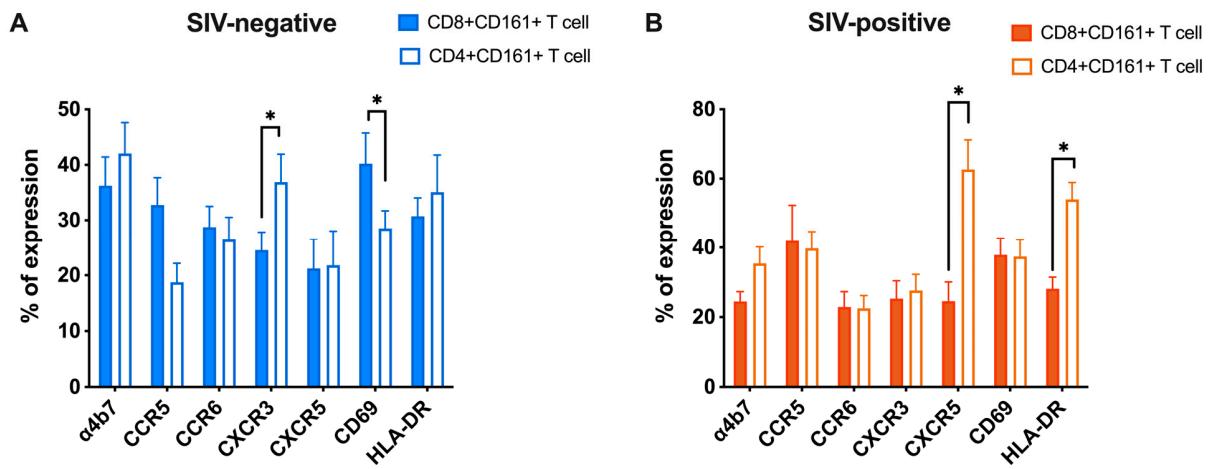

Figure S1. Difference between CD161⁺CD8⁺ T and CD161⁺CD4⁺ T cell expression of trafficking and activation markers within SIV-negative and SIV-positive groups. Comparison of frequencies of trafficking markers ($\alpha 4\beta 7$, CCR5, CCR6, CXCR3, and CXCR5) and activation markers (CD69 and HLA-DR) between CD161⁺CD4⁺ T cells and CD161⁺CD8⁺ T cells within (A) SIV-negative group and (B) SIV-infected group of macaques are shown for PBMC isolated from 13 SIV-negative macaques and 11 chronic SIV-infected macaques. Error bars show mean and SEM for each group. Groups were compared using Wilcoxon matched-pairs signed-rank test. Asterisks indicate significant differences between the groups (*p < 0.05).

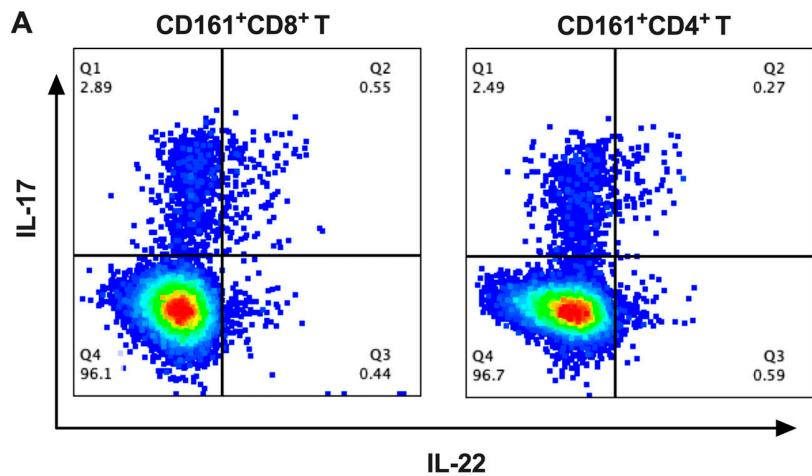

Figure S2. Flow cytometry plots showing CD161⁺ T cell subsets expressing IL-17 and/or IL-22 in a SIV-infected macaque. Intracellular cytokine staining for IL-17 and IL-22 cytokines was carried out on CD161-expressing T cells and evaluated by gating on CD161⁺ CD8⁺ T cells and CD161⁺CD4⁺ T cells.

Supplementary Table S1. Antibodies for Flow Cytometric Analysis.

Antibody	Fluorochrome	Vendor	Clone	Catalog #
