignition delay times for propene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

#### 2.1.4 Shao et al. experimental data[13]

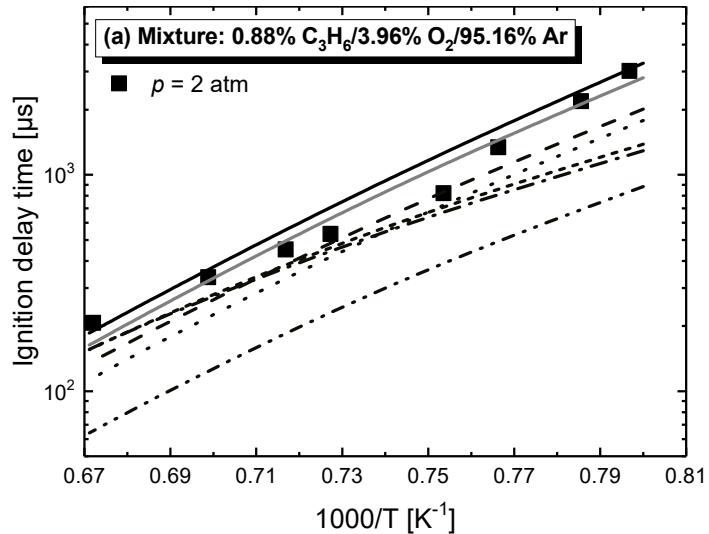

Figure S24: Shock tube ignition delay times for propene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 3. Mechanism performance for 1-butene

