

## Supplementary Material.

**Figure S1. Effect of HHV-6 infection on the ND10 complex.** (A) HHV-6A-GFP and mock infected JJHan cells were immunostained for PML (yellow) and analyzed by confocal microscopy. Virus infected cells express GFP (green) and nuclei were stained with DAPI (blue). Representative images are shown for mock and HHV-6A-GFP infected cells at 12, 24 and 48 hours post infection. The scale bars correspond to 3 $\mu$ m.

**Figure S2.** Schematic image describes the construction of HHV-6A-U57-p2A-GFP BAC upon *en passant* mutagenesis.
