

## SUPPLEMENTARY MATERIAL

**Figure S1.** (a) Photosynthetic active radiation (PAR, mmol photons m<sup>-2</sup> s<sup>-1</sup>); (b) relative air humidity (RH, %); (c) Vapour Pressure Difference between leaf and air (VPD, mbar); (d) cuvette air temperature (Tcuv, °C), simultaneously measured with leaf-level gas exchanges. Vertical red dashed bars indicate the dates in which

the EDU treatments were applied. On the horizontal axis, the Day of Treatment is reported (0–75 = days from the last irrigation and R4, R14, R20, R27, days from rewetting of the water stressed mesocosms). For each measurement date, data are expressed as mean  $\pm$  Standard Error ( $9 < N < 30$ , see Supplementary Table S1).

**Figure S2.** (a) Net photosynthesis (Pn, mmolCO<sub>2</sub> m<sup>-2</sup> s<sup>-1</sup>); (b) stomatal conductance (gs, mmol H<sub>2</sub>O m<sup>-2</sup> s<sup>-1</sup>); (c) Ci/Ca ratio (dimensionless); (d) leaf transpiration (E, mmol H<sub>2</sub>O m<sup>-2</sup> s<sup>-1</sup>), measured during the experimental period. Vertical red dashed bars indicate the dates in which the EDU treatments were applied. On the horizontal axis, the Day of Treatment is reported (0–75 = days from the last irrigation and R4, R14, R20, R27, days from rewetting of the water stressed mesocosms). For each measurement date, data are expressed as mean ± Standard Error (9 < N < 30, see Supplementary Table S1).

**Table S1.** Average ± SE values of gas exchanges (Figure 3, Figure S2) and chlorophyll fluorescence parameters (Figure 4). For each sampling date and experimental set, the number of observations (N) is also reported.