#### 3.1 Shock tube ignition delay times of 1-butene

##### 3.1.1 Heyberger *et al.* experimental data[21]

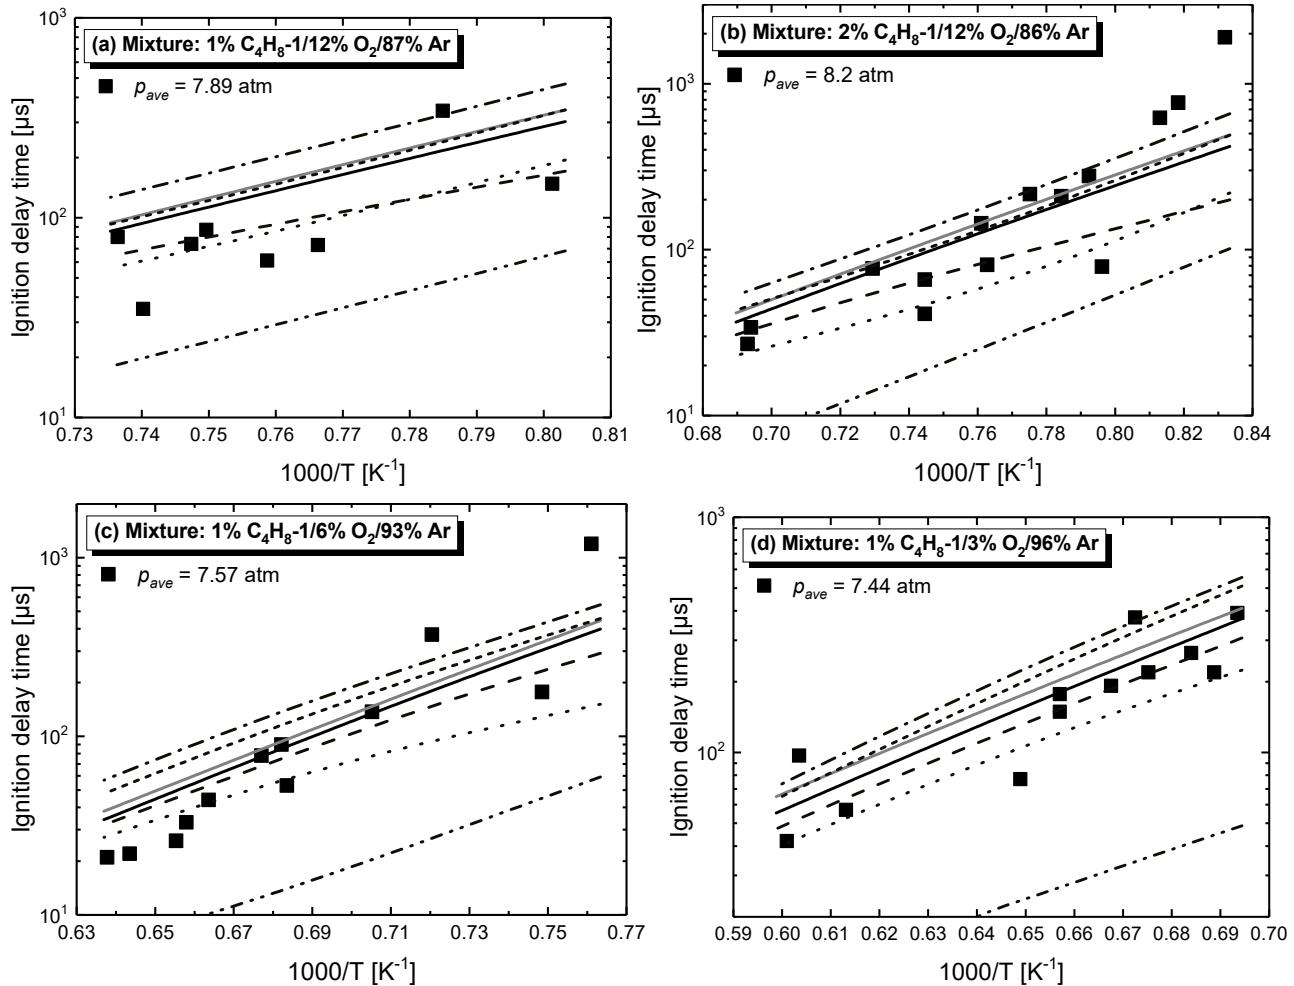

