

Figure S1. The Neighbor-joining (NJ) phylogenetic trees constructed on the RNA-dependent RNA polymerase (*RdRp*) and heat shock protein 70 (*HSP70*) gene nucleotide sequences of cucurbit chlorotic virus (CuCV), cucurbit yellow stunting disorder virus (CYSDV) and the representative members of the genus *Crinivirus*, family *Closteroviridae*. The newly identified viruses in this study are indicated by red dots.
