Supplementary Materials: DNA Damage Reduces the Quality, but Not the Quantity of Human Papillomavirus 16 E1 and E2 DNA Replication

Molly L. Bristol, Xu Wang, Nathan W. Smith, Minkyeong P. Son, Michael R. Evans and Iain M. Morgan

Figure S1. Representative FACS analysis of etoposide dose response. C33a cells were plated; Varying doses of etoposide were added to adherent C33a cells (500 nM, 1 µM, 5 µM, 10 µM, 25 µM, 100 µM) 24 hours post plating. 48 hours after the addition of etoposide, cells were harvested and analyzed via FACS.