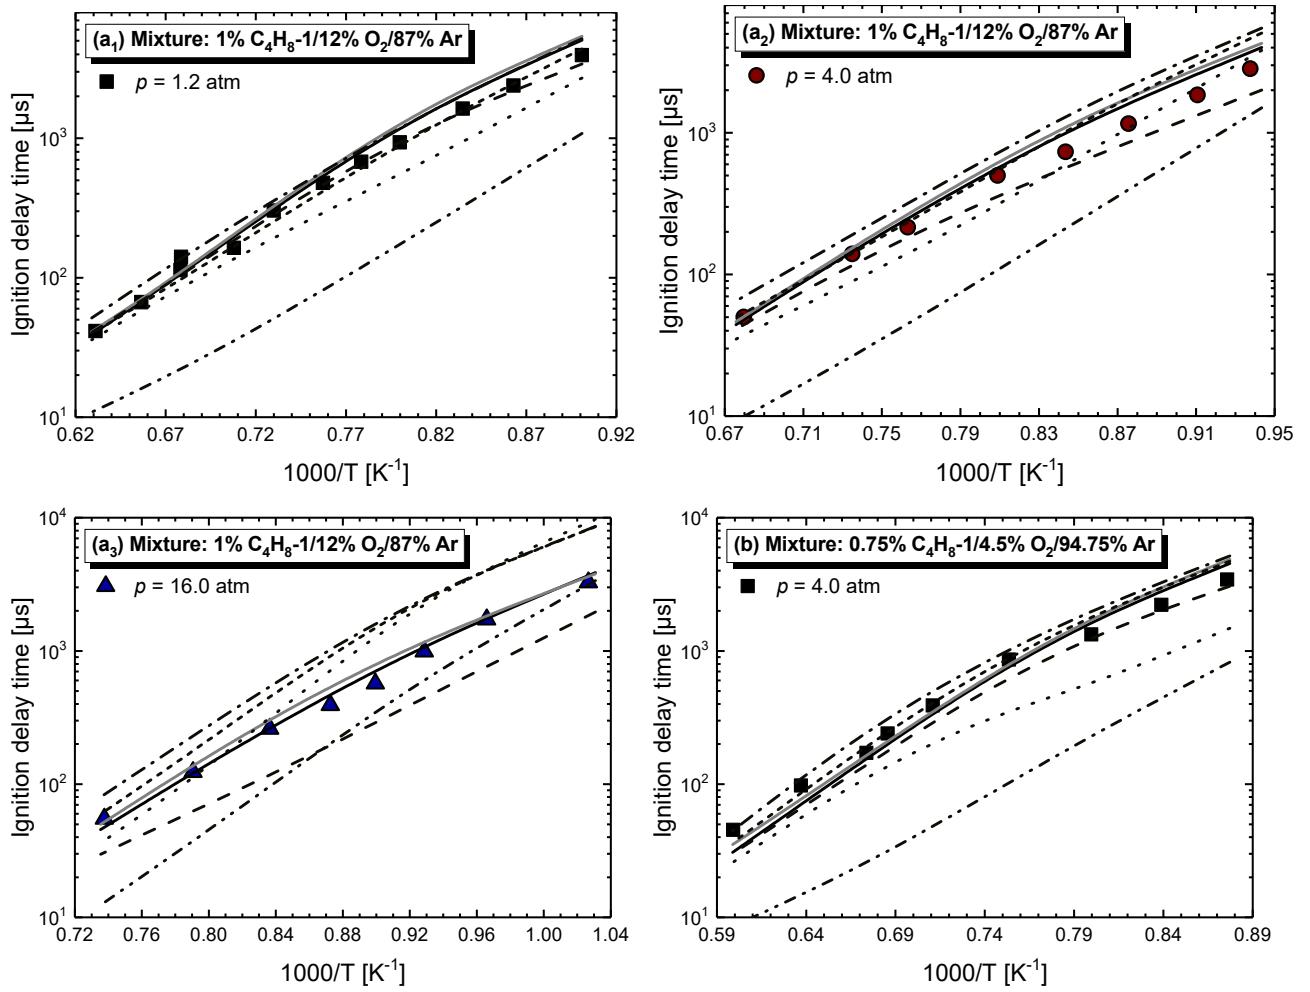

Figure S25: Shock tube ignition delay times for 1-butene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

3.1.2 Pan et al. experimental data[22]

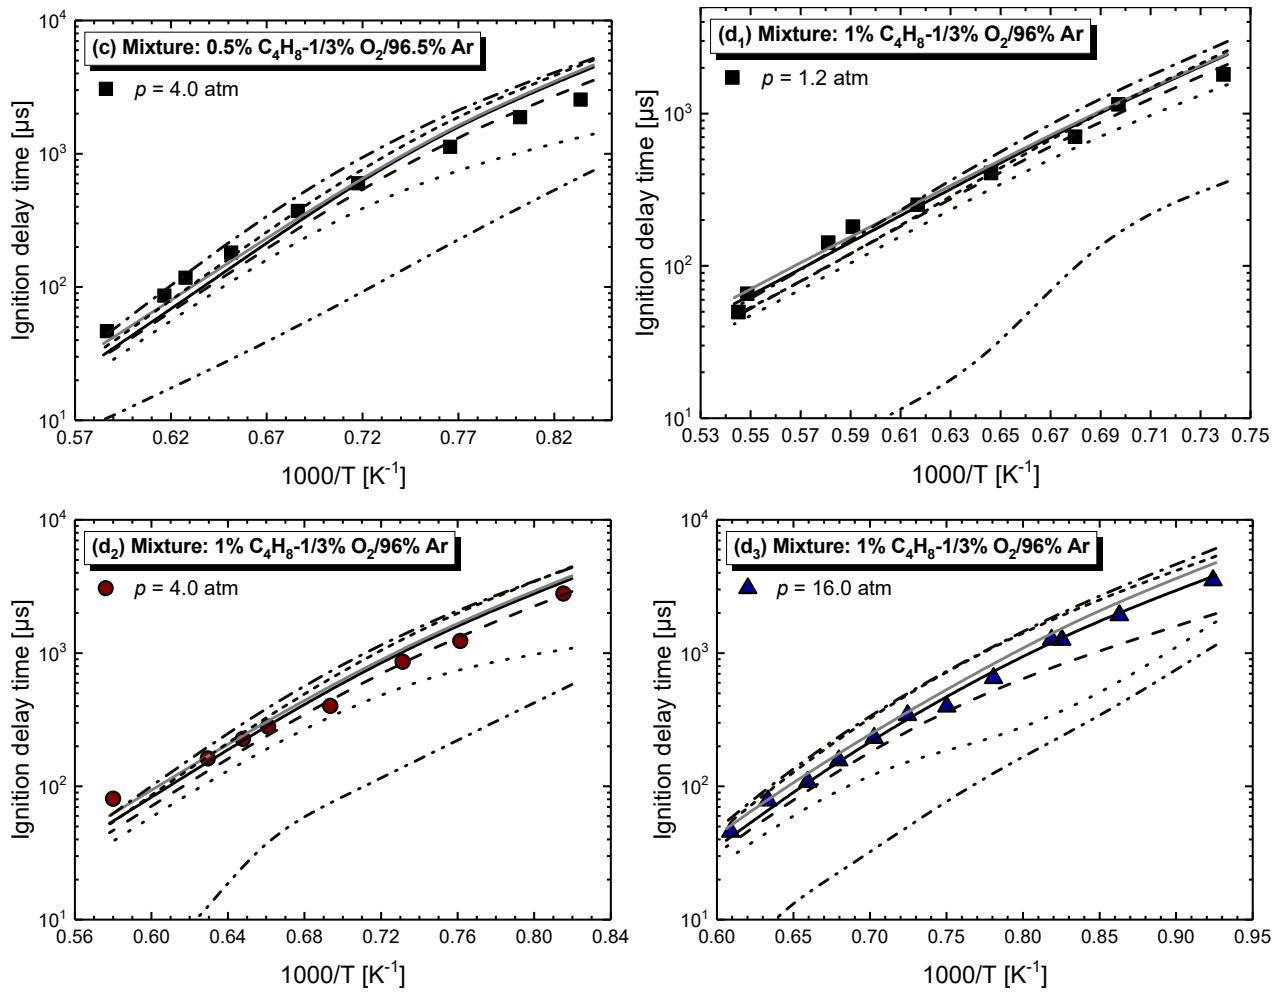

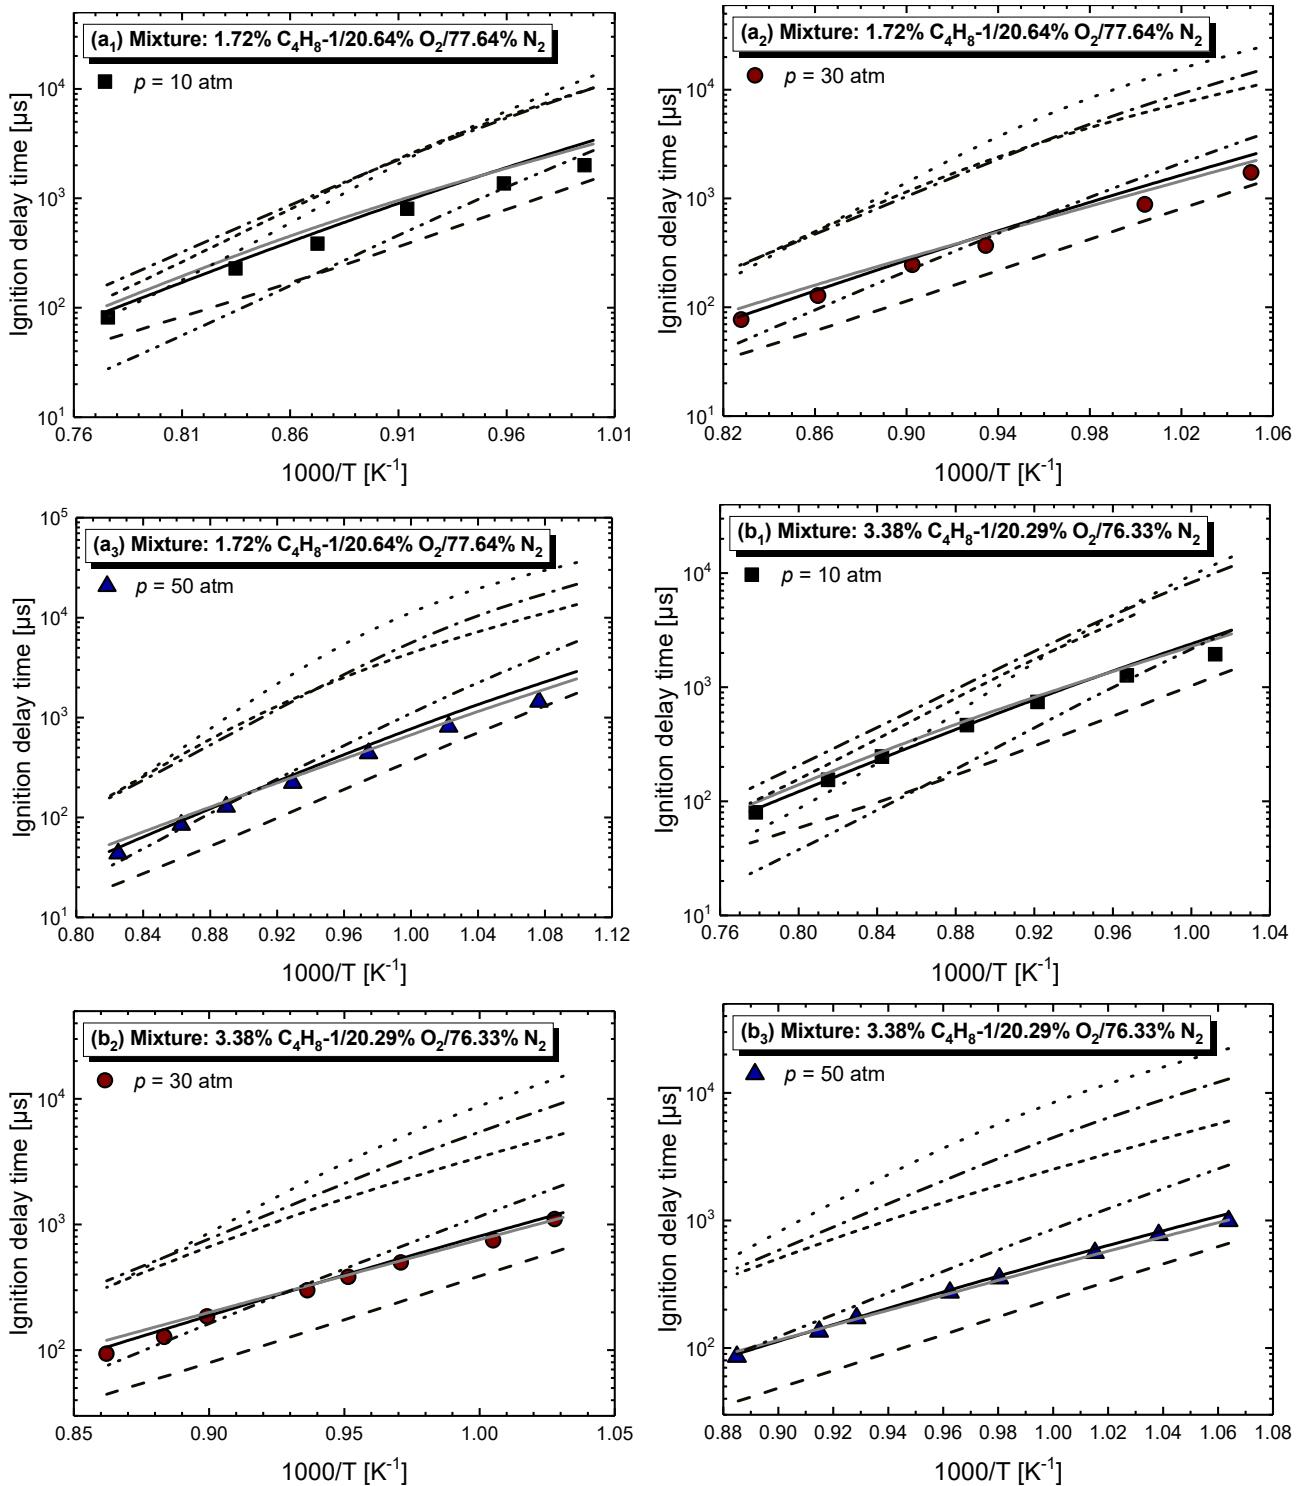

Figure S26: Shock tube ignition delay times for 1-butene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.

### 3.1.3 Li et al. experimental data[23]

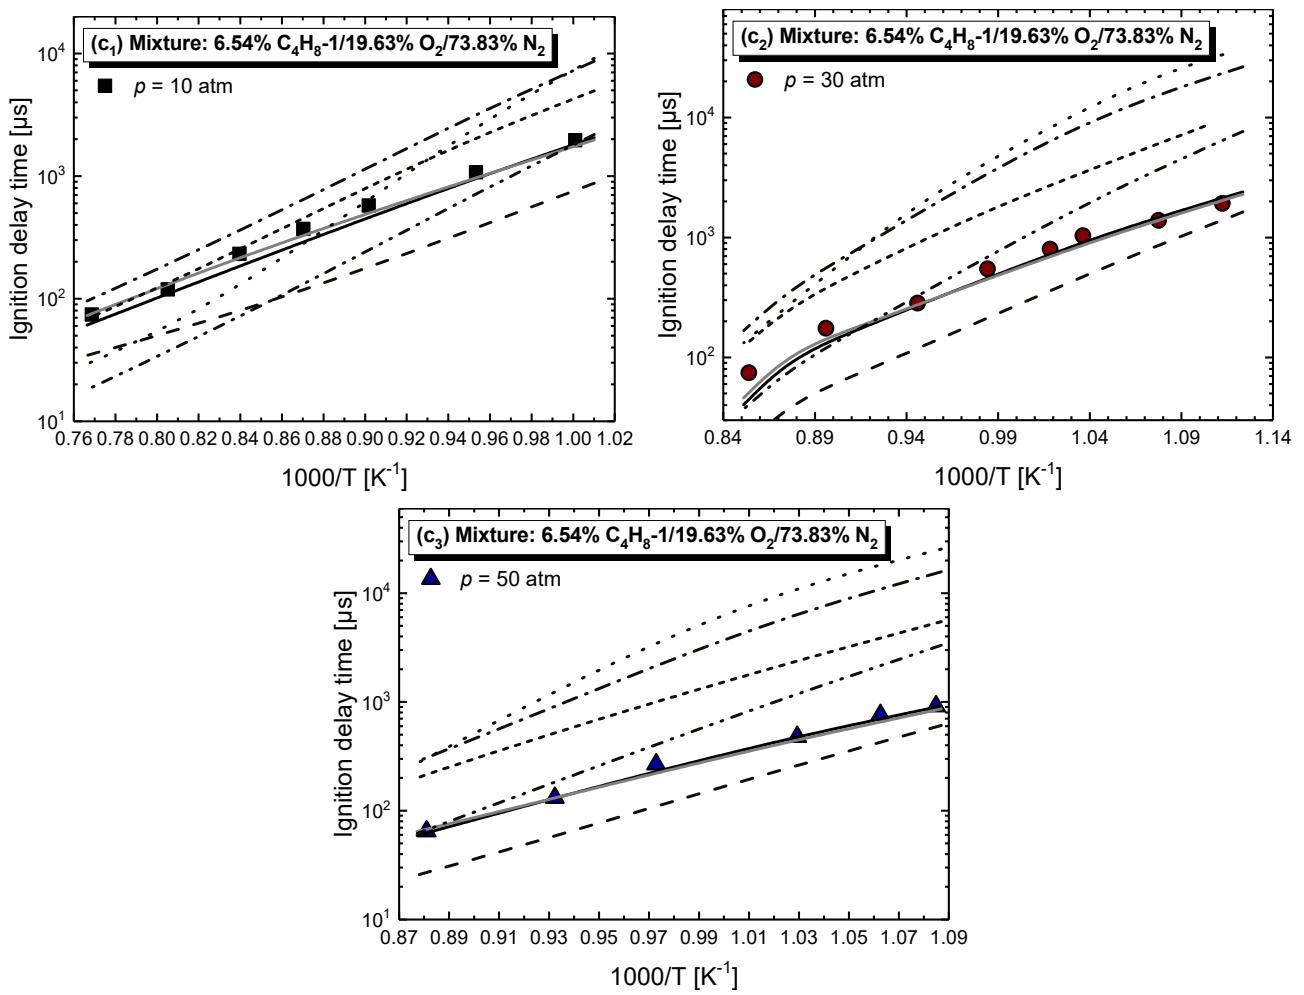

Figure S27: Shock tube ignition delay times for 1-butene mixtures. Symbols represent experimental data; lines denote model predictions with the selected mechanisms.
